Acknowledgments

This volume represents the efforts of many current and former staff members of the Industry Economics Division, working under the direction of Sumiye Okubo, Associate Director for Industry Accounts; Ann M. Lawson, Chief of the Division; Belinda L. Bonds, Chief of the Goods Branch; Karen J. Horowitz, Chief of the Services Branch; and Mark A. Planting, Chief of the Auxiliary Studies Branch. Brian D. Kajutti designed the data processing system and coordinated the computer programming and processing, and John Turner prepared the summary and detailed tables.

Ann Lawson directed the preparation of the volume and authored the summary and detailed series text. Karen Horowitz, with assistance from Belinda Bonds, Tara L. O'Brien, Alexandra E. Karaer, and Charlita R. Fickus, prepared "Appendix C: Measures of Output," "Appendix D: Products Included in Personal Consumption Expenditure Categories," and "Appendix E: Products Included in Producers' Durable Equipment Expenditure Categories."

Other staff contributors from the Industry Economics Division were William A. Allen, Timothy D. Aylor, Alvin D. Blake, Felicia V. Candela, Michael C. Craw, Sergio Delgado, Carole Henry, Thuy Hia, David Huether, Myles J. Levin, Sherlene K. S. Lum, Fritz Mayhew, William McCarthy, Donna McComber, Cheryl Miner, Edward T. Morgan, Brian C. Moyer, Diane E. Nisson, Robert S. Robinowitz, Darlene C. Robinson, Mary L. Roy, Timothy F. Slaper, John Sporing, Robert A. Sylvester, Diane Young, and Robert E. Yuskavage.

Members of the staff of the National Income and Wealth Division under the direction of Leon W. Taub, former Chief, and the staff of the Government Division under the

direction of Karl D. Galbraith, Chief, contributed to the development of the estimates; major contributors were Brooks B. Robinson, Jeffrey W. Crawford, Pamela A. Kelly, Greg M. Key, Clinton P. McCully, Carol E. Moylan, and David F. Sullivan.

Members of the staff of the International Investment Division under the direction of David R. Belli, Chief, and members of the staff of the Balance of Payments Division under the direction of Christopher L. Bach, Chief, assisted in the preparation of the foreign trade estimates.

Estimates for transportation were prepared with the assistance of Bingsong Fang, Xiaoli Han, and Simon Randrianarivelo from the Bureau of Transportation Statistics, U.S. Department of Transportation. Estimates for agriculture were prepared with the assistance of Gerald Schluter and William E. Edmondson from the Economic Research Service, U.S. Department of Agriculture.

Eric B. Manning, under the direction of Douglas R. Fox, Chief of the Current Business Analysis Division, coordinated the production of the publication and provided typesetting. W. Ronnie Foster designed the cover graphic.

A special acknowledgment is made to the staff of the Bureau of the Census, particularly to those in the Agriculture and Financial Statistics Division under the direction of Ewen M. Wilson, Chief; in the Manufacturing and Construction Division under the direction of David Cartwright, former Chief; and in the Services Division under the direction of Carol Ambler, Chief. Without their cooperation and assistance, the publication of the 1992 benchmark input-output accounts on a more timely basis would have been impossible.

Introduction

This publication presents the 1992 benchmark input-output (I-O) accounts for the U.S. economy. It provides the estimates for both the summary (that is, at the I-O two-digit level) and the detailed (I-O six-digit level) industries and commodities in one publication. It also provides information on the uses of I-O accounts and on the methods underlying them.

Organization of the publication

The text consists of two parts and six appendixes. The first part of the text combines the text of the article "Benchmark Input-Output Accounts for the U.S. Economy, 1992: Make, Use, and Supplementary Tables," which appeared in the November 1997 issue of the SURVEY OF CURRENT BUSINESS, with that of the article "Benchmark Input-Output Accounts for the U.S. Economy, 1992: Requirements Tables," which appeared in the December 1997 SURVEY. This part describes the preparation of the 1992 I-O accounts and some of the improvements made to the tables, the concepts and methods underlying the U.S. I-O accounts, and how the I-O accounts are used. It also includes supplementary tables that relate the I-O accounts to the national income and product accounts (NIPA's); these tables permit more extensive analysis with the I-O estimates. The second part of the text describes how to read the detailed tables, which appear in the general format that was used for the publication *Benchmark Input-Output Accounts of the United States, 1987*.

The text also presents the two appendixes that previously appeared in the November 1997 SURVEY. Appendix

A provides a concordance between the codes used in the I-O accounts and the 1987 Standard Industrial Classification (SIC) system, and appendix B provides a list of the value-added and final-use components that are included in the I-O accounts. This volume includes four additional appendixes: Appendix C, which describes the measures of output; appendixes D and E, which list the products included in the NIPA personal consumption expenditure (PCE) and producers' durable equipment (PDE) expenditure categories, respectively; and appendix F, which provides the mathematical derivation of the I-O total requirements tables.

The tables presenting the 1992 I-O benchmark estimates are divided into two complementary parts. The first part presents the summary estimates as they were presented in the November and December issues of the SURVEY. The second part presents the corresponding detailed estimates. It provides the I-O estimates for the make and use tables and the estimates of the total output requirements from industries and commodities to meet demand, as well as the 15 largest industries or commodities and their contributions to meeting that demand for a commodity. It also contains detailed estimates for I-O commodity composition of the NIPA PCE and PDE categories.

All estimates developed for the 1992 benchmark I-O study are available on diskette (see the box "Data Availability" on page M-3). For other assistance, contact the Industry Economics Division at (202) 606-5584, or write to the Industry Economics Division, BE-51, Bureau of Economic Analysis, U.S. Department of Commerce, Washington D.C. 20230.

Overview, Framework, and Summary Accounts

The I-O accounts show the production of commodities (goods and services) by each industry, the use of commodities by each industry, the commodity composition of gross domestic product (GDP), and the industry distribution of value added. These I-O accounts are used in a variety of analytical and statistical contexts, including in studies of interindustry relationships within the economy and as the framework and benchmarks for other statistical accounts.

This publication presents the 1992 benchmark I-O accounts for the U.S. economy.¹ This part of the publication is in two sections. The first section describes the preparation of the 1992 I-O accounts and discusses some of the improvements that have been made. The second section describes the I-O tables, illustrates how they are used, and discusses the concepts and methods underlying the I-O accounts.

The 1992 I-O estimates are presented in this part in summary form; that is, they are aggregated to 97 I-O industries from 498-industry detail. The make (production) of commodities by industries is shown in table 1; the use (consumption) of commodities by industries, in table 2.1; and the components of value added by industries, in table 2.2. The commodity-by-industry direct requirements for a dollar of industry output are shown in table 3.1, and the component detail for the value-added input coefficients in table 3.2. The commodity-by-commodity total requirements, direct and indirect, for a dollar of delivery to final use are shown in table 4. The industry-by-commodity total requirements, direct and indirect, for a dollar of delivery to final use are shown in table 5. These tables are available at the summary and detailed levels on diskette (see the box "Data Availability" on page M-3).

This part also presents supplementary tables that link the I-O accounts to the national income and product accounts (NIPA's).² These tables permit more extensive analyses with the I-O estimates.

1. Earlier benchmark I-O accounts covered 1947, 1958, 1963, 1967, 1972, 1977, 1982, and 1987. The 1987 I-O accounts were presented in the April and May 1994 issues of the *SURVEY OF CURRENT BUSINESS*.

2. The 1992 I-O estimates will be incorporated into the NIPA's during the next comprehensive NIPA revision. See Leon W Taub and Robert P. Parker, "Preview of Revised NIPA Estimates for 1992 From the 1992 I-O Accounts," *SURVEY 77* (December 1997): 11-15.

The 1992 Benchmark I-O Accounts

In response to user needs—as expressed, for example, by the Interagency Working Group on the Quality of Economic Statistics—the Bureau of Economic Analysis (BEA) implemented a program to speed up the availability of benchmark I-O accounts.³ This goal was later formalized in BEA's Strategic Plan, which was developed with data users and data suppliers in 1995. The Strategic Plan included making the benchmark I-O accounts available to users within five years of the date of an economic census or within one year after the release of all the data from that census, as part of the goal to develop new and improved measures of output and prices.⁴ The 1992 benchmark I-O accounts have met this goal.⁵

Source data and procedures

The benchmark I-O accounts are based primarily on data collected from the economic censuses conducted every five years by the Bureau of the Census. The economic censuses provide comprehensive data—including information on industry and commodity production, materials consumed, and operating expenses—that are not available on a more frequent basis. The 1992 benchmark I-O accounts used data from economic censuses of the following industries: Mining; manufacturing; wholesale trade; retail trade; transportation, communications, and utilities; finance, insurance, and real estate; and services. In addition, the I-O accounts used data from the 1992

4. See "Mid-Decade Strategic Review of BEA's Accounts: Maintaining and Improving Their Performance," *SURVEY 75* (February 1995): 36-66; "Mid-Decade Strategic Review of BEA's Economic Accounts: An Update," *SURVEY 75* (April 1995): 48-56; and "BEA's Mid-Decade Strategic Plan: A Progress Report," *SURVEY 76* (June 1996): 52-55.

5. The 1987 benchmark I-O accounts were released in the spring of 1994—seven years after the 1987 economic census and three years after the publication of the 1982 benchmark I-O accounts. To speed up the availability of the 1987 I-O accounts, BEA devised a set of procedures that captured the most important parts of the 1987 economic census data but abbreviated the process of assembling the wide variety of other non-census data needed to complete a full benchmark. The use of these abbreviated procedures to prepare the 1987 benchmark I-O accounts enabled BEA to more quickly turn its resources towards preparing a complete set of benchmark accounts for 1992.

Census of Agriculture, the 1992 Census of Construction Industries, and the 1992 Census of Governments.

In preparing the 1992 benchmark I-O accounts, BEA first estimated industry and commodity outputs for the I-O make and use tables. The industry and commodity outputs are represented by the shaded cells in the I-O make table, shown in the upper panel of chart 1, and in the I-O use table, shown in the lower panel. Where there are gaps in coverage by the economic censuses, BEA used data from other sources, such as the U.S. Department of Agriculture, U.S. Department of Energy, U.S. Department of Transportation, U.S. Department of Treasury, Office of Management and Budget, other Government agencies, and private organizations.

Second, BEA prepared estimates of the commodity inputs required by an industry to produce its output. In the use table shown in chart 1, commodity inputs are represented by the upper cells in an industry column. Most of the detailed data available to estimate commodity inputs are obtained from the economic censuses, which included selected purchased services for most industries and materials consumed for manufacturing. When only aggregate data were available, BEA combined that information (for example, purchases of fuel by manufacturing industries) with information on purchases of individual commodities (for example, purchases of petroleum products, natural gas, and coal in the category of purchased fuels) to estimate purchases of specific commodities by an industry (for example, purchases of natural gas by a manufacturing industry).

Third, BEA prepared estimates of value added by all industries. In the I-O accounts, value added consists of three components—compensation of employees, indi-

rect business tax and nontax liability, and “other value added”—which are represented by the lower cells in an industry column of the use table. To estimate compensation of employees and indirect business tax and nontax liability, BEA used data from the NIPA’s and from the Bureau of Labor Statistics, Bureau of the Census, Office of Management and Budget, and the U.S. Department of Treasury. BEA then derived other value added as a residual by subtracting total intermediate inputs, compensation of employees, and indirect business tax and nontax liability from total industry output.

Finally, BEA completed the estimates of detailed final-use categories. Most of the estimates of personal consumption expenditures and gross private fixed investment were prepared using the commodity-flow method.⁶ For example, using the commodity-flow method, office equipment for private investment was estimated as a residual after government investment was subtracted from the total supply of office equipment. The estimates of inventories held by industries were based primarily on economic census data; these estimates were then distributed to commodities based on information from the 1987 benchmark I-O accounts. The estimates of exports and imports of commodities were based on data from the Bureau of the Census and BEA’s U.S. balance of payments accounts. For the estimates of Federal Government and State and local government, total consumption and investment expenditures by type of purchase were obtained from the NIPA’s; these estimates were then distributed to I-O commodities based on information from

6. See the box “Personal Consumption Expenditures and Producers’ Durable Equipment” on page M-5.

Data Availability

The summary estimates and more detailed estimates for 498 industries at the I-O six-digit level, including a discussion of the matrix algebra underlying the derivation of the tables, are available on the following diskettes:

- The summary estimates for the make, use, and requirements tables, including estimates of make and use on an approximate 1987 Standard Industrial Classification (SIC) basis—product number NDN-0180, one diskette, for \$20.
- The estimates of make, use, and direct requirements at the I-O six-digit level—product number NDN-0178, three diskettes, for \$60.
- The alternative estimates of make and use on an approximate SIC basis at the I-O six-digit level—product number NDN-0179, two diskettes, for \$40.
- The estimates of industry-by-commodity total requirements at the I-O six-digit level—product number NDN-0183, one diskette, for \$20.

- The estimates of commodity-by-commodity total requirements at the I-O six-digit level—product number NDN-0184, one diskette, for \$20.

- The estimates of the I-O commodity composition of final demand in the national income and product accounts (NIPA’s) at the I-O six-digit level—product number NDN-0185, one diskette, for \$20.

- The estimates of the I-O commodity composition of NIPA personal consumption expenditures and producers’ durable equipment at the I-O six-digit level—product number NDN-0186, one diskette, for \$20.

To order these diskettes using MasterCard or Visa, call the BEA Order Desk at 1-800-704-0415 (outside the United States, call 202-606-9666). To order by mail, send a check payable to “Bureau of Economic Analysis, BE-53” to BEA Order Desk, Bureau of Economic Analysis, BE-53, U.S. Department of Commerce, Washington, DC 20230.

 TOTAL INDUSTRY OUTPUT

* The input-output (I-O) accounts use two classification systems, one for industries and another for commodities, but both generally use the same I-O numbers and titles. "Other" consists of government enterprises and other I-O special industries; for more information see "Appendix A: Classification of Industries in the 1992 Benchmark Input-Output Accounts."

** "Other value added" consists of the following national income and product accounts components of gross domestic income: Consumption of fixed capital, net interest, proprietors' income, corporate profits, rental income of persons, business transfer payments, and subsidies less current surplus of government enterprises.

the 1987 benchmark I-O accounts and the 1992 economic censuses.

Improvements and changes

The 1992 I-O accounts incorporated three types of changes: Definitional and classificational, to more accurately reflect the evolving U.S. economy; methodological, to increase the accuracy and reliability of the estimates; and statistical, to introduce newly available and revised source data.

Major definitional and classificational changes.—The 1992 I-O accounts incorporated the definitional changes that were introduced as part of the comprehensive NIPA revision released in January 1996.⁷ Of this type, the

7. See "Preview of the Comprehensive Revision of the National Income and Product Accounts: New and Redesigned Tables," SURVEY 75 (October 1995): 30–39. Also see "Improved Estimates of the National and Product

change that most affected the I-O accounts was the new treatment of government purchases that distinguishes between government investment and consumption expenditures and that is symmetrical with the treatment of private fixed assets.⁸

Accounts for 1959–95: Results of the Comprehensive Revision," SURVEY 76 (January/February 1996): 1–31.

8. The services of general government fixed assets, measured as depreciation, are now included in government consumption expenditures. However, the use of depreciation as a measure of the value of services of government fixed assets is only a partial measure of the total value. In theory, the service value of an asset should equal the reduction in the value of the asset due to its use during the current period (depreciation) plus a return equal to the current value the asset could earn if invested elsewhere (net return). The consumption of fixed capital by government does not provide an estimate of the full value of the services of government fixed assets, because the net rate of return on these assets is assumed to be zero. See Robert P. Parker and Jack E. Triplett, "Preview of the Comprehensive Revision of the National Income and Product Accounts: Recognition of Government Investment and Incorporation of a New Methodology for Calculating Depreciation," SURVEY 75 (September 1995): 33–41.

Personal Consumption Expenditures and Producers' Durable Equipment

The estimates of personal consumption expenditures (PCE) and producers' durable equipment (PDE) and the other components of final uses are presented in the input-output (I-O) accounts as purchases of commodities. In the presentation of PCE and PDE in the national income and product accounts (NIPA's), these commodities are grouped into categories either by type of product or by type of expenditure.¹ Two methods are used to prepare the I-O benchmark estimates of PCE and PDE: The direct estimation method and the commodity-flow method.

Direct estimation method

Selected commodities in the PCE and PDE categories are directly estimated from source data. Direct estimation is used when by definition the commodity is purchased only by persons for consumption or by business for investment; for example, the rental value of owner-occupied dwellings is attributed exclusively to persons. Direct estimation is also used when the underlying estimation method results in a more accurate and reliable estimate; for example, estimates of gasoline and oil purchases by persons are based on unit sales and average prices for these commodities.

Commodity-flow method

The estimates for many commodities included in the PCE and PDE categories are calculated using the commodity-flow method. This method, which consists of seven steps, converts domestic output (the value of sales of commodities produced by domestic establishments) in producers' prices to domestic supply (the value of production available for sale to domestic purchasers) in purchasers'

prices and therefore includes imports and excludes exports. The domestic supply is then allocated to domestic purchasers—that is, to persons, business, and government.

In step 1, commodities purchased by persons for consumption or by business for investment are identified. The commodities purchased by persons are identified on the basis of the nature of the product from the titles of products included in the quinquennial economic censuses or in the *Standard Industrial Classification Manual, 1987*. The commodities purchased by businesses are identified on the basis of two criteria: (1) The commodity has a life of more than one year and is normally capitalized in business accounting records, and (2) the commodity is not an integral part of a structure and therefore is not included in the value of that structure (for example, an elevator in an apartment building).

In step 2, an estimate of total domestic output—that is, shipments, revenues, or receipts—is prepared for each commodity. The value of the domestic output is in producers' prices—that is, it includes excise taxes and tips but excludes transportation costs and wholesale and retail trade margins.

In step 3, imports are added, and in step 4, trade margins and transportation costs are added. Step 4 converts supply into purchasers' prices, which is the valuation used for the commodity-flow estimates.

In step 5, exports, which include transportation costs and trade margins, are subtracted because they are recorded in the NIPA's as a separate final-demand component.

In step 6, changes in inventories are subtracted because not all goods that are produced or imported in a period are consumed in the same period. In some commodity-flow estimates, a percentage of domestic supply in purchasers' prices—the result of step 2 through 6—is then allocated to users.

In step 7, government consumption expenditures and gross investment and purchases by business on current account (intermediate purchases) are subtracted from the domestic supply in purchasers' prices to obtain a residual that reflects purchases either by persons for consumption or by businesses for investment.

1. Supplementary tables D and E show the I-O commodity compositions of the NIPA PCE and PDE categories. For the other NIPA expenditure components—not shown in tables D and E—private and government structures are presented by type, inventory change is presented by industry of the establishment holding the inventories, and net exports of good and services and government consumption and investment expenditures are shown by type of product.

Additional definitional and classificational changes that were incorporated into the 1992 I-O accounts included the following:

- Expansion of industry detail for construction;
- Expansion of detail for service-producing industries in the detailed I-O accounts; and
- Improved classification of imported goods that were previously identified as noncomparable.

For the 1992 I-O accounts, BEA has also prepared a set of *alternative* benchmark make and use tables that are more closely based on the Standard Industrial Classification (SIC) system. For more information, see the box "Alternative I-O Tables" below.

Major methodological changes.—The 1992 I-O accounts also incorporated the results of the major methodological changes that were introduced as part of the comprehensive NIPA revision. For example, the improved estimates of purchases of new autos and of

investment in nonresidential structures were incorporated into the estimates of final uses, and the new estimates of voluntary contributions to thrift savings plans were incorporated into the estimates of compensation of employees.

For estimates of indirect business tax and nontax liability, the 1992 I-O accounts incorporated the improved industry assignment of commodity taxes that was introduced in the comprehensive revision of gross product originating (GPO) released in August 1996.⁹ Of the new assignments, the one with the largest impact is the shift of the Federal excise tax on gasoline and gasohol from petroleum refining in manufacturing to wholesale trade. These taxes are now classified in a more consistent and comprehensive manner than in the previous benchmark accounts.

In addition, the 1992 I-O accounts incorporated improved measures of output and inputs for the transportation industries and improved measures of the freight

9. See Robert E. Yuskavage, "Improved Estimates of Gross Product by Industry, 1959-94," SURVEY 76 (August 1996) 140

Alternative I-O Tables

The Bureau of Economic Analysis (BEA) has expanded the *traditional* 1992 benchmark I-O accounts to include a set of *alternative* 1992 benchmark make and use tables that are more closely based on the 1987 Standard Industrial Classification (SIC) of industries. The major difference between the traditional I-O tables and the alternative I-O tables is in the treatment of some secondary products produced by industries. The primary purpose of the new alternative tables is to facilitate comparisons of industry data from the 1992 benchmark accounts with other SIC-based data, such as the gross domestic product by industry and capital stock data that are prepared by BEA and the employment and other industry data that are prepared by the Bureau of the Census and the Bureau of Labor Statistics.

Traditional I-O tables

For the traditional I-O tables, BEA begins with industry data from the economic censuses conducted by the Bureau of the Census and classified using the SIC system and then changes the data for selected industries to conform to special I-O requirements. The purpose of these changes is to assure that each resulting I-O industry has a unique output and production process—represented by the mix of inputs—compared with other industries. These changes involve only the outputs and related inputs of some secondary products produced by SIC industries, where the secondary product has a different input mix and production process from the SIC industry's primary product. For example, hotel and lodging places typically provide eating and drinking services as a secondary product to their primary product of hotel and lodging services. The inputs and production processes for these two activities, however, are very different and need to be separated in the traditional I-O accounts for the purpose of preparing total requirements tables. Consequently, the output and inputs associated with eating and drinking services

provided by the hotels and lodging places industry are redefined to the eating and drinking industry for the traditional I-O tables.

Alternative I-O tables

In contrast with the traditional I-O accounts, the alternative I-O accounts conform to the current SIC establishment-based data collection system by showing products—primary and secondary—in the industries where they are produced. For example, the alternative I-O accounts do *not* separate the eating and drinking services from the hotels and lodging places industry activities. Only the industry definitions, which are used to determine the columns of the use table and the rows of the make table, are different from the traditional I-O tables. The commodity definitions, which are used to determine the rows of the use table and the columns of the make table, are the same as those in the traditional tables. Because SIC-defined industries include heterogeneous input mixes and production processes, they are not appropriate for constructing total requirements tables.

The differences between the traditional and alternative tables are large for some industries. For example, redefined auto repair output from the retail trade industry makes up almost 40 percent of the I-O auto repair industry output. Generally, these differences include the following: Manufacturing activities in nonmanufacturing industries (for example, bread-making in the retail trade industry); trade activities in nontrade industries (for example, buying and selling without further processing by manufacturing establishments); and service activities in industries where they are not primary (for example, eating and drinking-related activities in the hotels and lodging places industry). An exception is made for construction activities performed by nonconstruction industries, which are redefined to construction in both the traditional and alternative tables.

charges incurred to transport commodities by different modes. These improvements resulted from a review of the methods and source data used to prepare transportation estimates for the I-O accounts by the staff of the Department of Transportation.¹⁰ Where feasible, BEA incorporated suggested improvements from this review into the 1992 I-O accounts.

Major statistical changes.—The 1992 I-O accounts incorporated newly expanded data from the 1992 economic censuses, which covered about 95 new industries and marked the most significant expansion in scope of the census in the past 50 years. These data were collected primarily in the two new economic censuses—Financial, Insurance, and Real Estate and Transportation, Communications, and Utilities. The I-O accounts also incorporated newly expanded data for the expenses of auxiliary establishments and for the expenses of manufacturing, wholesale trade, retail trade, and service industries. These data, together with data from new annual surveys for transportation and for communications, were used to estimate inputs for these industries.

Introduction to the I-O Accounts

The I-O accounts for the U.S. economy show the production of commodities by each of 498 industries in the make table and the consumption of commodities by these industries in the use table. The use table also shows the commodity composition of gross domestic product (GDP) and the industry distribution of value added.

The I-O accounts show the relationships between all the industries in the economy and all the commodities that these industries produce and use. The estimates of the commodities are shown in producers' prices.¹¹ When producers' prices are used, transportation costs and wholesale and retail trade margins are treated separately as commodities that are produced and used by industries (see the section "Definitions and conventions for valuation of transactions," beginning on page M-15).

The I-O accounts consist of five basic tables: (1) Make, (2) use, (3) commodity-by-industry direct requirements,

(4) commodity-by-commodity total requirements, and (5) industry-by-commodity total requirements.¹²

The make table.—The make table (shown as a schematic in the upper panel of chart 1 and with estimates in table 1) shows the value in producers' prices of each commodity produced by each industry. In each row, one "diagonal" cell shows the value of the production of the commodity for which the industry has been designated the "primary" producer; in chart 1, these cells are shaded in the interior of the make table. The entries in the other cells in the row show the values of the production of commodities for which the industry is a "secondary" producer.¹³ For example, the *industry* "newspapers and periodicals" (row 26A in table 1) is the primary producer of the *commodity* "newspapers and periodicals" (column 26A in table 1). This industry is also a secondary producer of the following commodities: Other printing and publishing (column 26B); scientific and controlling instruments (column 62); advertising (column 73D); and scrap, used and second-hand goods (column 81). The sum of all the entries in the row is the total output of that industry.

The entries in each column of the make table represent the production by both primary and secondary producers of the commodity in the column. For example, computer and data processing services (column 73A) includes the outputs by the primary producer—the industry "computer and data processing services" (row 73A)—and by the following secondary producers: Computer and office equipment (row 51); legal, engineering, accounting, and related services (row 73B); and other business and professional services, except medical (row 73C). The sum of all the entries in the column is the total output of that commodity.

An industry's share of the production of a commodity can be determined from the values in the make table by calculating the entry in a given column as a percentage of the column total. For example, the production of the commodity "scientific and controlling instruments" (column 62) totaled \$107.9 billion, of which the industry "scientific and controlling instruments" (row 62) produced \$100.5 billion or about 93 percent of the total commodity output.

The estimates of industry and commodity output are based primarily on data from the quinquennial economic censuses conducted by the Bureau of the Census.

10. The staff of BEA and of the Bureau of Transportation Statistics of the U.S. Department of Transportation have developed a set of transportation satellite accounts for the United States based on the 1992 benchmark I-O accounts. See Bingsong Fang, Xiaoli Han, Ann M. Lawson, and Sherlene K.S. Lum, "U.S. Transportation Satellite Accounts for 1992," SURVEY 78 (April 1998): 16-27.

11. Estimates of purchases of I-O commodities in purchasers' prices can be derived by adding transportation costs and wholesale and retail trade margins to the values in producers' prices. These estimates are shown in table C for all I-O commodities included in NIPA final demand; in table D, for all I-O commodities included in personal consumption expenditure categories; and in table E, for all I-O commodities included in producers' durable equipment categories.

12. In the designation that is used for I-O tables, the content of the rows is referred to first and that of the columns, second. For example, in a "commodity-by-industry" table, the commodities are in the rows, and the industries are in the columns.

13. Primary and secondary products and the classification of industries are discussed further in the section "Definitions and conventions for classification," beginning on page M-14.

(Table A shows the principal data sources used to estimate industry and commodity outputs for the 1992 I-O accounts.) Economic census data are used for most industries, but data from other Government agencies and private sources are used for the I-O industries that are not covered by the economic census data, such as ed-

ucation and religious organizations. In addition, data from other Government agencies are used to supplement the economic census data for some industries; for example, data on financial statistics for major private electric utilities from the U.S. Department of Energy are used to supplement the data on electric utilities from

Table A.—Principal Data Sources for Industry or Commodity Outputs

Industry or Commodity	Source
Agriculture, forestry, and fisheries	U.S. Department of Agriculture, Forest Service and Economic Research Service farm data National Oceanic and Atmospheric Administration <i>Fisheries of the United States</i>
Mining	Census Bureau 1992 Census of Mineral Industries

Inventory valuation adjustment	Bureau of Economic Analysis, National Income and Product Accounts data Census Bureau 1992 economic census data

the 1992 Census of Transportation, Communications, and Utilities.

BEA makes two adjustments to the economic census data. First, it adds estimates of the output for establishments that are not covered by the economic censuses. This adjustment includes estimates for nonpayroll firms in mining, manufacturing, and wholesale trade and for noncensus-covered industries in agriculture, forestry, and fisheries, in services (such as education and religious organizations), and in transportation (such as railroads). Second, BEA adjusts the data for misreported tax return information, because the Census Bureau data for receipts reflect tax return records in some cases rather than information collected from surveys. Therefore, the tax return data must be adjusted to account for nonfilers and for filers who misreport receipts to the Internal Revenue Service.¹⁴ The largest adjustments are to the data for the services industries in which partnerships and sole proprietorships are more prevalent.

After these adjustments are made, BEA redefines the SIC-based economic census data using the I-O classification system in order to attain greater similarity in the input structures for commodities produced by an I-O industry. For example, restaurants in hotels are redefined to the "eating and drinking places" industry. (See the section "Definitions and conventions for classification.")

The use table.—The data in the use table (shown as a schematic in the lower panel of chart 1) are presented in two parts: Table 2.1 shows the value in producers' prices of each commodity used by each industry or by each final user (represented by the upper left and right quadrants of the use table in chart 1); table 2.2 shows detail on the components of value added and total intermediate inputs that are used by each industry to produce its output (represented by the lower left quadrant of chart 1). In table 2.1, the entry in each row shows the commodity that is used by the industry or final user in the column. For example, the commodity "radio and TV broadcasting services" (row 67) is used by the industries "communications, except radio and TV" (column 66), "radio and TV broadcasting" (column 67), and "advertising" (column 73D) and by persons in "personal consumption expenditures" (column 91).

To facilitate the presentation, the rows and columns of table 2.2 are reversed from those shown in chart 1 as follows: The industries are shown in the rows, and the total intermediate inputs, the components of value added, and the total output for each industry are shown in the columns. For example, for the industry "radio and TV

broadcasting" (row 67), compensation of employees was \$8.4 billion, indirect business tax and nontax liability was \$0.5 billion, and "other value added" was \$2.9 billion. Total intermediate inputs was \$17.6 billion, which is the sum of the intermediate inputs for the industry shown in table 2.1. The total output for this industry was \$29.4 billion.

The column total for industries in table 2.1 equals the industry output in table 2.2. For example, the industry output for the "radio and TV broadcasting" industry (column 67) in table 2.1 equals the total industry output for that industry (row 67) in table 2.2, or \$29.4 billion.

In table 2.1, the sum of the intermediate uses of the commodity by industries (upper left quadrant of chart 1) and all sales to final users (upper right quadrant of chart 1) equals total commodity output. The sum of the intermediate inputs consumed by each industry—that is, the raw materials, semifinished products, and services that the industry purchased—and the value added by the industry equals total industry output. In the I-O accounts, GDP can be measured either as the sum of final uses of commodities or as the sum of value added by industries.

The use table shows the variation in the share of commodity output that is sold to final users. In table 2.1, some commodities, such as "apparel" (row 18), were sold almost entirely to final users; therefore, the demand for these commodities is affected primarily by changes in the buying patterns of the final users. Other commodities, such as "industrial and other chemicals" (row 27A), were used almost entirely as intermediate inputs; for these commodities, production is indirectly connected to final uses.

The use table also shows the variation in the usage of commodities by industries. For example, in table 2.1, the commodity "paper and allied products, except containers" (row 24), with a total commodity output of \$98.5 billion, was used by most industries. The largest user was "other printing and publishing" (column 26B), which used \$16.1 billion, or 16 percent of the total commodity output. In contrast, "metal containers" (row 39), with \$13.2 billion of commodity output, were used by only 17 industries. The largest user was the industry "food and kindred products" (column 14), which used \$9.4 billion, or 71 percent of the total commodity output.

Finally, the use table shows the variation in the use of total value-added inputs by industries to produce their outputs. For example, in table 2.2, the industry "real estate and royalties" (row 71B) required \$412.2 billion of value-added inputs, or 75 percent of its total output; of this total, \$48.4 billion was for compensation of employees, \$79.7 billion was for indirect business tax and nontax liability, and \$284.2 billion was for "other value added."

14. See Robert P. Parker, "Improved Adjustments for Misreporting of Tax Return Information Used to Estimate the National Income and Product Accounts, 1977," SURVEY 64 (June 1984): 17-25.

In contrast, the industry "livestock and livestock products" (row 1) required \$15.6 billion of total value-added inputs, or 17 percent of its total output; of this total, \$4.5 billion was for compensation of employees, \$1.3 billion was for indirect business tax and nontax liability, and \$9.8 billion was for "other value added."

The estimates of intermediate inputs in the use table are primarily based on data from the economic censuses. Much of these data are for broad expense categories, such as office supplies, that must be allocated to I-O commodities, such as postal services, paper, and envelopes. In cases in which estimates of expenses are not available, BEA uses commodity shipments and other related information. For example, the estimates of the purchases of spark plugs are allocated using the stock of cars, trucks, and buses by industry. (Table B shows the principal sources and methods used to estimate intermediate and value-added inputs for 1992 I-O industries.)

The estimates of final uses of commodities are prepared from source data on purchases or by using the commodity-flow method. For example, the estimates of exports and imports are based on source data from the Census Bureau and BEA's U.S. balance of payments accounts. In the commodity-flow method, which is used mainly for personal consumption expenditures and producers' durable equipment, domestic output is adjusted for exports and imports; trade margins and transportation costs are added to estimate supply in purchasers' value. Then, either a percentage of this supply is attributed to final users, or

the supply is adjusted for intermediate purchases and the residual attributed to final users.¹⁵

Two of the components of value added by industry are estimated directly using a variety of data sources (table B). Most of the estimates of compensation of employees by industry are based on census data. The estimates of indirect business tax and nontax liability by industry are prepared in two parts: For excise and general sales taxes, the values are estimated as part of each industry's output; for other indirect business taxes, such as property taxes, estimates are distributed on the basis of a variety of source data, including State government tax collections and highway statistics. The remaining component is shown as "other value added," which is derived as a residual by subtracting the total intermediate inputs, compensation of employees, and indirect business tax and nontax liability from total industry output.

The commodity-by-industry direct requirements table.

—The commodity-by-industry direct requirements for a dollar of industry output are presented in two parts: Table 3.1 shows the input coefficients for each commodity that an industry requires to produce a dollar of output; table 3.2 shows component detail for the value-added input coefficients that an industry requires to produce a dollar of output. The input coefficients in both tables

15. For more detailed information, see U.S. Department of Commerce, Bureau of Economic Analysis, *Personal Consumption Expenditures*, Methodology Paper Series MP-6 (Washington, DC: U.S. Government Printing Office, June 1990): 31-34.

Table B.—Principal Data Sources and Methods for Estimating Intermediate Inputs and Value-Added Inputs

Component	Source or method
Intermediate inputs	For most census-covered industries, selected purchased services (legal; communications; electricity; repair of buildings; repair of equipment; rental of buildings; rental of equipment; accounting, auditing, and bookkeeping; advertising; and data processing and computer services) and purchased fuels; in addition, for manufacturing and mining, materials consumed and contract work, from 1992 economic censuses. For agriculture industries, inputs from U.S. Department of Agriculture. For most remaining industries, a combination of selected inputs from trade sources and 1987 estimates extrapolated by change in industry output. All inputs adjusted to balance to commodity outputs.
Value-added inputs:	
Compensation of employees	For census-covered industries, payroll and benefits from Census Bureau 1992 economic censuses, adjusted for misreporting and I-O industry definitions. For noncensus-covered industries, tabulations of wages and salaries covered by State unemployment insurance, BEA estimates of benefits, adjusted for misreporting and I-O industry definition. All estimates adjusted to balance to total compensation, estimated as part of the national income and product accounts.
Indirect business tax and nontax liability	For excise taxes and commodity taxes, estimates are from output controls. For other tax and nontax liability, distributed to industries using indirect techniques. All estimates adjusted to balance to total indirect business tax and nontax liability, estimated as part of the national income and product accounts.
Other value added	For most industries, residual method: Total industry output less total intermediate inputs, compensation of employees, and indirect business tax and nontax liability. For government enterprises, other value added is the current surplus.

are also referred to as "direct requirements coefficients." The sum of the coefficients for total intermediate inputs and for the total value added for each industry is equal to 1.00000.

Tables 3.1 and 3.2 are derived from tables 2.1 and 2.2, respectively, by dividing each industry's commodity or value-added input by that industry's total output. However, table 3.1, unlike table 2.1, does not include the components of final uses or gross domestic product.

In table 3.1, each column shows, for the industry named at the head of the column, the input coefficients for the commodities and for the total value added that an industry directly requires to produce a dollar of output. Each row shows the commodity or the total value added that the industry requires. For example, to produce a dollar of output, the industry "radio and TV broadcasting" (column 67) has direct requirements for 2.1 cents (calculated as $100 \text{ cents} \times 0.02064$ from the table) of the commodity "radio and TV broadcasting" (row 67) and 2.8 cents of the commodity "advertising" (row 73D).

In table 3.2, industries are shown in the rows, and the total output, the total intermediate inputs, and the components of value added that are required to produce a dollar of output are shown in the columns. For example, to produce a dollar of output, the industry "radio and TV broadcasting" (row 67) has direct requirements for 40.2 cents of total value added; these requirements consist of 28.6 cents of compensation of employees, 1.8 cents of indirect business tax and nontax liability, and 9.8 cents of "other value added." The industry has direct requirements of 59.8 cents of intermediate inputs, which are shown in detail in column 67 of table 3.1.

The information in table 3.1 can be used with the information in the make table (table 1) to trace the changes in an industry's output, as well as the changes in that industry's total requirements for other industries' outputs that result from a change in final uses of a commodity. For example, tables 1 and 3.1 can be used to trace the direct effects of a \$1 billion increase in sales of household appliances to final users on all industries producing household appliances.

In table 1, total output of the commodity "household appliances" (column 54) was \$16,833 million. The industry "household appliances" (row 54) produced \$16,033 million, or 95.2 percent, of this commodity; the industry "audio, video, and communication equipment" (row 56) produced \$268 million, or 1.6 percent, and 18 other industries produced the rest. Based on these proportions, production in the household appliances industry would initially increase \$952 million ($\$1 \text{ billion} \times 0.952$) to meet the \$1 billion increase in household appliances sold to final users. Production in the audio, video, and

communication equipment industry would increase \$16 million ($\$1 \text{ billion} \times 0.016$), and production in the 18 other industries would increase \$32 million.

Table 3.1 can then be used to determine the commodity inputs required by each industry to produce its share of the \$1 billion of household appliances sold to final users. The commodities required by the household appliances industry will be traced first. For example, column 54 in table 3.1 shows that the household appliances industry would require, in addition to other commodity inputs, \$1.2 million ($\$952.0 \text{ million} \times 0.00126$) of the commodity "household appliances" (row 54); to provide this commodity input, the industry's production would have to increase an additional \$1.1 million ($\$1.2 \text{ million} \times 0.952$). Thus, the increase in the production of the household appliances industry would be \$953.1 ($\$952.0 \text{ million for final users plus } \$1.1 \text{ million for its own intermediate use}$). In turn, this production would require \$65.1 million ($\$953.1 \text{ million} \times 0.06835$) of primary iron and steel manufacturing (row 37), \$83.0 million ($\$953.1 \text{ million} \times 0.08710$) of rubber and miscellaneous plastics products (row 32), and so on down the column. From table 3.2, the value added required by the household appliances industry would total \$335.9 million ($\$953.1 \text{ million} \times 0.35243$). Of this total, \$200.9 million ($\$953.1 \text{ million} \times 0.21075$) is for compensation of employees, \$7.4 million ($\$953.1 \text{ million} \times 0.00781$) is for indirect business tax and nontax liability, and \$127.6 million ($\$953.1 \text{ million} \times 0.13387$) is for "other value added."

The information in tables 1 and 3.1 can now be used to trace the continuing repercussions of the \$953.1 million of additional output produced by the household appliances industry on the output of other industries. For example, to supply the primary iron and steel required by the household appliances industry, the industry "primary iron and steel manufacturing" (column 37 in table 3.1) requires \$12.0 million ($\$65.1 \text{ million} \times 0.18508$) of the commodity "primary iron and steel manufacturing" (row 37 in table 3.1)—of which it produces \$11.8 million ($\$12.0 \text{ million} \times 0.987$ derived from table 1) and all other industries produce \$0.2 million ($\$12.0 \text{ million} \times 0.013$). Other commodities required by the primary iron and steel manufacturing industry include \$1.3 million ($\$76.9 \text{ million} \times 0.01663$) of general industrial machinery and equipment (row 49), \$1.4 million ($\$76.9 \text{ million} \times 0.01762$) of coal mining (row 7), and so on. Similarly, all the other industries that produce primary iron and steel manufacturing (column 37 in table 1) as secondary products—such as primary nonferrous metals manufacturing (row 38 in table 1)—would also require commodities to produce their shares of the output of

primary iron and steel manufacturing that is required by the household appliances industry.

Similarly, the continuing effects on each industry producing its share of the \$1 billion of household appliances sold to final users can be traced, and the increase in production required from each industry can be derived. For each industry that produces household appliances, either as a primary product or as a secondary product, the direct requirements coefficients corresponding to that industry are used from tables 3.1. For example, for household appliances as a primary product of the household appliances industry, the direct requirements coefficients from column 54 in table 3.1 are used; for household appliances as a secondary product of the audio, video, and communication equipment industry, the coefficients from column 56 are used.

The commodity-by-commodity total requirements table.

—The commodity-by-commodity total requirements table (table 4) shows the inputs of each commodity that are directly and indirectly required to deliver a dollar of the commodity to final users. It combines the information in tables 1 and 3.1 to completely trace and summarize as a multiplier the continuing repercussions of a dollar change in the final use of a specified commodity on total commodity outputs. Each column shows the commodity delivered to final users, and each row shows the total production of the commodity that is required. The coefficients in this table are referred to as “commodity-by-commodity total requirements coefficients.” The table is derived from both the make and use tables.¹⁶

In the household appliances example, the total requirements for each commodity can be calculated from the entries in column 54. Providing consumers with \$1 billion of household appliances would require \$1,001.3 million ($\$1 \text{ billion} \times 1.00133$) of household appliances (row 54) from all industries. Similarly, it would require \$15.3 million ($\$1 \text{ billion} \times 0.01530$) of paperboard containers and boxes (row 25), \$51.5 million ($\$1 \text{ billion} \times 0.05153$) of plastics and synthetic materials (row 28), and so on.

The total at the bottom of each column in table 4 is the sum of all the changes in commodity outputs that are

required to deliver a dollar of a commodity to final users. Because each total change is a dollar multiple of the initial dollar spent for the output of the given commodity, the total change in output is often called the total commodity output multiplier.

These multipliers can be used to estimate the impact of changes in the final uses of commodities on total commodity output. For example, for the household appliances commodity (column 54), the total commodity output multiplier is 2.33419 (the sum of all the entries in the column). The total dollar change in all commodity output that is required for an additional \$1 billion of household appliances delivered to final users is \$2,334.2 million ($\$1 \text{ billion} \times 2.33419$).

The industry-by-commodity total requirements table.

—The industry-by-commodity total requirements table (table 5) shows the input requirements coefficients for the output from each industry that is directly and indirectly required to deliver a dollar of a commodity to final users. Each column shows the commodity delivered to final users, and each row shows the total production that is required from an industry. The coefficients in this table are referred to as “industry-by-commodity total requirements coefficients.” The table is derived from both the make and use tables.

The calculations made using this table are similar to those using the commodity-by-commodity total requirements table. For example, to provide final users with an additional \$1 billion of household appliances, the household appliances industry (row 54) is required to produce \$954.3 million ($\$1 \text{ billion} \times 0.95433$) of industry output; the paperboard containers and boxes industry (row 25) is required to produce \$15.5 million ($\$1 \text{ billion} \times 0.01545$) of industry output, the plastics and synthetic materials industry (row 28) is required to produce \$45.1 million ($\$1 \text{ billion} \times 0.04510$) of industry output, and so on.

The total at the bottom of each column in table 5 is the sum of all the changes in industry outputs that are required to deliver a dollar of a commodity to final users. Because each total change is a dollar multiple of the initial dollar spent for the output of the given industry, the total change in output is often called the total industry output multiplier.

These multipliers can be used to estimate the impact of changes in the final uses of commodities on total industry output. For example, the total industry output multiplier for the household appliances commodity (column 54) is 2.31873 (the sum of all the entries in the column). The total dollar change in the output of all industries that is required for an additional \$1 billion of household

16. The final-use multipliers presented, including the commodity-by-commodity total requirements table (table 4) and industry-by-commodity total requirements table (table 5), identify the cumulative effects on total industry and commodity outputs that result from a change in final use. In contrast to conventional macroeconomic multipliers that measure the cumulative impact on final output of a policy change, such as the decline in GDP that results from a reduction in government spending, these final-use multipliers measure the impact of a change in final demand (uses) on gross output (final and intermediate output). Indeed, shifts in the composition of final uses can have a “multiple” impact on industry and commodity output but can have no effect on the level of total GDP.

appliances delivered to final uses is \$2,318.7 million (\$1 billion $\times$ 2.31873).

Comparison of total multipliers.—The total multipliers in tables 4 and 5 are similar but not identical. The main reason for the difference is that the commodity multipliers in table 4 includes “noncomparable imports,” which by definition do not have a domestic industry counterpart and are not included in the total industry output multipliers in table 5.

When using the two total requirements tables, one should be aware that the amount of output required to deliver a dollar of commodity to final users may include both imported commodities and domestically produced commodities. However, both the total commodity output multiplier and the total industry output multiplier represent the output required as if all of the commodity were domestically supplied. Therefore, if a portion of the commodity was imported, the impact on domestic output would be lower than that implied by the multiplier.

The uses of the I-O accounts

The I-O accounts have a variety of uses that range from an analytical tool to study industry production to a framework for benchmarking other economic statistics programs. This section describes the uses of the I-O accounts in studying interindustry relationships in the U.S. economy and in preparing economic statistics. It also describes some of the assumptions that analysts must make when they use I-O accounts as an economic tool for analysis.

Analytical uses.—The I-O accounts are an important analytical tool because they show the interdependence among the producers and consumers in the economy. Using the I-O accounts, analysts can estimate the direct and indirect effects of changes in final uses on industries and commodities.

For example, the I-O accounts can show how an increase in consumer demand for motor vehicles will affect the rest of the economy. It will likely cause an increase in the production of motor vehicles, which could result in increased steel production and which, in turn, could require increases in the production of chemicals, iron ore, limestone, and coal. It could also require an increase in the production of upholstery fabrics, which could require more natural fibers, more synthetic fibers, and more plastics and which, in turn, could require increases in the production of “electric services (utilities)” and “plastics materials and resins.” In the

I-O accounts, these effects are quantified in the total requirements tables.¹⁷

Similarly, the requirements tables can be used to estimate the effects of a strike or natural disaster on the economy or, supplemented with additional information, to estimate the effects of an increase in demand for U.S. exports on employment. The Federal Emergency Management Agency, the Department of Defense, and the Census Bureau, among others, have used the I-O accounts for such studies.

When the I-O accounts are augmented with regional data from BEA, they can show economic effects by region. For example, the regional I-O accounts can be used to estimate the potential impact of a planned Federal Government shutdown of a military base.¹⁸ When the I-O accounts are augmented with international data, they can be used to estimate the effects of exchange-rate changes on the profitability and activities of manufacturing industries that rely on imported inputs.¹⁹

Analysts using the I-O tables to estimate the effects of changes in final uses on industries and commodities need to be aware of the underlying I-O assumptions. For example, the I-O tables are based on a set of relationships that exist between producers and consumers in a given year; these relationships reflect constant technology and relative prices. The interindustry relationships reflect the average input structure in each industry for that year, but these relationships do not necessarily reflect those of an additional unit of production. Therefore, for analyses that require alternative assumptions, other economic tools may be required.

Statistical uses.—The I-O accounts are used in several ways to prepare economic statistics. For example, the final-use components of personal consumption expenditures and of gross private domestic investment—adjusted to reflect the definitional, classificational, and statistical changes made after the completion of the benchmark I-O accounts—provide the benchmarks for the NIPA’s.

17. In an open economy, the production effects are likely to be reflected as an increase in both domestic production and imports. To separate the effects on domestic production from those on imports, analysts generally use a special set of I-O tables that includes an import matrix that identifies the intermediate purchases by producers that are obtained from foreign sources.

18. Estimates of regional economic effects derived from BEA’s Regional Input-Output Modeling System are based mainly on two data sources: The U.S. benchmark I-O accounts and BEA’s county estimates of wage and salary disbursements at the four-digit SIC level. These estimates are available from BEA’s Regional Economic Analysis Division. For more information, see U.S. Department of Commerce, Bureau of Economic Analysis, *Regional Multipliers: A User Handbook for the Regional Input-Output Modeling System (RIMS II), Third Edition* (Washington, DC: U.S. Government Printing Office, 1997).

19. Jose Campa and Linda S. Goldberg, “The Evolving External Orientation of Manufacturing: A Profile of Four Countries,” *Economic Policy Review* 2 (1997): 53–81.

The benchmark I-O accounts are also used as a framework to weight and to calculate index numbers for price, volume, and value. For example, the Bureau of Labor Statistics uses data from the I-O accounts as weights in compiling industry price indexes.

Definitions and conventions for classification

The I-O accounts use two classification systems—one for industries and another for commodities—and both systems generally use the same I-O numbers and titles. This section discusses first the I-O industry classification system and then the I-O commodity classification system.

The I-O industry classification system.—This system is based on the Standard Industrial Classification (SIC) system, which classifies establishments into industries on the basis of the primary activities of the establishments. Establishments are defined as economic units that are typically at a single location where business is conducted or where services or industrial operations are performed.²⁰

The I-O industry classification system differs from the SIC system in three major ways. First, the I-O industry system redefines some secondary production of some SIC industries to other industries. Second, the I-O industry classification system includes “special industries” that are not considered to be industries in the SIC system. Third, because of data limitations, the I-O industry system includes three industries—agriculture, construction, and real estate—that are defined on an activity basis rather than an establishment basis.

Redefinitions result in the shift of output and inputs related to the secondary activities of some establishments to the SIC industries in which they are primary activities. (A primary activity must make up the largest proportion of the establishment’s output; all the other activities are secondary.) The I-O industry classification system only redefines the secondary activities of an SIC industry for which the related inputs are very different from those required for the industry’s primary activity. For example, both the output and related inputs of restaurants in hotels are moved from the SIC industry “hotels and lodging places” (in which “hotels and lodging” is the primary activity) to the industry “eating and drinking places” (in which “eating and drinking” is the primary activity), because the input structure of “meals and beverages” is very different from that of the industry’s primary activity. After the redefinition is completed, the total outputs for both

I-O *industries*—that is, “eating and drinking places” and “hotels and lodging places”—are different from their SIC industry counterparts. However, total outputs for the I-O *commodities* remain unchanged from their counterparts in the SIC system. The purpose of redefinitions in the I-O analytical framework is to attain a greater degree of homogeneity in the inputs required by an I-O industry to produce its commodities.

The following activities are redefined:

- Construction work (both new and maintenance and repair) performed by all establishments (including government) is redefined to the construction industries. Construction work performed by and for establishments classified in nonconstruction industries is referred to as “force-account construction.”
- Manufacturing in trade and service establishments is redefined to the appropriate manufacturing industries.
- Retail trade in service establishments is redefined to the retail trade industry. Services in trade establishments are redefined to service industries. Some services are also redefined among service industries.
- Manufacturers’ sales of purchased goods (resales) are redefined to the wholesale trade industry.
- Rental activities of all establishments are redefined to the real estate and rental industries.
- The preparation of meals and beverages in most establishments is redefined to the eating and drinking industry.

Redefinitions affected most industries, but the total output that was redefined for most industries was small for the 1992 I-O accounts. Redefinitions had a significant effect on the following industries: Automotive repair and services (I-O industry 75) has \$138.4 billion in total industry output after \$1.0 billion was removed and \$48.1 billion was added from wholesale and retail trade; eating and drinking places (I-O industry 74) has \$280.7 billion in total output after \$1.0 billion was removed and \$45.6 billion was added; wholesale trade (I-O industry 69A) has \$569.0 billion in total output after \$51.0 billion was removed and \$31.0 billion was added; and retail trade (I-O 69B) has \$522.5 billion in total output after \$82.7 billion was removed and \$13.9 billion was added.

Special industries are included in the I-O system, but they are not considered industries in the SIC system. In the SIC, government establishments engaged in business-like activities (classified in SIC industry divisions 1–8), such as the U.S. Postal Service and the local water authorities, are classified in the same SIC industry as private establishments. In the I-O system, these establishments

20. Appendix A provides a list of I-O industries and the relationships of these industries to the 1987 SIC codes. For more information on the SIC, see Office of Management and Budget, Statistical Policy Division, *Standard Industrial Classification Manual, 1987* (Washington, DC: U.S. Government Printing Office, 1987): 11–18.

are classified in Federal Government enterprises (I-O 78) and State and local government enterprises (I-O 79).²¹

Another special industry created for the I-O accounts, general government (I-O 82), covers all other government establishments and is similar in scope to SIC industry division 9, public administration. The output and value added of this industry are defined as compensation of employees and consumption of fixed capital of general government agencies.

The I-O system also includes a special industry for the inventory valuation adjustment (I-O 85), which is an adjustment needed to eliminate inventory profits or losses from the change in the inventory component of output.

Activity-based industries are necessary for agriculture, construction, and real estate. Agriculture industries are classified by commodity, such as dairy farm products, because the quality of the source data on the production of agriculture commodities is believed to be better than data available by type of establishment or farm.

Construction is classified by type of activity, such as the construction of new highways and streets, rather than by the type of construction contractor, such as heavy construction contractors who pave asphalt roads, for two reasons. First, source data are not available, but more importantly, construction is an atypical activity in that it is performed in almost all industries; most establishments perform maintenance and repairs, and some perform their own new construction. This type of activity is referred to as force-account construction.

To adequately represent construction activities in the U.S. economy, the output associated with all construction activities performed by the nonconstruction industries is redefined to the construction industry. Similarly, the intermediate and value-added inputs for this work are moved to the construction industries.

The real estate industry includes all real estate rental receipts and all imputed rents for owner-occupied housing and for buildings and equipment owned and used by non-profit institutions primarily serving households. Rental receipts are included in this industry because of a lack of data for individual industries. Imputed rents are included in the I-O accounts to make them consistent with the NIPA's.

The I-O commodity classification system.—In this system, each commodity is assigned the code of the industry in which the commodity is the primary product. This code is then used to group the production of the com-

modity in the industry in which it is the primary product with its production in other industries in which it is a secondary product. In a few cases, the I-O system reclassifies SIC-defined commodity groups, and a secondary product is created from an SIC-defined primary product. The output of the SIC-defined product is moved to the I-O-defined primary product group; therefore, the output represents the total output of the product, regardless of the classification of the establishments that produce it.

For example, in the SIC system, the primary product of the newspaper industry is defined as newspaper sales and newspaper advertising. In the I-O system, the primary product of the newspaper industry is newspaper sales. The advertising component is considered to be a secondary activity; therefore, advertising receipts or output are moved to the advertising commodity group. The total output for the I-O newspaper industry remains unchanged.

Reclassifications affected a small percentage of commodities, and for most of these commodities, the values were not very large. However, some commodities had significant reclassified sales. For example, the commodity "newspapers and periodicals" (I-O 26A) has \$19.9 billion in total commodity output after \$35.4 billion was moved to the advertising commodity (I-O 73D).

In several cases, there is no I-O commodity classification that corresponds to an industry classification. If a commodity is the primary product of more than one SIC industry, then the commodity is reclassified and given the I-O commodity number that corresponds to the I-O industry that is the largest producer of the commodity. As a result, the following detailed I-O commodities have no commodity output: Forest products (commodity 2.0701); knit outerwear mills (commodity 18.0201); knit underwear and nightwear mills (commodity 18.0202); knitting mills, not elsewhere classified (n.e.c.) (commodity 18.0203); fertilizers, mixing only (commodity 27.0202); cold-rolled steel sheet, strip, and bars (commodity 37.0104); steel pipe and tubes (commodity 37.0105); secondary nonferrous metals (commodity 38.0600); copper foundries (commodity 38.1200); non-ferrous castings, n.e.c. (commodity 38.1300); Federal Government electric utilities (78.0200); State and local government passenger transit (commodity 79.0100); and State and local government electric utilities (commodity 79.0200).

Definitions and conventions for valuation of transactions

This section describes the underlying definitions and conventions for valuation that are used in preparing the

21. Establishments defined as government enterprises follow the same classification used in the NIPA's. For more information, see U.S. Department of Commerce, Bureau of Economic Analysis, *Government Transactions*, Methodology Paper Series MP-5 (Washington, DC: U.S. Government Printing Office, November 1988): 6.

1. The NIPA category refers to the line number associated with the PCE category in NIPA table 2.4.

estimates of transactions in commodities. It also describes the valuation used in wholesale trade, retail trade, imports of goods and services, exports of goods and services, and the change in business inventories.

Transactions in commodities are valued at producers' prices in the I-O accounts. These prices exclude wholesale and retail trade margins and transportation costs, but they include excise taxes collected and remitted by producers. Transportation costs and trade margins are shown as separate purchases by the users of the commodities. The sum of the producers' value, transportation costs, and trade margins equals the purchasers' value. Thus, the flows of commodities for resale to and from wholesale trade and retail trade are not shown. If trade were shown as buying and reselling commodities, industrial and final users would make most of their purchases from a single source—trade.

To show the relationship between the production of commodities and their purchase by intermediate and final users, commodities are shown as if they move directly to users. Wholesale and retail trade margins on commodities are shown as purchases by users and are included in the trade rows of use table 2.1 (rows 69A and 69B). Transportation costs are the freight charges paid to move the commodity from the producer to the intermediate user

or the final user. All transportation costs are shown as a purchase by users and are included in the transportation rows of the use table (rows 65A-E and 68B).

Wholesale trade has one primary product—distributive services for the sales of goods to retailers, intermediate users, and final users (other than persons). Distributive services provided by wholesalers include merchandise handling, stocking, selling, and billing. Wholesale trade output consists of trade margins and nonmargin output; both exclude the cost of resales. Margin output is included in the purchasers' prices of the goods that are purchased, but not in the producers' prices of those goods. Nonmargin output, which includes all customs duties, is assumed to be purchased by the producer of the goods being sold and is thus reflected in the producers' prices of the goods. Both the margin and nonmargin outputs are included in the wholesale trade row of use table 2.1 (row 69A).

Margin output is calculated in two parts. For merchant wholesalers (establishments that primarily buy and resell products manufactured by other firms) and agents and brokers (when selling goods on their own account), the trade margin is calculated as wholesale sales less the cost of goods sold plus taxes collected by the distributor. For manufacturers' sales branches (wholesale trade

1. The NIPA category refers to the corresponding line number associated with the PDE category in NIPA table 5.8.

establishments that primarily buy and resell goods manufactured by the same firm), it is calculated as operating expenses plus taxes collected by the sales branches.²²

Nonmargin output occurs when the wholesale trade service is purchased separately from the commodity, such as when a wholesaler acts as a broker between buyer and seller. It is calculated in four parts: Operating expenses of manufacturers' sales offices, commissions on goods sold through agents and brokers, taxes collected, and customs duties. Customs duties are considered to be taxes collected by wholesale trade establishments and are included in nonmargin output.

Retail trade has one primary product—distributive services for the sale of goods primarily to persons. Its output includes primarily retail trade margins, which are measured as retail sales less the cost of goods sold plus the taxes collected by retail trade establishments. It also includes some nonmargin output, which consists mostly of mailing and handling charges of retailers. All retail trade margins are included in the retail trade row of use table 2.1 (row 69B).

Retail trade margins apply primarily to purchases by persons. However, some retail trade margins are applied to purchases by business and government—for example, some purchases of personal computers by business. Retail trade margins also are applied to some intermediate purchases by business—for example, office supplies and gasoline.

Imports of goods and services, a component of final uses, are measured by individual commodity at domestic port values. The domestic port value of an imported commodity, which includes customs duties, is considered to be equivalent to the producers' price of a domestically produced commodity. Adjustments to convert the sum total of all commodity imports of goods to foreign port value are included in the imports of transportation and wholesale trade. For example, the imports of the individual commodity apparel (row 18, column 95) in table 2.1 is -\$38.5 billion, the value of imports at the port of entry to the United States. This value consists of a foreign port value of -\$31.8 billion, vessel charges of -\$0.7 billion, air charges of -\$0.9 billion, and customs duty of -\$5.1 billion. The vessel and air charges are subtracted from the transportation rows (rows 65C and 65D, column 95) to be netted against balance of payments estimates of the total imports of transportation services. The duty is subtracted from the wholesale trade row (row 69A, column 95). The sum of the domestic port values for all commodities less the transportation charges and duty in

the transportation and wholesale rows is the foreign port value for all imports.

Imports of services are valued at producers' prices. There are no margins or transport costs associated with services.

Imports also include a special category referred to as "noncomparable imports." Noncomparable imports consist of goods purchased by U.S. residents abroad and of service imports with no domestic counterparts, such as port expenditures by U.S. airlines in other countries. These imports are distributed directly to industries and final users and are shown as noncomparable imports in use table 2.1 (row 80). All other imports are assumed either to be consumed within the U.S. boundaries or to have domestic equivalents.

In past benchmarks, noncomparable imports also included domestically consumed imported goods, such as bananas and coffee, that had no significant domestic counterparts. However, most imported goods now have domestic counterparts, so the 1992 benchmark I-O accounts do not include domestically consumed imports of goods in this category.

Exports of goods and services, a component of final uses, are measured by commodity at producers' prices—the same as other domestically produced commodities. Transportation and trade commodities, which are required to move exports from the producer to the port of exit, are included in the transportation and trade rows of use table 2.1. For example, exports of computer and office equipment are \$22.9 billion (row 51, column 94), which represents the value of the computer and office equipment in producers' prices. The transportation costs, \$0.2 billion, and the trade margins, \$3.7 billion (row 51 and under the column exports of goods and services in table C), required to move the exports of computers and office

Table F.—Relationship of Exports and Imports in the Input-Output Accounts to the National Income and Product Accounts, 1992

Net exports, I-O	-29,027	-96,184	67,157

1. Consist of statistical revisions in the balance of payments accounts that had not yet been incorporated in the NIPA's at the time of the release of the 1992 benchmark I-O accounts in late 1997.

NIPA National income and product accounts
I-O Input-output accounts

22. Expenses are used because there are no data on cost of goods sold for these wholesale trade establishments.

equipment from producer to the port of exit are included in the rows for transportation (rows 65A-E and 68B) and for trade (rows 69A and 69B) in table 2.1.

Change in business inventories, another component of final uses, is measured by commodity at the book-value change reported by industries in the economic censuses. The inventory valuation adjustment, which is needed to remove inventory profits or losses from total gross domestic product in the I-O accounts, is shown as a single entry in table 2.1 (row 85, column 93). In the 1992 I-O accounts, the inventory valuation adjustment is -\$8.0 billion.

Supplementary tables

Four supplementary tables are also presented in tables C, D, E, and F. Tables C, D, and E are bridges between the I-O accounts and the NIPA's. They present the I-O commodity composition of NIPA final demand in producers' and purchasers' prices. Specifically, table C presents the composition of all NIPA final-demand components; table D, the composition of personal consumption expenditure categories shown in

NIPA table 2.4; and table E, the composition of NIPA producers' durable equipment expenditure categories shown in NIPA table 5.8.²³

Table F presents a reconciliation of the I-O estimates of exports and imports with those in the NIPA's. Both exports and imports are adjusted so that total GDP is unchanged. The adjustments are necessary because the NIPA's—unlike the I-O accounts—include the U.S. merchandise that is returned to the United States from other countries in imports and because the NIPA exports include the foreign merchandise that is reexported from the United States to other countries.²⁴

23. NIPA tables 2.4 and 5.8 are published annually in the SURVEY, most recently in the August 1998 issue.

24. Returned U.S. merchandise consists of domestically produced goods that were exported for processing, or assembly, or both and then returned to the United States. Reexports consist of the commodities that were previously imported into the United States and then exported from the United States in substantially the same condition as when they were imported. A timing adjustment is made for reexports that entered the country in an earlier year. The I-O accounts measure this value as general imports less imports for consumption, and the value is shown as a transaction between noncomparable imports and inventory change.

Detailed Accounts

How to read the tables

The detailed tables with I-O estimates at the six-digit I-O level cover 498 industries and commodities, as well as 40 types of final uses. These tables, which begin on page 45, are presented in columnar form with zeros omitted, so that they are easy to use, especially for users who are interested in only a few industries or commodities. This presentation is in contrast to that for the tables showing the summary (I-O two-digit level) I-O estimates, which are typically presented in matrix form, where all estimates can be viewed simultaneously.

The make table for industries

The make table for industries (table 1A (rows) of the "Detailed Tables") shows the industries and the commodities that they produced, in millions of dollars at producers' prices, for six-digit industries and commodities.²⁵ This table presents information that corresponds to that presented in the rows in the summary I-O make table (table 1 of the "Summary Tables").

The information for each industry is contained in three columns. The first column shows the I-O code for the six-digit producing industry. The second column shows the I-O codes for the six-digit commodities that the industry produced. The third column shows the total value of the commodities that the industry produced and then the value of the output of the commodities listed in the second column. For example, the first entry in the table shows, in the first column, the six-digit *industry* 1.0100, dairy farm products. The second column shows that this industry produced four commodities: 1.0100, dairy farm products; 4.0001, agricultural, forestry, and fishery services; 14.0600, fluid milk; and 76.0206, other amusement and recreation services.²⁶ The third column shows that the total value of commodities produced by the dairy

farm products industry was \$20,285 million in producers' prices in 1992. This total consisted of \$19,646 million, \$86 million, \$365 million, and \$188 million for the commodities shown in the second column.

The make table for commodities

The make table for commodities (table 1B (columns) of the "Detailed Tables") shows the commodities and the industries that produced them, in millions of dollars at producers' prices, for six-digit commodities and industries. This table presents information that corresponds to that presented in the columns in the summary I-O make table (table 1 of the "Summary Tables").

The information for each commodity is contained in three columns. The first column shows the I-O code for the six-digit commodity that was produced. The second column shows the I-O codes for the six-digit industries that produced the commodity, either as a primary producer or as a secondary producer. The third column shows the total value of the output of that commodity and then the values of the commodity output produced by the industries listed in the second column. For example, the first entry in the table shows, in the first column, the six-digit *commodity* 1.0100, dairy farm products. The second column shows that there was only one producing industry, the six-digit *industry* 1.0100, dairy farm products. The third column shows that the total value of dairy farm products produced by the dairy farm products industry was \$19,646 million in producers' prices in 1992.

Similarly, moving down the first column to the first multiple-industry entry, we see that for the *commodity* 3.0001, forestry products, the total value of output of this commodity was \$8,129 million (shown in the third column). This output was produced by three *industries* (shown in the second column): 1.0302, miscellaneous livestock, which produced \$205 million; 2.0701, forest products, \$2,047 million; and 3.0001, forestry products, \$5,877 million.

The use table for commodities

The use table for commodities (table 2A (rows) of the "Detailed Tables") shows for each commodity the dollar

25. The I-O accounts use two classification systems, one for industries and another for commodities, but both systems generally use the same I-O numbers and titles. For further information, see the section "Definitions and conventions for classification" on page M-14 and "Appendix A: Classification of Industries in the 1992 Benchmark Input-Output Accounts," which begins on page M-32.

26. The other amusement and recreation services commodity consists of receipts that the dairy farm products industry receives for services provided at public golf courses, amusement parks, and the like. The full list of service areas is provided by the related SIC codes shown in appendix A.

value used by each industry and final user, in millions of dollars at producers' prices, for six-digit commodities, industries, and final uses. This table presents information that corresponds to that presented in the rows in the summary I-O use table (table 2.1 of the "Summary Tables").

The information for each commodity is contained in three columns. The first column shows the I-O code for the six-digit commodity that was used. The second column shows the I-O codes for the six-digit industries and the final users of the commodity. The third column shows the total value of the commodity that the industries used and then the value of the commodity used by each industry and final user listed in the second column. For example, the first entry in the table shows, in the first column, the six-digit *commodity* 1.0100, dairy farm products. The second and third columns show that most of the \$19,646 million of this commodity was used by six *industries*, but that some of it was sold to final users (that is, PCE), some went into inventories, and some was exported and imported. For example, \$183 million of the commodity was used by 1.0301, the meat animals industry; \$87 million by 14.0200, the creamery butter industry; \$7,105 million by 14.0300, the natural, processed, and imitation cheese industry; \$1,618 million by 14.0400, the dry, condensed, and evaporated dairy products industry; \$490 million by 14.0500, the ice cream and frozen desserts industry; \$10,027 million by 14.0600, the fluid milk industry; \$78 million was sold to 91.0000, PCE; \$44 million went to 93.0000, change in business inventories; \$42 million went to 94.0000, exports; and \$28 million was from 95.0000, imports.

The use table for industries

The use table for industries (table 2B (columns) of the "Detailed Tables") shows the industries and the commodities and value added components that they used, in millions of dollars at producers' prices, for six-digit industries and commodities. This table presents information that corresponds to that presented in the columns in the summary I-O use table (tables 2.1 and 2.2 of the "Summary Tables").

The information for each industry is contained in three columns. The first column shows the I-O code for a six-digit industry or final user. The second column shows the I-O codes for the six-digit commodities and value added components that were used. The third column shows the total value of the commodities and value added that the industry used and then the values for each commodity and value added component. For example, the first entry in the table shows, in the first column, the six-digit

industry 1.0100, dairy farm products. The second and third columns show that this industry used 80 different commodities and 3 value added components to produce its output. For example, of the \$20,285 million in *commodities* and *value added* that it used, \$48 million was in food grains, 2.0201; \$7,878 million in feed grains, 2.0202; \$1,001 million in agricultural, forestry, and fishery services, 4.0001; \$1,212 million in compensation of employees, 88.0000; and \$2,055 million in other value added, 90.0000, which includes components such as consumption of fixed capital, corporate profits, and business transfer payments.

Commodity output requirements for each commodity

The commodity requirements for each commodity table (table 4A of the "Detailed Tables") shows the six-digit commodities that were required directly and indirectly to deliver a dollar of a commodity to final users. This table presents information that corresponds to that presented in the summary I-O commodity-by-commodity total requirements table (table 4 of the "Summary Tables"); however, this table presents only the 15 largest required commodities and an "all other" category that summarizes the requirements for the remaining commodities.²⁷ For a majority of the commodities, the largest 15 required account for at least 80 percent of the total requirements. At the maximum, the "all other" category accounts for approximately 33 percent of the total multiplier (for I-O 11.0101, new residential 1-unit-structures, nonfarm). The largest coefficient in any "all other" category is 0.02989 (for I-O 34.0301, leather gloves and mittens, where it accounts for slightly more than 1 percent of the multiplier). The coefficients in this table are referred to as "commodity-by-commodity total requirements coefficients."

The information for each commodity is contained in three columns. The first column shows the I-O code for the six-digit commodity that was delivered to final users. The second column shows the I-O codes for the 15 largest six-digit commodities that were required directly and indirectly to deliver a dollar of this commodity to final users. The third column shows the total commodity output required to deliver a dollar of the commodity listed in the first column to final users, and then the requirements for the 15 commodities and the "all other" group that appear in the second column. For example, the first entry in the table shows, in the first column, the six-digit *commodity* 1.0100, dairy farm products, that was delivered

27. Multipliers for all commodities are contained on the diskettes offered for sale; see the box "Data Availability" on page M-3.

to final users. The second column shows that among the *commodities* required to deliver a dollar of this commodity to final users were, for example, 1.0100, dairy farm products; 2.0202, feed grains; and 4.0001, agricultural, forestry, and fishery services. The third column shows that the total *commodity* output required to deliver a dollar of the *commodity* dairy farm products was \$2.74911. The requirements for dairy farm products were \$1.00032; for feed grains, \$0.42183; for agricultural, forestry, and fishery services, \$0.08312; and for "all other," \$0.50560.

Industry output requirements for each commodity

The industry output requirements for each commodity table (table 5A of the "Detailed Tables") shows the output required directly and indirectly from each industry to deliver a dollar of a commodity to final users. This table presents information that corresponds to that presented in the summary I-O industry-by-commodity total requirements table (table 5 of the "Summary Tables"); however, this table presents only the 15 largest producing industries and an "all other" group, which summarizes the requirements for the remaining industries that produced output used in the commodity. For a majority of the commodities, the largest 15 required account for at least 80 percent of the total requirements. At the maximum, the "all other" category accounts for approximately 40 percent of the total multiplier (for I-O 14.3202, food preparations, n.e.c.). The largest coefficient in any "all other" category is 0.031253 (for I-O 1.0200, poultry and eggs, where it accounts for slightly more than 1 percent of the multiplier). The coefficients in this table are referred to as "industry-by-commodity total requirements coefficients."

The information for each industry is contained in three columns. The first column shows the I-O code for the six-digit commodity that was delivered to final users. The second column shows the I-O codes for the 15 largest six-digit industries that produced outputs used, directly and indirectly, in the production of the commodity listed in the first column. The third column shows the total industry output multiplier, which is the total amount of industry output required to deliver a dollar of the commodity listed in the first column to final users, and then the requirements for the 15 largest industries and the "all other" group that appear in the second column. For example, the first entry in the table shows, in the first column, the six-digit *commodity* 1.0100, dairy farm products, which was delivered to final users. The second column shows, for example, that the *industries* 1.0100, dairy farm products; 2.0202, feed grains; and 2.0600, oil bearing crops,

produced outputs used in the production of this commodity. The third column shows that the total *industry* output required to deliver a dollar of the *commodity* dairy farm products was \$2.74320. Of this, the dairy farm products industry was required to produce \$1.00083; feed grains, \$0.42383; oil bearing crops, \$0.03120; and "all other" industries, \$0.51927.

I-O commodity composition of NIPA PCE

The I-O commodity composition of NIPA PCE table (table D.1 of the "Detailed Tables") shows the six-digit I-O commodity composition of each NIPA PCE category (as listed by line number code in NIPA table 2.4) in millions of dollars valued at producers' prices. The table also provides information by six-digit I-O code for transportation costs and wholesale and retail trade margins for the sum of the commodities within each PCE category. By providing these costs and margins, the table provides a bridge between I-O commodities valued in producers' prices and NIPA PCE valued in purchasers' prices. This table presents information that corresponds to that presented in the summary I-O commodity composition of PCE table (table D, beginning on page M-18).

The information for each PCE category is contained in two columns under each NIPA code number and title. The first column shows the six-digit codes for the I-O commodities, transportation costs, and wholesale and retail trade margins that constituted the NIPA category. The second column shows, as the first entry, the total for the I-O commodity composition of the NIPA PCE category valued in purchasers' prices; this total is composed of the sum of the commodities valued in producers' prices and the transportation costs and trade margins in the category. The second entry is the total for the six-digit I-O commodities valued in producers' prices. This entry is followed by the values for the individual commodities, the total for transportation costs and for wholesale and retail trade margins, and the values for the individual transportation costs and wholesale and retail trade margins for the NIPA category.

For example, the first entry in the table shows the NIPA code 3 and category title "Food purchased for off-premise consumption (n.d.)." As shown in the first column, in 1992 this category consisted of I-O *commodities* such as 1.0200, poultry and eggs; 2.0202, feed grains; 2.0401, fruits; and *transportation costs* and *trade margins* such as 65.0100, railroads and related services, and 69.0100, wholesale trade. The second column shows that the total value of the commodities in the NIPA category, in purchasers' prices, was \$413,709 million. The total value of the six-digit commodities in the category, in pro-

ducers' prices, was \$259,465 million, which consisted of \$1,866 million for poultry and eggs, \$354 million for feed grains, \$6,626 million for fruits, and so on down the column. The entry for transportation costs and trade margins shows that they totaled \$154,244 million and consisted of \$1,208 million for railroads and related services, \$43,688 million for wholesale trade, and so on.

I-O commodity composition of NIPA PDE expenditures

The I-O commodity composition of NIPA PDE expenditures table (table E.1 of the "Detailed Tables") shows the six-digit I-O commodity composition of each NIPA PDE category (as listed by line number code in NIPA table 5.8) in millions of dollars valued at producers' prices. The table also provides information by six-digit I-O code for transportation costs and wholesale and retail trade margins for the sum of the commodities within each PDE category. By providing these costs and margins, the table provides a bridge between I-O commodities valued in producers' prices and NIPA PDE valued in purchasers' prices. This table presents information that corresponds to that presented in the summary I-O commodity composition of PDE expenditures table (table E, on page M-24).

The information for each PDE category is contained in two columns under each NIPA code number and title. The first column shows the six-digit codes for the I-O commodities, transportation costs, and wholesale and retail trade margins that constituted the NIPA category. The

second column shows, as the first entry, the total for the I-O commodity composition of the NIPA PDE category valued in purchasers' prices; this total is composed of the sum of the commodities valued in producers' prices and the transportation costs and trade margins in the category. The second entry is the total for the six-digit I-O commodities valued in producers' prices. This entry is followed by the values for the individual commodities, the total for transportation costs and for wholesale and retail trade margins, and the values for the individual transportation costs and wholesale and retail trade margins for the NIPA category.

For example, the first entry in the table shows the NIPA code 5 and title "Computers and peripheral equipment." As shown in the first column, in 1992 this category consisted of the I-O *commodities* 51.0103, electronic computers; 51.0104, computer peripheral equipment; 73.0104, computer and data processing services; and *transportation costs* and *trade margins* such as 65.0100, railroads and related services, and 69.0100, wholesale trade. The second column shows that the total value of the commodities in the NIPA category, in purchasers' prices, was \$43,580 million. The total value of the six-digit commodities in the category, in producers' prices, was \$36,139 million, which consisted of \$15,819 million for electronic computers and \$16,879 million for computer peripheral equipment, and \$3,441 million for computer and data processing services. The entry for transportation costs and trade margins shows that they totaled \$7,441 million and consisted of \$2 million for railroads and related services, \$5,934 million for wholesale trade, and so on.

Appendix A

Classification of Industries in the 1992 Benchmark Input-Output Accounts

[The titles in boldface represent the industries used for the summary version of the 1992 tables. An asterisk preceding a Standard Industrial Classification (SIC) code indicates that the SIC industry is included in more than one I-O industry. For a description of the systems used in the I-O accounts, see the section "Definitions and conventions for classification."]

1. The SIC assigns the same codes to the activities regardless of whether the establishment is owned by private firms and government agencies, but the SIC codes in the I-O accounts are only used for classifying private activities.

2. Noncomparable imports include imported services that are not commercially produced in the United States, and goods and services that are produced abroad and used abroad by U.S. residents—for example, U.S. Federal Government defense spending abroad.

3. Industry output is zero because there is no primary producing industry. Scrap is a secondary product of many industries, and used goods are sales and purchases typically between final uses. The sales are shown as negative values in the use table.

4. Industry output is defined as the compensation of employees and consumption of fixed capital of general government agencies. The compensation of employees engaged in construction work is included in the construction industry.

5. The commodity entries include adjustments among PCE and government expenditures to eliminate counting the expenditures by foreign residents in both exports and PCE or government expenditures.

6. Industry output is defined as the compensation of domestic household workers.

7. The inventory valuation adjustment is an adjustment needed to eliminate inventory profits or losses from the change in inventory component of gross output.

Appendix B

Classification of Value Added and Final Uses in the 1992 Benchmark Input-Output Accounts

[The titles in boldface represent the value added and final use components used for the summary version of the 1992 tables.]

I-O number	I-O title	I-O number	I-O title
VALUE ADDED		99C State and local government consumption expenditures, other:	
VA	Total value added:	99.10C1	State and local government consumption expenditures, hospitals and categorical health programs
88.0000	Compensation of employees	99.10C2	State and local government consumption expenditures, public welfare institutions and activities
89.0000	Indirect business tax and nontax liability	99.10C4	State and local government consumption expenditures, sanitation
90.0000	Other value added	99.20C1	State and local government consumption expenditures, police
FINAL USES		99.20C2	State and local government consumption expenditures, fire fighting organizations and auxiliary services

Appendix C

Measures of Output

This appendix supplements information provided in table A in the text, which shows the principal data sources used for industry and commodity outputs for the 1992 benchmark input-output (I-O) accounts. The tables in this appendix provide detailed information on the measures of industry and commodity output used for the 1992 I-O accounts. For each major I-O industry group, a description of the most important definitions and conventions used to derive output is provided. The tables that follow show how industry output is derived on an "approximate" Standard Industrial Classification (SIC) basis (the basis on which most source data are available) and how this measure is converted to the "traditional" I-O basis.¹ It also shows how commodity output is derived.

Generally, industry output includes all production of establishments classified in an industry as listed in appendix A, beginning on page M-32, and commodity output includes all production of a commodity regardless of the industry that produces it. As noted in the text, although the I-O industries are based on SIC industries, I-O industries reflect numerous redefinitions and reclassifications that are necessary for preparing the total requirements tables.²

The measures of industry and commodity output for the I-O accounts are prepared from different types of source data—value of shipments, receipts or revenue, and operating expenses. Value-of-shipments data, adjusted for changes in inventories, are used for goods-producing industries and their related commodities. Receipts or revenue data from goods and services sold are used for most other industries; these data are combined with data on receipts by type of service for the related commodities. A special case is the output of the wholesale and retail trade industries, which is measured generally as the difference between receipts or revenues and the cost of goods sold—this difference is referred to as "margin."

1. For the 1992 benchmark, the Bureau of Economic Analysis expanded the I-O accounts to include an "alternative" set of industry estimates that are based more closely on the SIC system. For a discussion of the new I-O estimates, see the box "Alternative I-O Tables" on page M-6.

2. For a discussion of I-O adjustment to SIC-based data, see the section "Definitions and conventions for classification" on page M-14.

Expense data are used to estimate output when either value-of-shipments data and receipts or revenue data are not available or when output is defined as expenses (for example, the output of nonprofit institutions that serve households).

The tables in this appendix provide information in two columns. The first column shows how industry output is calculated both on an approximate SIC basis and on a traditional I-O basis. The second column shows how commodity output is derived; there is no distinction between SIC-based and I-O-based commodity output. For example, in the table for industry "14. Food and kindred products," which is part of major industry group "Manufacturing," the first column shows that the measure for SIC-based industry output is based on industry shipments, including miscellaneous receipts, adjusted for the change in inventories of work-in-process and finished goods. Estimates for undercoverage of source data, for services provided to foreign affiliates, and for manufacturers' excise taxes are then added, and an estimate for the cost of merchandise resales is subtracted to derive SIC-based industry output.

The traditional measure of I-O industry output for food and kindred products requires four additional adjustments to the SIC-based output measure. These include adding the output for custom slaughter of meat animals (moved from agricultural, forestry, and fishery services, I-O 4), for food processing by wholesalers (moved from wholesale trade, I-O 69A), and for production of bakery products by retailers (moved from retail trade, I-O 69B); and subtracting the margin on merchandise resales (moved to wholesale trade, I-O 69A).

The second column of each table shows how commodity output is derived. Continuing with the same example, the second column shows that the commodity estimate starts with commodity shipments, plus miscellaneous receipts and change in inventories of work-in-process and finished goods. In this case, most of the adjustments to derive the measure of commodity output are similar to those required to derive the measure of I-O industry out-

put, although the industry and commodity measures are not equivalent.

I-O 1-4 Agriculture, Forestry, and Fisheries

The industry measure of agriculture, forestry, and fisheries output is activity-based rather than establishment-based. This measure is used because the quality of the

data by commodity or product is believed to be better than that available by type of establishment or farm.

When output of agriculture, forestry, and fisheries is estimated on an activity basis, two assumptions are made. First, it is assumed that each agricultural commodity is produced by a single industry. For example, the dairy farm products industry is assumed to produce all milk. Second, it is assumed that agriculture industries produce some secondary products that must be estimated and included in the output measure. For example, the dairy

1. Livestock and livestock products

Cash marketings of products
Plus: Change in inventories of finished products
 Farm-home consumption*
 Recreational services
 Custom work
 Custom feeding fees
 Interfarm, intrastate shipments of livestock

Equals: SIC-based industry output

Equals: I-O industry output

I-O industry output

Less: Fur pelts (included in I-O 3)

Custom work (included in I-O 4)

Farm-home consumption* (included in I-O 14)

Processed bulk milk and packaged milk (included in I-O 14)

Slaughtering and processing of meat (included in I-O 14)

Recreational services (included in I-O 76)

Equals: Commodity output

2. Other agricultural products

Cash marketings of products
Plus: Change in inventories of finished products (including CCC collateral)
 Farm-home consumption*
 Produced and consumed feed and seed*
 Recreational services
 Custom work
 Farm product warehousing and storage for CCC
 Forest products (including stumpage, Christmas trees, saw logs, and firewood)

Less: Net CCC loans

Equals: SIC-based industry output

Equals: I-O industry output

I-O industry output

Less: Forest products (included in I-O 3)

Custom work (included in I-O 4)

Saw logs and firewood (included in I-O 20+21)

Farm product warehousing and storage for CCC (included in I-O 65B)

Recreational services (included in I-O 76)

Equals: Commodity output

3. Forestry and fishery products

Stumpage, less government production (split between I-O's 2 and 3)
Plus: Christmas trees (split between I-O's 2 and 3)
 Game preserve products
 Forest nursery products
 Forest products (split between I-O's 2 and 3)
 Fishery landings

Equals: SIC-based industry output

Equals: I-O industry output

I-O industry output

Plus: Fur pelts (from I-O 1)

Forest products (from I-O 2)

Equals: Commodity output

4. Agricultural, forestry, and fishery services

Poultry hatcheries
 Agricultural services
 Forestry services
 Fish hatcheries
 Landscape and horticultural services
Plus: Employee tips
 Landscaping services provided by construction establishments (redefined from I-O 11)
Less: Cost of merchandise resales
Equals: SIC-based industry output
Plus: Farm product preparation services (redefined from I-O 69A)
 Service receipts and labor charges (redefined from 69A)
 Grooming and boarding of pets at pet shops (redefined from I-O 69B)
 Landscape services (redefined from I-O's 69B and 73B)
Less: Custom slaughter of meat animals (redefined to I-O 14)
 Margin on merchandise resales (redefined to I-O 69B)
Equals: I-O industry output

I-O industry output

Plus: Custom work (from I-O's 1 and 2)

Equals: Commodity output

* Imputation

farm industry is assumed to provide recreational services and custom work, as well as to produce food that is processed on farms and then is either consumed or sold by dairy farmers.

Agriculture, forestry, and fisheries output excludes the farm products produced by households and the value of fish and game caught for sport or personal use. It also excludes cash subsidies paid directly to farmers.

The forest products industry in other agricultural products (I-O 2) has no commodity output because its production is considered to be primary to other industries and is therefore moved to commodity groups in forestry and fishery products (I-O 3); agricultural, forestry, and fishery services (I-O 4); and lumber and wood products (I-O 20+21). See the section "Definitions and conventions for classification," beginning on page M-14, for details.

Agricultural, forestry, and fishery services (I-O 4) excludes veterinary services in both the SIC-based and I-O-based measures of industry output. The I-O accounts include these services in health services (I-O 77A).

I-O 5-10 Mining

The industry measure of mining output is based on the value of shipments, adjusted for changes in inventories of mined or quarried products. Shipments include primary and secondary products and miscellaneous re-

ceipts of establishments with payroll. Estimates are added for nonemployer establishments and for other economic activities not covered by the census of mineral industries—for example, receipts for research and development performed by auxiliaries and paid for by the Federal Government and services provided to foreign affiliates.³ Output excludes the cost of merchandise resales.

A number of activities defined as mining by the SIC system are defined as construction (I-O's 11 and 12) by the I-O classification system. The most important of these are mining operations to develop mineral properties—that is, activities resulting in permanent improvements to the mine site. For the "solid" mineral industries (I-O's 5+6, 7, and 9+10), the following activities are moved from mining to construction: Exploration work, including geophysical and other exploratory surveying; prospect and test drilling; and sinking mine shafts and driving mine tunnels. For the crude petroleum and natural gas industry (I-O 8), the following activities are moved from mining to construction: Cementing, surveying, and acidizing;

3. Two types of establishments are distinguished in the SIC: Operating establishments that primarily produce goods and services for personal or household use or for use by other enterprises, and auxiliary establishments that primarily perform management or support services within the same enterprise. For the I-O accounts, the only receipts of auxiliaries included in the measure of output are from federally funded research and development. The addition to output for services to foreign affiliates is for services included in the balance of payments accounts that are not captured as receipts in census data.

5+6. Metallic ores mining

Industry shipments, including miscellaneous receipts
Plus: Change in inventories of mined or quarried products
 Estimate of undercoverage of source data, including nonemployers
 Services provided to foreign affiliates
Less: Cost of merchandise resales
 Solid mineral exploration (redefined to I-O 11)
 New access structures (redefined to I-O 11)
***Equals:* SIC-based industry output**
Less: Margin on merchandise resales (redefined to I-O 69A)
***Equals:* I-O industry output**

Commodity shipments
Plus: Miscellaneous receipts
 Change in inventories of mined or quarried products
 Estimate of undercoverage of source data, including nonemployers
 Services provided to foreign affiliates
Less: Cost of merchandise resales
 Solid mineral exploration (included in I-O 11)
 New access structures (included in I-O 11)
 Margin on merchandise resales (included in I-O 69A)
***Equals:* Commodity output**

7. Coal mining

Industry shipments, including miscellaneous receipts
Plus: Change in inventories of mined or quarried products
 Estimate of undercoverage of source data, including nonemployers
 Federally-funded research and development at auxiliaries
 Services provided to foreign affiliates
Less: Cost of merchandise resales
 Solid mineral exploration (redefined to I-O 11)
 New access structures (redefined to I-O 11)
***Equals:* SIC-based industry output**
Less: Margin on merchandise resales (redefined to I-O 69A)
***Equals:* I-O industry output**

Commodity shipments
Plus: Miscellaneous receipts
 Change in inventories of mined or quarried products

***Equals:* Commodity output**

8. Crude petroleum and natural gas

Industry shipments, including miscellaneous receipts
Plus: Change in inventories of mined or quarried products
 Estimate of undercoverage of source data, including nonemployers
 Services provided to foreign affiliates
 Force-account construction activity*
Less: Cost of merchandise resales
 Oil and gas well drilling (redefined to I-O 11)
 Oil and gas well repair and maintenance (redefined to I-O 12)
Equals: SIC-based industry output
Less: Margin on merchandise resales (redefined to I-O 69A)
Equals: I-O industry output

Commodity shipments
Plus: Miscellaneous receipts
 Change in inventories of mined or quarried products
 Estimate of undercoverage of source data, including nonemployers
 Services provided to foreign affiliates
Less: Cost of merchandise resales
 Oil and gas well drilling (included in I-O 11)
 Ethane, propane, butane, gas mixtures, and other natural gas liquids (included in I-O 31)
 Margin on merchandise resales (included in I-O 69A)
Equals: Commodity output

9+10. Nonmetallic minerals mining

Industry shipments, including miscellaneous receipts
Plus: Change in inventories of mined or quarried products
 Estimate of undercoverage of source data, including nonemployers
 Services provided to foreign affiliates
Less: Cost of merchandise resales
 Solid mineral exploration (redefined to I-O 11)
 New access structures (redefined to I-O 11)
Equals: SIC-based industry output
Less: Margin on merchandise resales (redefined to I-O 69A)

Equals: I-O industry output

Commodity shipments
Plus: Miscellaneous receipts
 Change in inventories of mined or quarried products
 Estimate of undercoverage of source data, including nonemployers
 Services provided to foreign affiliates
Less: Cost of merchandise resales
 Solid mineral exploration (included in I-O 11)
 New access structures (included in I-O 11)
 Potash, soda, and borate minerals (included in I-O 27A)
 Processed feldspar, mica, talc, and gypsum (included in I-O 36)
 Barite (included in I-O 36)
 Margin on merchandise resales (included in I-O 69A)
Equals: Commodity output

* Imputation

hydrofracturing; perforating casings; running; cutting; and drilling-in. Drilling operations, such as pumping wells and installation of equipment, are considered to be mining activities and remain in mining.

The margins from reselling activities are moved from mining to wholesale trade (I-O 69A) for I-O-based measures of output. Also, when a product is made by both a mining industry and by a manufacturing industry, the output remains in the industry where it is produced, but the commodity is considered to be a manufacturing commodity. For example, the industry output of processed feldspar is included in the nonmetallic minerals mining industry (I-O 9+10), but the commodity output is included in the manufacturing commodity stone and clay products (I-O 36).

I-O 11-12 Construction

The industry measure of construction output is activity-based. All construction work is assumed to be performed by the construction industry, and all other activities of construction industries are moved to other industries. Therefore, industry output and commodity output are the same for construction.

Construction output is measured by type of project or building. It includes receipts from contract construction as well as estimates of force-account construction—that is, construction activities performed by an establish-

ment's own employees.⁴ Adjustments are made to exclude double-counting of subcontractors in the source data and to include receipts not reported in the source data, such as the receipts of nonemployers.

Construction includes both new construction and maintenance and repair construction. It includes installations of elevators and other similar structural components, as well as sidewalks, roads, and utility connections, plus plumbing, heating, and electrical work. For utilities, construction estimates are based on data reported to regulatory agencies and include what is designated as structures for those reports. Construction also includes certain types of equipment, such as boilers and overhead traveling cranes, and site-fabricated equipment that is not housed in a building, such as a petroleum refinery or comparable chemical plant. Output also includes various mining-related activities, such as drilling and exploration and improvements to mine sites, which are defined as construction by the I-O classification system and as mining by the SIC system. Engineering and architectural services that are capitalized are also included in new construction output.

4. Force-account construction also includes new residential construction activities by households.

Contract construction receipts <i>Plus:</i> Force-account construction activity* Revenues of land subdividers and developers Estimate of undercoverage of source data, including nonemployers Engineering and architectural services included in value of construction New construction activities excluded from mining industries (from I-O's 5+6, 7, 8, and 9+10) Installation receipts of manufacturers (redefined from I-O's 22+23, 36, 40, 46, 49, and 52) Construction and installation work by wholesalers and retailers (redefined from I-O's 69A and 69B) Construction receipts of engineering, architectural, and surveying establishments (redefined from I-O 73B) <i>Less:</i> Cost of merchandise resales Double counting of subcontractors Landscaping services (redefined to I-O 4) Millwork (redefined to I-O 20+21) Paving mixtures (redefined to I-O 31) Concrete products and ready-mix concrete (redefined to I-O 36) Fabricated structural metal and sheet metal work (redefined to I-O 40) Trucking receipts (redefined to I-O 65B) Margin on merchandise resales (redefined to I-O's 69A and 69B) Property management receipts (redefined to I-O 71B) Engineering and architectural services (redefined to I-O 73B) Equipment rental (redefined to I-O 73C) <i>Equals:</i> SIC-based industry output <i>Equals:</i> I-O industry output	I-O industry output <i>Equals:</i> Commodity output

--	---

I-O 13-64 Manufacturing

5. For a few industries, the value of production is reported rather than the value of shipments in the census of manufactures; for these industries, an adjustment is made to finished product inventories to convert back to a shipments concept. For the 1992 census of manufactures, the value of production was reported for the following SIC industries: 2032, 2033, 2035, 2037, 2038, 2085, 2091, 2092, 2111, 2121, 2131, 2141, and 3731.

The I-O-based and SIC-based measures of manufacturing industry output are significantly different for some industries. These industries include food and kindred products (I-O 14), where bakery products produced by grocery stores and retail bakeries and prepared animal feeds mixed by wholesalers are included in the I-O measure of industry output but not in the SIC-based measure; and broad and narrow fabrics, yarn and thread mills (I-O 16), where commission finishing by wholesalers is included in the I-O measure but not in the SIC-based measure. Additionally, margins on reselling activities are

moved to wholesale trade (I-O 69A) for the I-O measure but not for the SIC-based measure.

The commodity measure of manufacturing output is generally based on value of shipments wherever made, adjusted for change in inventories. It excludes sales of scrap, which are moved to the commodity scrap (I-O 81).

By convention, some manufacturing commodities have no output because they are considered to be primary products of other industries, and therefore their outputs are moved to the commodity groups of the primary-producing industries. See the section "Definitions and conventions for classification," beginning on page M-14, for more details. These manufacturing commodities include the following: Knit outerwear mills, knit underwear and nightwear mills, and knitting mills, n.e.c.,

are moved to apparel made from purchased materials, another detailed commodity group within apparel (I-O 18), and to housefurnishings, n.e.c., a detailed commodity group within miscellaneous fabricated textile products (I-O 19); fertilizers, mixing only, is moved to nitrogenous and phosphatic fertilizers, both of which are in agricultural fertilizers and chemicals (I-O 27B); cold-rolled steel sheet, strip, and bars and steel pipe and tubes are moved to blast furnaces and steel mills, all of which are included in primary iron and steel manufacturing (I-O 37); and secondary nonferrous metals are moved to primary smelting and refining of copper, primary aluminum, and primary nonferrous metals, n.e.c., and copper foundries and nonferrous castings, n.e.c., are moved to aluminum castings, all of which are included in primary nonferrous metals manufacturing (I-O 38).

13. Ordnance and accessories

Industry shipments, including miscellaneous receipts
Plus: Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Federally-funded research and development at auxiliaries
 Services provided to foreign affiliates
 Manufacturers' excise taxes
Less: Cost of merchandise resales
Equals: SIC-based industry output
Less: Margin on merchandise resales (redefined to I-O 69A)
Equals: I-O industry output

Commodity shipments
Plus: Miscellaneous receipts
 Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers

 Services provided to foreign affiliates
 Logs and bolts*
 Saw logs and firewood (from I-O 2)
 Bark and mill residue (from I-O 24)
 Millwork (from I-O's 11 and 69A)
Less: Cost of merchandise resales
 Margin on merchandise resales (included in I-O 69A)
 Sales of scrap and refuse (included in I-O 81)
***Equals:* Commodity output**

22+23. Furniture and fixtures

Industry shipments, including miscellaneous receipts
Plus: Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Services provided to foreign affiliates
Less: Cost of merchandise resales
 Installation receipts (redefined to I-O 11)
Equals: SIC-based industry output
Plus: Installation receipts of wholesalers (redefined from I-O 69A)
Less: Margin on merchandise resales (redefined to I-O 69A)
Equals: I-O industry output

Commodity shipments
Plus: Miscellaneous receipts
 Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Services provided to foreign affiliates
 Installation receipts of wholesalers (from I-O 69A)
Less: Cost of merchandise resales
 Installation receipts (included in I-O 11)
 Margin on merchandise resales (included in I-O 69A)
 Sales of scrap and refuse (included in I-O 81)
Equals: Commodity output

24. Paper and allied products, except containers

Industry shipments, including miscellaneous receipts
Plus: Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Federally-funded research and development at auxiliaries
 Services provided to foreign affiliates
 Manufacturers' excise taxes
Less: Cost of merchandise resales
Equals: SIC-based industry output
Plus: Service receipts of wholesalers (redefined from I-O 69A)
Less: Margin on merchandise resales (redefined to I-O 69A)
Equals: I-O industry output

Commodity shipments
Plus: Miscellaneous receipts
 Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Federally-funded research and development at auxiliaries
 Services provided to foreign affiliates
 Manufacturers' excise taxes
 Service receipts of wholesalers (from I-O 69A)
Less: Cost of merchandise resales
 Bark and mill residue (included in I-O 20+21)
 Margin on merchandise resales (included in I-O 69A)
 Sales of scrap and refuse (included in I-O 81)
Equals: Commodity output

25. Paperboard containers and boxes

Industry shipments, including miscellaneous receipts
Plus: Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Services provided to foreign affiliates
Less: Cost of merchandise resales
Equals: SIC-based industry output
Less: Margin on merchandise resales (redefined to I-O 69A)
Equals: I-O industry output

Commodity shipments
Plus: Miscellaneous receipts
 Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Services provided to foreign affiliates
Less: Cost of merchandise resales
 Margin on merchandise resales (included in I-O 69A)
 Sales of scrap and refuse (included in I-O 81)
Equals: Commodity output

26A. Newspapers and periodicals

Industry shipments, including miscellaneous receipts
Plus: Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Services provided to foreign affiliates
Less: Cost of merchandise resales
Equals: SIC-based industry output
Less: Margin on merchandise resales (redefined to I-O 69A)
Equals: I-O industry output

Commodity shipments
Plus: Miscellaneous receipts
 Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Services provided to foreign affiliates
Less: Cost of merchandise resales
 Margin on merchandise resales (included in I-O 69A)
 Advertising receipts (included in I-O 73D)
 Sales of scrap and refuse (included in I-O 81)
Equals: Commodity output

26B. Other printing and publishing

Industry shipments, including miscellaneous receipts
Plus: Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Services provided to foreign affiliates
Less: Cost of merchandise resales
Equals: SIC-based industry output
Plus: Printing by wholesalers (redefined from I-O 69A)
Less: Margin on merchandise resales (redefined to I-O 69A)
Equals: I-O industry output

Commodity shipments
Plus: Miscellaneous receipts
 Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Services provided to foreign affiliates
 Printing by wholesalers (from I-O 69A)
 Printing by direct mail advertisers (from I-O 73C)
Less: Cost of merchandise resales
 Margin on merchandise resales (included in I-O 69A)
 Lithographic printing of advertising, including calendar, map, and newspaper (included in I-O 73D)
 Telephone directory, shopping news, catalog, and directory printing and publishing (included in I-O 73D)
 Letterpress and screen printing for advertising (included in I-O 73D)
 Sales of scrap and refuse (included in I-O 81)
Equals: Commodity output

27A. Industrial and other chemicals

Industry shipments, including miscellaneous receipts
Plus: Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Federally-funded research and development at auxiliaries
 Services provided to foreign affiliates
 Manufacturers' excise taxes
 Adjustment for government-owned, company-operated establishments
Less: Cost of merchandise resales
***Equals:* SIC-based industry output**
Less: Margin on merchandise resales (redefined to I-O 69A)

***Equals:* I-O industry output**

Commodity shipments
Plus: Miscellaneous receipts
 Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Federally-funded research and development at auxiliaries
 Services provided to foreign affiliates
 Manufacturers' excise tax
 Adjustment for government-owned, company-operated establishments
 Potash, soda, and borate minerals (from I-O 9+10)
 Aromatics and liquefied refinery gases, made in refineries, for chemical uses (from I-O 31)
 Coke oven tar (from I-O 37)
Less: Cost of merchandise resales
 Aromatics and liquefied refinery gases, not made in refineries, not for chemical uses (included in I-O 31)
 Aluminum oxide (included in I-O 38)
 Margin on merchandise resales (included in I-O 69A)
 Sales of scrap and refuse (included in I-O 81)
***Equals:* Commodity output**

27B. Agricultural fertilizers and chemicals

Industry shipments, including miscellaneous receipts
Plus: Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Services provided to foreign affiliates
 Manufacturers' excise taxes
Less: Cost of merchandise resales
***Equals:* SIC-based industry output**
Less: Margin on merchandise resales (redefined to I-O 69A)

***Equals:* I-O industry output**

Commodity shipments
Plus: Miscellaneous receipts
 Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Services provided to foreign affiliates
 Manufacturers' excise taxes
 Ammonia (from I-O 37)
Less: Cost of merchandise resales
 Margin on merchandise resales (included in I-O 69A)
 Sales of scrap and refuse (included in I-O 81)
***Equals:* Commodity output**

28. Plastics and synthetic materials

Industry shipments, including miscellaneous receipts
Plus: Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Federally-funded research and development at auxiliaries
 Services provided to foreign affiliates
 Manufacturers' excise taxes
Less: Cost of merchandise resales
***Equals:* SIC-based industry output**
Less: Margin on merchandise resales (redefined to I-O 69A)

***Equals:* I-O industry output**

Commodity shipments
Plus: Miscellaneous receipts
 Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Federally-funded research and development at auxiliaries
 Services provided to foreign affiliates
 Manufacturers' excise taxes
 Textured, crimped, or bulked filament yarns made from purchased yarns (from I-O 16)
Less: Cost of merchandise resales
 Margin on merchandise resales (included in I-O 69A)
 Sales of scrap and refuse (included in I-O 81)
***Equals:* Commodity output**

29A. Drugs

Industry shipments, including miscellaneous receipts
Plus: Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Federally-funded research and development at auxiliaries
 Services provided to foreign affiliates
 Manufacturers' excise taxes
Less: Cost of merchandise resales
***Equals:* SIC-based industry output**
Less: Margin on merchandise resales (redefined to I-O 69A)

***Equals:* I-O industry output**

Commodity shipments
Plus: Miscellaneous receipts
 Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Federally-funded research and development at auxiliaries
 Services provided to foreign affiliates
 Manufacturers' excise taxes
Less: Cost of merchandise resales
 Margin on merchandise resales (included in I-O 69A)
 Sales of scrap and refuse (included in I-O 81)
***Equals:* Commodity output**

29B. Cleaning and toilet preparations

Industry shipments, including miscellaneous receipts
Plus: Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Services provided to foreign affiliates
Less: Cost of merchandise resales
***Equals:* SIC-based industry output**
Less: Margin on merchandise resales (redefined to I-O 69A)
***Equals:* I-O industry output**

Commodity shipments
Plus: Miscellaneous receipts
 Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Services provided to foreign affiliates
Less: Cost of merchandise resales
 Margin on merchandise resales (included in I-O 69A)
 Sales of scrap and refuse (included in I-O 81)
***Equals:* Commodity output**

30. Paints and allied products

Industry shipments, including miscellaneous receipts
Plus: Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Services provided to foreign affiliates
Less: Cost of merchandise resales
***Equals:* SIC-based industry output**
Less: Margin on merchandise resales (redefined to I-O 69A)
***Equals:* I-O industry output**

Commodity shipments
Plus: Miscellaneous receipts
 Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Services provided to foreign affiliates
Less: Cost of merchandise resales
 Margin on merchandise resales (included in I-O 69A)
***Equals:* Commodity output**

31. Petroleum refining and related products

Industry shipments, including miscellaneous receipts
Plus: Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Federally-funded research and development at auxiliaries
 Services provided to foreign affiliates
 Paving mixtures (redefined from I-O 11)
Less: Cost of merchandise resales
***Equals:* SIC-based industry output**
Less: Margin on merchandise resales (redefined to I-O 69A)

***Equals:* I-O industry output**

Commodity shipments
Plus: Miscellaneous receipts
 Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Federally-funded research and development at auxiliaries
 Services provided to foreign affiliates
 Ethane, propane, butane, gas mixtures, and other natural gas liquids (from I-O 8)
 Paving mixtures (from I-O 11)
 Aromatics and liquefied refinery gases, not made in refineries, not for chemical uses (from I-O 27A)
Less: Cost of merchandise resales
 Aromatics and liquefied refinery gases, made in refineries, for chemical uses (included in I-O 27A)
 Margin on merchandise resales (included in I-O 69A)
 Sales of scrap and refuse (included in I-O 81)
***Equals:* Commodity output**

32. Rubber and miscellaneous plastics products

Industry shipments, including miscellaneous receipts
Plus: Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Federally-funded research and development at auxiliaries
 Services provided to foreign affiliates
 Manufacturers' excise taxes
Less: Cost of merchandise resales
***Equals:* SIC-based industry output**
Less: Margin on merchandise resales (redefined to I-O 69A)
***Equals:* I-O industry output**

Commodity shipments
Plus: Miscellaneous receipts
 Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Federally-funded research and development at auxiliaries
 Services provided to foreign affiliates
 Manufacturers' excise taxes
Less: Cost of merchandise resales
 Margin on merchandise resales (included in I-O 69A)
 Sales of scrap and refuse (included in I-O 81)
***Equals:* Commodity output**

33+34. Footwear, leather, and leather products

Industry shipments, including miscellaneous receipts
Plus: Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
Less: Cost of merchandise resales
***Equals:* SIC-based industry output**
Less: Margin on merchandise resales (redefined to I-O 69A)
***Equals:* I-O industry output**

Commodity shipments
Plus: Miscellaneous receipts
 Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
Less: Cost of merchandise resales
 Margin on merchandise resales (included in I-O 69A)
***Equals:* Commodity output**

35. Glass and glass products

Industry shipments, including miscellaneous receipts
Plus: Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Services provided to foreign affiliates
Less: Cost of merchandise resales
***Equals:* SIC-based industry output**
Less: Margin on merchandise resales (redefined to I-O 69A)
***Equals:* I-O industry output**

Commodity shipments
Plus: Miscellaneous receipts
 Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Services provided to foreign affiliates
Less: Cost of merchandise resales
 Margin on merchandise resales (included in I-O 69A)
 Sales of scrap and refuse (included in I-O 81)
***Equals:* Commodity output**

36. Stone and clay products

Industry shipments, including miscellaneous receipts
Plus: Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Federally-funded research and development at auxiliaries
 Services provided to foreign affiliates
 Concrete products and ready-mix concrete (redefined from I-O 11)
Less: Cost of merchandise resales
 Installation receipts (redefined to I-O 11)
***Equals:* SIC-based industry output**
Less: Margin on merchandise resales (redefined to I-O 69A)

***Equals:* I-O industry output**

Commodity shipments
Plus: Miscellaneous receipts
 Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Federally-funded research and development at auxiliaries
 Services provided to foreign affiliates
 Processed feldspar, mica, talc, and gypsum (from I-O 9+10)
 Barite (from I-O 9+10)
 Concrete products and ready-mix concrete (from I-O 11)
 South Dakota Cement Plant sales (from I-O 79)
Less: Cost of merchandise resales
 Installation receipts (included in I-O 11)
 Margin on merchandise resales (included in I-O 69A)
 Sales of scrap and refuse (included in I-O 81)
***Equals:* Commodity output**

37. Primary iron and steel manufacturing

Industry shipments, including miscellaneous receipts
Plus: Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Federally-funded research and development at auxiliaries
 Services provided to foreign affiliates
Less: Cost of merchandise resales
***Equals:* SIC-based industry output**
Less: Margin on merchandise resales (redefined to I-O 69A)

***Equals:* I-O industry output**

Commodity shipments
Plus: Miscellaneous receipts
 Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Federally-funded research and development at auxiliaries
 Services provided to foreign affiliates
Less: Cost of merchandise resales
 Coke oven tar (included in I-O 27A)
 Ammonia (included in I-O 27B)
 Ferrous wire products made in wiredrawing plants (included in I-O 42)
 Coke oven gas (included in I-O 68B)
 Margin on merchandise resales (included in 69A)
 Sales of scrap and refuse (included in I-O 81)
***Equals:* Commodity output**

38. Primary nonferrous metals manufacturing

Industry shipments, including miscellaneous receipts
Plus: Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Federally-funded research and development at auxiliaries
 Services provided to foreign affiliates
Less: Cost of merchandise resales
***Equals:* SIC-based industry output**
Less: Margin on merchandise resales (redefined to I-O 69A)

***Equals:* I-O industry output**

Commodity shipments
Plus: Miscellaneous receipts
 Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Federally-funded research and development at auxiliaries
 Services provided to foreign affiliates
 Aluminum oxide (from I-O 27A)
 Apparatus wire and cordage (from I-O 58)
Less: Cost of merchandise resales
 Nonferrous wire cloth (included in I-O 42)
 Margin on merchandise resales (included in I-O 69A)
 Sales of scrap and refuse (included in I-O 81)
***Equals:* Commodity output**

39. Metal containers

Industry shipments, including miscellaneous receipts
Plus: Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Services provided to foreign affiliates
Less: Cost of merchandise resales
***Equals:* SIC-based industry output**
Less: Margin on merchandise resales (redefined to I-O 69A)
***Equals:* I-O industry output**

Commodity shipments
Plus: Miscellaneous receipts
 Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Services provided to foreign affiliates
Less: Cost of merchandise resales
 Margin on merchandise resales (included in I-O 69A)
***Equals:* Commodity output**

40. Heating, plumbing, and fabricated structural metal products

Industry shipments, including miscellaneous receipts
Plus: Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Federally-funded research and development at auxiliaries
 Services provided to foreign affiliates
 Fabricated structural metal and sheet metal work (redefined from I-O 11)
Less: Cost of merchandise resales
 Installation receipts (redefined to I-O 11)
***Equals:* SIC-based industry output**
Less: Margin on merchandise resales (redefined to I-O 69A)
***Equals:* I-O industry output**

Commodity shipments
Plus: Miscellaneous receipts
 Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Federally-funded research and development at auxiliaries
 Services provided to foreign affiliates
 Fabricated structural metal and sheet metal work (from I-O 11)
Less: Cost of merchandise resales
 Installation receipts (included in I-O 11)
 Margin on merchandise resales (included in I-O 69A)
 Sales of scrap and refuse (included in I-O 81)
***Equals:* Commodity output**

41. Screw machine products and stampings

Industry shipments, including miscellaneous receipts
Plus: Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Services provided to foreign affiliates
Less: Cost of merchandise resales
***Equals:* SIC-based industry output**
Less: Margin on merchandise resales (redefined to I-O 69A)
***Equals:* I-O industry output**

Commodity shipments
Plus: Miscellaneous receipts
 Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Services provided to foreign affiliates
Less: Cost of merchandise resales
 Margin on merchandise resales (included in I-O 69A)
 Sales of scrap and refuse (included in I-O 81)
***Equals:* Commodity output**

42. Other fabricated metal products

Industry shipments, including miscellaneous receipts
Plus: Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Services provided to foreign affiliates
Less: Cost of merchandise resales
***Equals:* SIC-based industry output**
Plus: Service receipts (redefined from I-O 69A)
 Jewelry engraving (redefined from I-O 69B)
Less: Margin on merchandise resales (redefined to I-O 69A)
***Equals:* I-O industry output**

Commodity shipments
Plus: Miscellaneous receipts
 Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Services provided to foreign affiliates
 Ferrous wire products made in wiredrawing plants (from I-O 37)
 Nonferrous wire cloth (from I-O 38)
 Service receipts (from I-O 69A)
 Jewelry engraving (from I-O 69B)
Less: Cost of merchandise resales
 Margin on merchandise resales (included in I-O 69A)
 Sales of scrap and refuse (included in I-O 81)
***Equals:* Commodity output**

43. Engines and turbines

Industry shipments, including miscellaneous receipts
Plus: Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Services provided to foreign affiliates
Less: Cost of merchandise resales
***Equals:* SIC-based industry output**
Less: Margin on merchandise resales (redefined to I-O 69A)
***Equals:* I-O industry output**

Commodity shipments
Plus: Miscellaneous receipts
 Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Services provided to foreign affiliates
Less: Cost of merchandise resales
 Margin on merchandise resales (included in I-O 69A)
 Sales of scrap and refuse (included in I-O 81)
***Equals:* Commodity output**

44+45. Farm, construction, and mining machinery

Industry shipments, including miscellaneous receipts
Plus: Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Services provided to foreign affiliates
Less: Cost of merchandise resales
***Equals:* SIC-based industry output**
Less: Margin on merchandise resales (redefined to I-O 69A)
***Equals:* I-O industry output**

Commodity shipments
Plus: Miscellaneous receipts
 Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Services provided to foreign affiliates
Less: Cost of merchandise resales
 Margin on merchandise resales (included in I-O 69A)
 Equipment rental and leasing (included in I-O 73C)
 Sales of scrap and refuse (included in I-O 81)
***Equals:* Commodity output**

46. Materials handling machinery and equipment

Industry shipments, including miscellaneous receipts
Plus: Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Federally-funded research and development at auxiliaries
 Services provided to foreign affiliates
Less: Cost of merchandise resales
 Installation receipts (redefined to I-O 11)
***Equals:* SIC-based industry output**
Less: Margin on merchandise resales (redefined to I-O 69A)
***Equals:* I-O industry output**

Commodity shipments
Plus: Miscellaneous receipts
 Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Federally-funded research and development at auxiliaries
 Services provided to foreign affiliates
Less: Cost of merchandise resales
 Installation receipts (included in I-O 11)
 Margin on merchandise resales (included in I-O 69A)
 Sales of scrap and refuse (included in I-O 81)
***Equals:* Commodity output**

47. Metalworking machinery and equipment

Industry shipments, including miscellaneous receipts
Plus: Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Services provided to foreign affiliates
Less: Cost of merchandise resales
***Equals:* SIC-based industry output**
Plus: Installation receipts of wholesalers (redefined from I-O 69A)
Less: Margin on merchandise resales (redefined to I-O 69A)
***Equals:* I-O industry output**

Commodity shipments
Plus: Miscellaneous receipts
 Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Services provided to foreign affiliates
 Installation receipts of wholesalers (from I-O 69A)
Less: Cost of merchandise resales
 Margin on merchandise resales (included in I-O 69A)
 Sales of scrap and refuse (included in I-O 81)
***Equals:* Commodity output**

48. Special industry machinery and equipment

Industry shipments, including miscellaneous receipts
Plus: Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Federally-funded research and development at auxiliaries
 Services provided to foreign affiliates
Less: Cost of merchandise resales
***Equals:* SIC-based industry output**
Less: Margin on merchandise resales (redefined to I-O 69A)
***Equals:* I-O industry output**

Commodity shipments
Plus: Miscellaneous receipts
 Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Federally-funded research and development at auxiliaries
 Services provided to foreign affiliates
Less: Cost of merchandise resales
 Margin on merchandise resales (included in I-O 69A)
 Sales of scrap and refuse (included in I-O 81)
***Equals:* Commodity output**

49. General industrial machinery and equipment

Industry shipments, including miscellaneous receipts
Plus: Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Federally-funded research and development at auxiliaries
 Services provided to foreign affiliates
Less: Cost of merchandise resales
 Installation receipts (redefined to I-O 11)
***Equals:* SIC-based industry output**
Less: Margin on merchandise resales (redefined to I-O 69A)
***Equals:* I-O industry output**

Commodity shipments
Plus: Miscellaneous receipts
 Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Federally-funded research and development at auxiliaries
 Services provided to foreign affiliates
Less: Cost of merchandise resales
 Installation receipts (included in I-O 11)
 Margin on merchandise resales (included in I-O 69A)
 Sales of scrap and refuse (included in I-O 81)
***Equals:* Commodity output**

50. Miscellaneous machinery, except electrical

Industry shipments, including miscellaneous receipts
Plus: Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Federally-funded research and development at auxiliaries
 Services provided to foreign affiliates
Less: Cost of merchandise resales
***Equals:* SIC-based industry output**
Less: Margin on merchandise resales (redefined to I-O 69A)
***Equals:* I-O industry output**

Commodity shipments
Plus: Miscellaneous receipts
 Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemployers
 Federally-funded research and development at auxiliaries
 Services provided to foreign affiliates
Less: Cost of merchandise resales
 Margin on merchandise resales (included in I-O 69A)
 Sales of scrap and refuse (included in I-O 81)
***Equals:* Commodity output**

51. Computer and office equipment

Industry shipments, including miscellaneous receipts
Plus: Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including
 nonemployers
 Federally-funded research and development at auxiliaries
 Services provided to foreign affiliates
Less: Cost of merchandise resales
Equals: SIC-based industry output
Plus: Installation receipts of wholesalers (redefined from I-O 69A)
Less: Margin on merchandise resales (redefined to I-O 69A)

Equals: I-O industry output

Commodity shipments
Plus: Miscellaneous receipts
 Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemploy-
 ers
 Federally-funded research and development at auxiliaries
 Services provided to foreign affiliates
 Installation receipts of wholesalers (from I-O 69A)
Less: Cost of merchandise resales
 Margin on merchandise resales (included in I-O 69A)
 Computer-related services, including packaged software (in-
 cluded in I-O 73A)
 Sales of scrap and refuse (included in I-O 81)
Equals: Commodity output

52. Service industry machinery

Industry shipments, including miscellaneous receipts
Plus: Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including
 nonemployers
 Services provided to foreign affiliates
Less: Cost of merchandise resales
 Installation receipts (redefined to I-O 11)
Equals: SIC-based industry output
Plus: Installation receipts of wholesalers (redefined from I-O 69A)
Less: Margin on merchandise resales (redefined to I-O 69A)

Equals: I-O industry output

Commodity shipments
Plus: Miscellaneous receipts
 Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemploy-
 ers
 Services provided to foreign affiliates
 Installation receipts of wholesalers (from I-O 69A)
Less: Cost of merchandise resales
 Installation receipts (included in I-O 11)
 Margin on merchandise resales (included in I-O 69A)
 Sales of scrap and refuse (included in I-O 81)
Equals: Commodity output

53. Electrical industrial equipment and apparatus

Industry shipments, including miscellaneous receipts
Plus: Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including
 nonemployers
 Federally-funded research and development at auxiliaries
 Services provided to foreign affiliates
Less: Cost of merchandise resales
Equals: SIC-based industry output
Less: Margin on merchandise resales (redefined to I-O 69A)
Equals: I-O industry output

Commodity shipments
Plus: Miscellaneous receipts
 Change in inventories of work-in-process and finished goods
 Estimate of undercoverage of source data, including nonemploy-
 ers
 Federally-funded research and development at auxiliaries
 Services provided to foreign affiliates
Less: Cost of merchandise resales
 Margin on merchandise resales (included in I-O 69A)
Equals: Commodity output

54. Household appliances

I-O 65A-68C Transportation, Communications, and Utilities

The industry measure of transportation, communications, and utilities output is based on revenues of establishments with and without payroll, plus estimates for tips received by employees and for economic activities not covered by the census of transportation, communications, and utilities. Government subsidies are not included.

For railroads and related services, passenger ground transportation (I-O 65A), industry and commodity output include Amtrak revenues, which are not separately identified in the table but which are added to the census data. Commodity output also includes the Long Island Railroad and Alaska Railroad and publicly owned local transit systems, which are moved from State and local government enterprises (I-O 79).

For motor freight transportation and warehousing (I-O 65B), the I-O-based measure of industry output and the measure of commodity output include delivery and storage revenues, which are moved from retail trade (I-O 69B). Commodity output also includes express and freight revenues of bus companies, which are moved from the commodity railroads and related services, passenger ground transportation (I-O 65A), but it excludes revenues for trash and garbage hauling, which are moved to the commodity water and sanitary services (I-O 68C). Output does not include transportation services produced by businesses for their own use.⁶

For water transportation (I-O 65C), the I-O-based measure of industry output and the measure of commodity output include docking at boat dealers, which is moved from retail trade (I-O 69B), but exclude boat repairs and the margin on merchandise sales at marinas, which are moved to other transportation equipment (I-O 61) and retail trade (I-O 69B), respectively. Commodity output also includes the revenues of the Alaska Ferry, which are moved from State and local government enterprises (I-O 79).

For air transportation (I-O 65D), industry and commodity output include excise taxes on freight and passenger transportation and air travel facilities. Commodity output also includes landing and other fees collected by State and local government airports, which are moved from State and local government enterprises (I-O 79).

For pipelines, freight forwarders, and related services (I-O 65E), industry and commodity output include

the pipeline transportation of petroleum and other commodities, excluding natural gas. For freight forwarders, industry output includes revenues for transportation services; commodity output excludes the transportation services, which are moved to the various transportation service commodities.

For communications, except radio and TV (I-O 66), industry and commodity output include Federal and State and local government excise taxes on telephone and telegraph services, installation revenues, and the imputed value of installations performed by an establishment's own workers. The I-O-based measure of industry output and the measure of commodity output exclude revenues from directory advertising, which are moved to advertising (I-O 73D). Commodity output also excludes cable and pay TV advertising revenues, which are also moved to advertising (I-O 73D).

For radio and TV broadcasting (I-O 67), SIC-based and I-O-based industry output include advertising revenues. Commodity output excludes advertising revenues, which are moved to advertising (I-O 73D).

For electric services (utilities) (I-O 68A), industry and commodity output exclude electricity that is resold and rate refunds.⁷ Commodity output also includes electricity generated by Federal Government enterprises (I-O 78) and State and local government enterprises (I-O 79).

For gas production and distribution (utilities) (I-O 68B), industry and commodity output include gas sold to final users, gas sold for resale, and natural gas pipeline transportation costs; industry output includes only private establishments. Commodity output also includes sales of gas by State and local government utilities (I-O 79). Output does not include natural gas used as a raw material.

For water and sanitary services (I-O 68C), industry output includes only private establishments. Commodity output excludes private sewerage systems, which are moved to State and local government enterprises (I-O 79). Commodity output includes the revenues of State and local government water utilities, which are moved from State and local government enterprises (I-O 79), and the value of trash hauled by trucking firms, which is moved from motor freight transportation and warehousing (I-O 65B).

6. See Bingsong Fang, Xiaoli Han, Ann M. Lawson, and Sherlene K.S. Lum, "U.S. Transportation Satellite Accounts for 1992," *SURVEY* 78 (April 1998): 16-27. The study introduces a new industry, "own-account transportation." The output of this new industry is identified as the aggregation of transportation services provided by all industries for their own use.

7. For electricity, the 1992 Census of Transportation, Communications, and Utilities did not contain information on purchases of electricity for resale, so other sources were used. The data used include revenues from both imported and domestically produced electricity, so imports were removed to measure domestic output.

- * Imputation

I-O 69A-69B Wholesale and Retail Trade

The industry measure of wholesale and retail trade output is based on the sum of margins on goods bought and resold and nonmargin output.⁸ For wholesale trade, margin is measured as receipts less the cost of merchandise resales plus taxes collected or, when receipts data are not available, as operating expenses plus taxes collected. Nonmargin output is measured as commissions on goods sold or as operating expenses for manufacturers' sales offices. It also includes all customs duties on imports.

For wholesale trade, margin output is included in the purchasers' prices of the goods but not in the producers'

8. The definitions and different treatments of trade output are discussed in detail in "Definitions and conventions for valuation of transactions" on page M-15.

prices of those goods. It is distributed to commodities and their purchasers using census information on the goods sold through wholesale establishments.

In contrast, nonmargin output is assumed to be purchased by producers of the goods being sold (for example, commissions paid to agents and brokers by the manufacturers of products). Therefore, it is included in the producers' prices of the goods sold and is not purchased separately by the purchaser of the good.

Output excludes government liquor stores, which are included in State and local government enterprises (I-O 79), and service contracts of wholesalers, which are assumed to be included in revenues of the related manufacturing or service industry.

The SIC-based and I-O wholesale measures of industry output are significantly different. These differences generally involve margin output from resale activities by

Equals: I-O industry output

I-O industry output

Equals: Commodity output

SIC-based mining, manufacturing, and service industries that are moved to the I-O wholesale trade industry, as well as manufacturing and service activities by SIC-based wholesale trade that are moved to the I-O manufacturing and service industries.

For retail trade, margin output is measured as receipts less the cost of merchandise resales plus taxes collected. Nonmargin output, which is relatively small, is generally based on revenues from mailing and handling charges. Output excludes revenues from service contracts because they are assumed to be included in the revenues of the related manufacturing or service industry. The commodity output for retail trade includes margin output from

Federal Government enterprise establishments (for example, margin output generated by post exchanges, which is moved to retail from other Federal Government enterprises, I-O 78), and margin output from State and local government enterprise establishments (for example, margin output generated by State-owned liquor stores, which is moved to retail from other State and local government enterprises, I-O 79).

Retail margin is distributed to commodities by type of purchaser, using census information on the goods sold through retail establishments. Retail margin is largely distributed to household consumers, although some is distributed to businesses. For example, some businesses buy

***Equals:* Commodity output**

computers through retail establishments, and many lumber yards are considered retail establishments although they sell to construction firms.

The SIC-based and I-O retail measures of industry output are also significantly different, because there are many activities that are moved from the SIC-based retail trade industry to the I-O industries where the activities are primary. Generally, these movements involve services provided by SIC-based retail trade establishments that are moved to the I-O service industries where the activities are primary and retail activities in SIC-based service industries that are included in the I-O retail industry.

Eating and drinking places, which are classified as part of retail trade in the SIC system, are included in services for both the SIC-based and the I-O measures of industry and commodity output.

I-O 70A-71B Finance, Insurance, and Real Estate

The industry measure of finance, insurance, and real estate output is based on several different types of data and estimating methods. Some estimates are activity-based, and others are establishment-based. For finance (I-O 70A), output is generally based on monetary income (excluding capital gains and interest income), plus imputations for service charges of financial intermediaries, except life insurance carriers and private noninsured pension plans.⁹ For insurance (I-O 70B), output of life insurance is generally based on operating expenses, and that of other insurance is generally based on premiums collected less claims paid. For owner-occupied dwellings (I-O 71A), output is based on an imputation for services of owner-occupied housing. For real estate and royalties (I-O 71B), output is based on revenues of commercial establishments but also includes rental activity in all other industries as well as an imputation for the rental value of buildings and equipment owned and used by nonprofit

institutions serving individuals. Output does not include activities of land subdividers and developers, which are included in the construction industry (I-O 11).

For finance, output includes monetary income but excludes capital gains and interest income. Output also includes imputations for service charges of financial intermediaries and for services furnished without payment by domestic securities dealers, plus an estimate of undercoverage of auto leasing revenues in the economic census data. Output for security and commodity brokers was estimated largely using Securities and Exchange Commission data.

Insurance includes both life insurance and all other insurance. For life insurance (including private pension funds), output is based on operating expenses; the fraternal benefit societies and mutual savings banks component is based on premiums collected less claims paid. For all other insurance, output is generally based on premiums collected less claims paid. Commodity output also includes Federal crop and flood insurance and Overseas Private Investment Corporation insurance, which are moved from Federal Government enterprises (I-O 78), and miscellaneous insurance trusts, which are moved from State and local government enterprises (I-O 79).

For owner-occupied dwellings, output is based on an imputed value of the space rent that homeowners would receive if they rented their homes. The imputed space rent does not cover major appliances, furniture, furnishings, and utilities for the home. Owner-occupied dwellings are thus treated as businesses that purchase housing and sell housing services to persons, similar to tenant-occupied dwellings. Dwellings include owner-occupied mobile homes, owner-occupied farm and nonfarm dwellings, and farm dwellings provided to hired laborers.

For real estate, industry output is measured on an activity basis rather than an establishment basis. The output measure is based on revenue data and then augmented to include all rental activity of other industries. Output includes rents, commissions, property management fees, and title abstract and escrow fees. Commodity output also includes rental activity by government enterprises.

For dwellings and equipment owned and used by nonprofit institutions serving individuals, output is defined as an imputed rental charge. It is measured as net interest (mortgage interest), property taxes, and capital consumption allowances.

For royalties, the measures of industry and commodity output are based on receipts for individuals, partnerships, corporations, and governments, adjusted for misreporting. Output includes royalty payments received by nonprofits serving individuals and depletion claimed

9. For intermediaries, output consists of priced services (check collection, wire, transfer, clearing houses, etc.) and reimbursements from the U.S. Treasury for services provided by Federal Reserve banks and imputed service charges. These imputed charges represent charges that the intermediaries do not collect explicitly. An example of this would be checking accounts, for which no regular fee is charged. A bank is considered to receive an imputed charge from the depositor for services for which he does not pay an explicit charge. Imputed service charges are generally measured as monetary interest received less monetary interest paid. These charges are included in the output of the intermediaries and as purchases by depositor—intermediate expenses of businesses or final purchases by persons, governments, or foreigners. In addition, the intermediary pays an imputed interest to the depositors. For more information on imputations, see U.S. Department of Commerce, Bureau of Economic Analysis, *Personal Consumption Expenditures*, Methodology Paper Series MP-6 (Washington, DC: U.S. Government Printing Office, June 1990): 8-12.

***Equals:* Commodity output**

* Imputation

by tax-exempt farmers' co-ops; it excludes oil bonus payments for oil rights.

I-O 72A-77B Services

The industry measure of services output is generally based on receipts of establishments with and without payroll, plus estimates for tips received by employees and for taxes collected. For nonprofit establishments serving individuals, output is based on expenses. Output also includes estimates for payments in-kind, for misreporting, and for other economic activities not covered by the census of service industries. It excludes the cost of merchandise resales.

For some services, the I-O-based and SIC-based measures of output are significantly different. The most important of these is for receipts for purchased meals and beverages at hotels, which are included in the SIC-based measure of hotels and lodging places (I-O 72A) but which are moved to the eating and drinking places industry (I-O

74) in the I-O-based measures. Other differences include the movement of margin on merchandise resales from all service industries to retail trade (I-O 69B) and the movement of service activities from wholesale and retail trade (I-O's 69A and 69B) to services; the most important of these is auto repair services (including parts and labor) at new car dealers, which are moved from retail trade (I-O 69B) to automotive repair and services (I-O 75).

For advertising (I-O 73D), industry output is generally based on receipts of advertising agencies, but the I-O-based measure also includes revenues from telephone directory advertising and receipts from advertising of professional sports clubs, racing, and amusement parks. In addition, commodity output includes several advertising products that are moved to this commodity, including advertising revenues of periodicals and newspapers; other advertising products, such as maps, catalogs, and signs; radio and TV broadcasting advertising revenues; cable and pay TV advertising revenues; advertising products produced by commercial artists; sign painting; direct mail advertising; advertising receipts of

movie theaters; and advertising receipts of business associations and professional membership organizations. Commodity output excludes public relations services of advertising agencies.

I-O 78-79 Government Enterprises

Federal Government enterprises and State and local government enterprises are designated as "special" industries in the I-O accounts. Federal Government enterprises include the U.S. Postal Service, the Tennessee Valley Authority and other Federal electric utilities, and military post exchanges and restaurants. State and local government enterprises include local transit systems, gas and electric utilities, water and sanitary services, and municipal parking facilities.¹⁰

The industry measure of government enterprise output is generally based on revenues. Revenues are adjusted for the cost of merchandise resales or insurance claims paid, depending upon the type of activity involved. Output

excludes operating subsidies. The SIC-based and I-O-based industry output measures are the same.

The commodity measure of government enterprise output is generally based on industry output, adjusted for such components as rental receipts from subletting of space, which is moved to the commodity real estate and royalties (I-O 71B). In cases where the commodity produced by government enterprises is the same as that produced by a private sector industry, commodity output is moved to the private sector commodity. However, in the case of sewerage systems, the commodity output from the private sector water and sanitary services (I-O 68C) is moved to the government enterprise commodity, because State and local government enterprises produce most of the output.

Some government enterprise commodities have no commodity output because the production of these commodities is considered to be primary to other industries and is therefore moved to the commodity groups of these industries; see the section "Definitions and conventions for classification," beginning on page M-14, for more details. Within Federal Government enterprises (I-O 78), the commodity output of Federal electric utilities is moved to electric services (utilities) (I-O 68A). Within State and local government enterprises (I-O 79), the com-

10. Establishments defined as government enterprises follow the same classification used in the NIPA's. For more information, see U.S. Department of Commerce, Bureau of Economic Analysis, *Government Transactions*, Methodology Paper Series MP-5 (Washington, DC: U.S. Government Printing Office, November 1988): 6.

 Rental receipts and concession income (included in I-O 71B)
 Municipal parking facility revenues (included in I-O 75)
 Off-track betting revenues (included in I-O 76)

Equals: Commodity output

modity output of State and local government passenger transit is moved to railroads and related services, passenger ground transportation (I-O 65A); and the output of State and local government electric utilities is moved to electric services (utilities) (I-O 68A).

The commodity output for Federal Government enterprises consists of Postal Service revenues and Federal Housing Administration mortgage and loan insurance, excluding rental receipts. The commodity output for State and local government enterprises consists of highway toll revenues, State and local and private sewerage revenues, and State and local lottery revenues.

I-O 80–85 Special Industries, Excluding Government Enterprises

This group consists of six specially designated "industries," which are not based on the SIC system: Noncomparable imports (I-O 80); scrap, used and secondhand goods (I-O 81); general government industry

(I-O 82); rest of the world adjustment to final uses (I-O 83); household industry (I-O 84); and inventory valuation adjustment (I-O 85).

For noncomparable imports and rest of the world adjustment to final uses, there are no domestic measures of industry and commodity output, because the production of these commodities is outside of the United States. Noncomparable imports are treated as commodities in the I-O accounts.¹¹

For used and secondhand goods, there is no domestic measure of industry and commodity output, because secondhand goods by definition are not produced in the current period. For scrap, there is no industry output, but commodity output is produced by other industries as a part of the production of their output. Used and secondhand goods are treated as commodities bought and sold by other industries and final users. These sales and purchases, in producers' prices, offset each other unless

11. For more information on noncomparable imports, see the section "Definitions and conventions for valuation of transactions," beginning on page M-15.

there is a change in inventories. In purchasers' prices, commodity output is the margin on the sale of the used and secondhand goods. It does not include the production of the goods.

The industry measure of general government output is based on employee compensation plus consumption of fixed capital. Employee compensation is adjusted to exclude that of both force-account construction employees and government enterprise employees.¹² Commodity and industry output are the same.

12. In contrast with the I-O accounts, the output of general government in the NIPA's includes compensation of force-account construction workers.

The industry measure of household output is based on employee compensation. Household employees include maids, chauffeurs, and babysitters, among others. Commodity and industry output are the same.

The industry measure of inventory valuation adjustment output is from the NIPA's. It is used to eliminate inventory profits or loss from the change in inventory. Commodity and industry output are the same.

80. Noncomparable imports

No domestic output

No domestic output

81. Scrap, used and secondhand goods

No domestic output

Scrap produced in other industries
Equals: Commodity output

82. General government industry

Compensation of general government employees
Plus: Consumption of fixed capital
Less: Force-account compensation of general government
Equals: SIC-based industry output
Equals: I-O industry output

I-O industry output

Equals: Commodity output

83. Rest of the world adjustment to final uses

No domestic output

No domestic output

84. Household industry

Compensation of household workers
Equals: SIC-based industry output
Equals: I-O industry output

I-O industry output

Equals: Commodity output

85. Inventory valuation adjustment

NIPA estimate
Equals: SIC-based industry output
Equals: I-O industry output

I-O industry output

Equals: Commodity output

Appendix D

Products Included in Personal Consumption Expenditure Categories

This appendix identifies the products from the input-output (I-O) commodities making up each personal consumption expenditure (PCE) category in the national income and product accounts (NIPA's). It expands information provided in supplementary table D on page M-18 of this volume.

In what follows, each PCE category is first identified by its line number and descriptor in NIPA table 2.4, "Personal Consumption Expenditures by Type of Expenditure."¹ Information on the composition of the PCE category is contained in three columns. The first column provides the number and the second column the description of each I-O commodity included in the given PCE

category.² The third column provides a list of products from the identified I-O commodity that are included in the PCE category.

For example, the first PCE category shown in the table below is "3. Food purchased for off-premise consumption," indicating that this PCE category corresponds to line 3, food purchased for off-premise consumption, in NIPA table 2.4. The first two columns identify eight I-O commodities, including "livestock and livestock products" (I-O 1), "other agricultural products" (I-O 2), and six others, as making up this NIPA category. The third column identifies eggs as the single *product* from the *I-O commodity* "livestock and livestock products" in the *NIPA PCE category* "food purchased for off-premise consumption."

1. Table 2.4, "Personal Consumption Expenditures by Type of Expenditure," was most recently revised and updated in the August 1998 SURVEY.

2. Transportation costs and trade margins are not included in the list of products in this appendix. Information in supplementary table D identifies the various margins and transportation costs for each NIPA PCE category.

I-O code	Description	Products
3. Food purchased for off-premise consumption		
1	Livestock and livestock products	Eggs
2	Other agricultural products	Citrus, berries, and other fruits Corn Food crops grown under cover, including mushrooms Oats, sorghum, and hay Peanuts Potatoes and other miscellaneous field crops Tree nuts, including macadamia and pistachio Vegetables and melons
3	Forestry and forestry products ...	Fresh fish Game
9+10	Nonmetallic minerals mining	Salt
14	Food and kindred products	Animal feeds Baking powder and yeast products Beef, veal, pork, and lamb Bottled water Bread, cake, and related products, including rolls Butter Candy and other confectionery products Canned and cured fish and other seafoods Canned fruits and vegetables

I-O code	Description	Products
		Canned iced tea Canned juices Canned specialties, including baby food, soups, beans, pasta, gravy, mincemeat, Chinese foods, and Spanish foods Catsup and other tomato sauces Cereal breakfast foods Cheese, natural and processed Chewing gum Chocolate and cocoa products Coffee Cookies, toaster pastries, and ice cream cones and cups Corn and other vegetable oils Corn sweeteners Cornmeal and other corn mill products Cottage cheese Crackers, pretzels, biscuits, and related products Dairy product substitutes, including infants' formula Desserts (ready-to-mix) Distilled and blended liquors Dog and cat food Dried and dehydrated fruits, vegetables, and soups Dry, condensed, and evaporated milk products Dry mix preparations, including dips, salad dressings, gravy, frosting, potatoes, and rice Flavoring extracts and syrups Flour and other wheat and grain mill products Flour mixes (pancake, cake, biscuit, bread, etc.) Fresh fruit juices and nectars Fresh or frozen prepared fish and other seafood Frozen bakery products Frozen fruits and vegetables Frozen juices, ades, drinks, and cocktails Frozen specialties, including frozen dinners, entrees, pies, and nationality foods Ice Ice cream mixes and related products Ice cream and frozen desserts Jams, jellies, and preserves Lard Liquid, dried, and frozen eggs Macaroni and noodle products packaged with other ingredients Macaroni, spaghetti, and noodles Malt beverages, including nonalcoholic Milk (fluid), cream, and related products Nuts and seeds Other dairy products Other food preparations, including coconut, honey, and unpopped popcorn Other frozen foods Peanut butter Perishable prepared foods, including salads and sandwiches Pickles, sauces, and salad dressings, including mayonnaise and sandwich spreads Potato chips and similar products, including popcorn Poultry and small game Processed, frozen, or cooked meats and poultry Refrigerated and frozen doughs and batters, including biscuit, cookie, and bread Rice Sausage and other prepared meats, including ham, bacon, frankfurters, and luncheon meats Shortening, cooking oils, and margarine Soft drinks, carbonated and noncarbonated Soy flour and grits Spices Starch and dextrin Sugar Sweetening syrups and molasses Tea Vinegar and cider Wines, brandy, and brandy spirits Yogurt
27A	Industrial and other chemicals ...	Artificial sweeteners Gelatin, except ready-to-eat dessert Salt
69B	Retail trade	Fruit baskets
81	Scrap, used and secondhand goods.	Sales of scrap cans

4. Purchased meals and beverages

65A	Railroads and related services; passenger ground transportation.	Railroad dining car receipts
65D	Air transportation	Alcoholic beverage receipts of airlines

I-O code	Description	Products
74	Eating and drinking places	Meal and beverage service Tips for meal and beverage service
76	Amusements	Food and beverage service of amusement parks, carnivals, circuses, and fairs Food and beverage service of auto, horse, and dog tracks Food and beverage service of dance studios, schools, and halls Food and beverage service of professional or semi-professional sports clubs Food and beverage service of theaters, including dance and music Motion picture theater food and beverage service
77B	Educational and social services, and membership organizations.	Food and beverage service of museums, art galleries, arboreta, and botanical or zoological gardens

5. Food furnished to employees (including military)

1	Livestock and livestock products	Eggs
2	Other agricultural products	Citrus, berries, and other fruits Potatoes Vegetables and melons
3	Forestry and fishery products	Fresh fish
14	Food and kindred products	Beef, veal, pork, and lamb Bottled water Bread, cake, and related products, including rolls Butter Candy and other confectionery products Canned and cured fish and seafood Canned fruits and vegetables Canned juices Canned specialties, including soups, beans, pasta, gravy, mincemeat, Chinese foods, and Spanish foods Catsup and other tomato sauces Cereal breakfast foods Cheese, natural and processed Chocolate and cocoa products Coffee Cookies, toaster pastries, and ice cream cones and cups Corn and other vegetable oils Corn sweeteners Cornmeal and other corn mill products Crackers, pretzels, biscuits, and related products Dairy product substitutes Desserts (ready-to-mix) Dried and dehydrated fruits, vegetables, and soups Dry, condensed, and evaporated milk products Dry mix preparations, including dips, salad dressings, gravy, frosting, potatoes, and rice Flavoring extracts and syrups Flour and other wheat and grain mill products Flour mixes (pancake, cake, biscuit, bread, etc.) Fresh fruit juices and nectars Fresh or frozen prepared fish and other seafood Frozen bakery products Frozen fruits and vegetables Frozen juices, ades, drinks, and cocktails Frozen specialties, including frozen dinners, entrees, pies, and nationality foods Ice cream and frozen desserts Jams, jellies, and preserves Macaroni and noodle products packaged with other ingredients Macaroni, spaghetti, and noodles Milk (fluid), cream, and related products Nuts and seeds Other dairy products Other food preparations, including coconut, honey, and unpopped popcorn Other frozen foods Peanut butter Perishable prepared foods, including salads and sandwiches Pickles, sauces, and salad dressings, including mayonnaise and sandwich spreads Potato chips and similar products, including popcorn Poultry and small game Processed, frozen, or cooked meat and poultry Refrigerated and frozen dough and batters, including biscuit, cookie, and bread Rice Sausage and other prepared meats, including ham, bacon, frankfurters, and luncheon meats Shortening, cooking oils, and margarine Soft drinks, carbonated and noncarbonated Spices Sugar Tea

I-O code	Description	Products
6. Food produced and consumed on farms		
1	Livestock and livestock products	Eggs Milk
2	Other agricultural products	Citrus, berries, and other fruits Potatoes Tree nuts, except macadamia and pistachios Vegetables and melons
14	Food and kindred products	Beef, veal, lamb, and pork Poultry
7. Tobacco products		
15	Tobacco products	Chewing and smoking tobacco, including snuff Cigarettes, including nontobacco cigarettes Cigars
12. Shoes and other footwear		
32	Rubber and miscellaneous plastics products.	Rubber and plastics footwear
33+34	Footwear, leather, and leather products.	Children's footwear, including athletic shoes House slippers Men's footwear, including athletic shoes Women's footwear, including athletic shoes
81	Scrap, used and secondhand goods.	Used footwear
14. Women's and children's clothing and accessories, except shoes		
16	Broad and narrow fabrics, yarn and thread mills.	Fabric Ribbons, tape, and webbing Thread Yarn
18	Apparel	Academic caps and gowns, and costumes Baby pants and diaper covers, plastic and rubberized Bras, girdles, and allied products Coats, jackets, and snowsuits Custom made garments Dresses Fur garments Garters, hose supporters, arm bands, and suspenders Gloves and mittens Handkerchiefs Hats, caps, and millinery Hosiery, including socks Lace goods Leather and other belts Leather and sheep-lined clothing Other apparel Other outerwear, including uniforms, jeans, slacks, bathing suits, sweaters, and jogging suits Robes and dressing gowns Raincoats Shirts and blouses Suits, skirts, and coats Underwear and nightwear Waterproof outer garments
19	Miscellaneous fabricated textile products.	Ribbons
24	Paper and allied products, except containers.	Disposable diapers, except adult, including disposable training pants
26B	Other printing and publishing	Patterns for clothing
32	Rubber and miscellaneous plastics products.	Rubber clothing, including wet suits, rainwear, and bathing caps
33+34	Footwear, leather, and leather products.	Billfolds, wallets, and other personal leather goods Handbags and purses Leather gloves and mittens Suitcases, briefcases, and bags Trunks and hand trunks
64	Miscellaneous manufacturing	Buckles for wearing apparel Buttons Other fasteners and apparel trimming Pins, including hatpins Sewing needles

I-O code	Description	Products
69B	Retail trade	Umbrellas, parasols, and canes Zippers and slide fasteners Handling charges of catalog and mail-order houses
72B	Personal and repair services (except auto).	Alterations
81	Scrap, used and secondhand goods.	Used clothing

15. Men's and boys' clothing and accessories, except shoes

16	Broad and narrow fabrics, yarn and thread mills.	Fabric Thread Yarn
18	Apparel	Academic caps and gowns, and costumes Custom made garments Fur garments Gloves and mittens Handkerchiefs Hats and caps Hosiery, including socks Leather and other belts Leather and sheep-lined clothing Neckwear, including ties, mufflers, and scarves Other outerwear, including swimwear, shorts, sweaters, and jackets Raincoats Robes and dressing gowns, including smoking jackets Shirts Suits and coats Suspenders Trousers and slacks, including jeans Underwear and nightwear Waterproof outer garments Work clothing
32	Rubber and miscellaneous plastics products.	Rubber clothing, including wet suits and rainwear
33+34	Footwear, leather, and leather products.	Billfolds, wallets, and other personal leather goods Leather gloves and mittens Suitcases, briefcases, and bags Trunks and hand trunks
64	Miscellaneous manufacturing	Buckles for wearing apparel Buttons Other fasteners and apparel trimming Sewing needles Umbrellas and canes Zippers and slide fasteners
69B	Retail trade	Handling charges of catalog and mail-order houses
72B	Personal and repair services (except auto).	Alterations
81	Scrap, used and secondhand goods.	Used clothing

16. Standard clothing issued to military personnel

18	Apparel	Dresses Gloves and mittens Handkerchiefs Hats and caps Hosiery, including socks Leather and other belts Neckwear, including ties and scarves Other outerwear Raincoats Trousers and slacks Underwear and nightwear Shirts and blouses Suits, skirts, and coats Work clothing
19	Miscellaneous fabricated textile products.	Textile bags Towels and washcloths
33+34	Footwear, leather, and leather products.	Handbags and purses Men's footwear, except athletic Women's footwear, except athletic

I-O code	Description	Products
17. Cleaning, storage, and repair of clothing and shoes		
72A	Hotels and lodging places	Laundry services of hotels and lodging places
72B	Personal and repair services (except auto).	Alterations and garment repairs Cleaning, repairing, and storage of fur garments Coin-operated laundry and dry cleaning Diaper services Dry cleaning work Family laundry work Hat cleaning Linen supply service Other laundry, cleaning, and garment services Shoe repair and shoe shines
18. Jewelry and watches		
62	Scientific and controlling instruments.	Watches
64	Miscellaneous manufacturing	Costume jewelry and costume novelties, except precious metal Gold chains Jewelry, precious metal Lapidary work and diamond cutting and polishing
81	Scrap, used and secondhand goods.	Sales of precious metal scrap Used jewelry
19. Other miscellaneous personal, clothing and jewelry services		
72B	Personal and repair services (except auto).	Clothing and costume rental services Diet and weight reducing programs Other miscellaneous personal services Tanning salons and massage parlors Watch, clock, and jewelry repair
73C	Other professional and business services, except medical.	Miscellaneous repair services
21. Toilet articles and preparations		
19	Miscellaneous fabricated textile products.	Powder puffs and mitts
29B	Cleaning and toilet preparations	Creams, lotions, and oils (including suntan) Hair preparations, including shampoos Liquid and bar soap Other cosmetics and toilet preparations, including deodorants Perfumes, toilet waters, and colognes Shaving preparations Toothpastes, mouthwashes, gargles, rinses, and other oral hygiene products
32	Rubber and miscellaneous plastics products.	Rubber hair curlers and hairpins
42	Other fabricated metal products	Manicure and pedicure scissors and implements Razor blades and razors, except electric
54	Household appliances	Curling irons and hair dryers Electric razors
58	Miscellaneous electrical machinery and supplies.	Storage batteries
64	Miscellaneous manufacturing	Hair pieces, toupees, and wigs Hair curlers and hairpins Personal brushes, including toothbrushes and hairbrushes Tobacco pipes, cigar and cigarette lighters
22. Barbershops, beauty parlors, and health clubs		
72A	Hotels and lodging places	Beauty and barber shop services of hotels and lodging places, including tips Physical fitness centers of hotels and lodging places
72B	Personal and repair services (except auto).	Beauty and barber shop services, including tips
76	Amusements	Physical fitness centers
24. Owner-occupied nonfarm dwellings—space rent		
71A	Owner-occupied dwellings	Space rent, owner-occupied nonfarm dwellings

I-O code	Description	Products
25. Tenant-occupied nonfarm dwellings—rent		
71B	Real estate and royalties	Residential hotel and guestroom receipts Tenant-occupied nonfarm rent
26. Rental value of farm dwellings		
71A	Owner-occupied dwellings	Space rent, owner-occupied farm dwellings
71B	Real estate and royalties	Rents paid to operator landlords for farm dwellings
27. Other housing		
72A	Hotels and lodging places	College housing Elementary and secondary school housing Employee lodging Membership-basis organization hotels and lodging house rentals Room rentals (hotels and motels) Rooming and boarding house rentals
29. Furniture, including mattresses and bedsprings		
22+23	Furniture and fixtures	Bedroom furniture, including cots and bedframes Dining room and kitchen furniture Dual-purpose sleep furniture Hospital beds Infants' and children's furniture Infants' high chairs and car seats Living room, library, family room, and den furniture Mattresses, including crib, and bedsprings Other household furniture Porch, lawn, and other outdoor furniture Reed and rattan furniture (including willow, wicker, and cane) Sewing machine cabinets Sleep system ensembles, excluding water beds Unpainted and ready-to-assemble furniture Upholstered household furniture Wood office furniture
81	Scrap, used and secondhand goods.	Used furniture, including antiques
30. Kitchen and other household appliances		
38	Primary nonferrous metals manufacturing.	Extension and power supply cords
40	Heating, plumbing, and fabricated structural metal products.	Domestic heating stoves, except electric Other heating equipment, except electric
52	Service industry machinery	Evaporative air coolers Room air conditioners and dehumidifiers
54	Household appliances	Ceiling fans Dishwashing machines Electric, gas, and other ranges, ovens, and cooking equipment, including microwaves Electric irons Floor waxing, polishing, scrubbing machines, and shampooing machines Food waste disposers and trash compactors Other small electromechanical and electrothermal appliances Other household appliances Parts and attachments for household appliances Portable air purifiers, dehumidifiers, and humidifiers Portable air space heaters Range hoods, oven hoods, and other ventilating and exhaust fans Refrigerators and freezers, including combinations Sewing machines and parts Small electric household cooking appliances Vacuum cleaners, including attachments and cleaning tools Washing machines and dryers, including combinations Water heaters Window, desk, and wall bracket fans
58	Miscellaneous electrical machinery and supplies.	Electrical insect killers Other electrical products
81	Scrap, used and secondhand goods.	Used appliances

I-O code	Description	Products
31. China, glassware, tableware, and utensils		
20+21	Lumber and wood products	Miscellaneous wooden products Wood household items (tableware and kitchenware)
32	Rubber and miscellaneous plastics products.	Other fabricated plastics products Plastics dinnerware, tableware, kitchenware, and ovenware Plastics foam products (including cups and plates)
35	Glass and glass products	Glass containers Lamp globes, shades, chimneys, bowls, and parts Table, kitchen, and novelty glassware
36	Stone and clay products	Earthenware table and kitchenware Red unglazed earthenware Stoneware table and kitchen articles Vitreous china table and kitchenware
38	Primary nonferrous metals manufacturing.	Aluminum cooking utensils
41	Screw machine products and stampings.	Aluminum household utensils, bakeware, and camping cookware Metal home canning closures and crowns Stainless steel household utensils and bakeware Tinware and other stamped and spun cooking and kitchen utensils
42	Other fabricated metal products	Kitchen tools, including can openers, peelers, slicers, and dicers Other fabricated metal products Pails, ash cans, garbage cans, and tubs Table and kitchen cutlery Vacuum and insulated bottles, jugs, and chests Wire baskets, wire shelving, wire racks, and other wire products
64	Miscellaneous manufacturing	Silverware and plated ware
69B	Retail trade	Handling charges at gift, novelty, and souvenir shops
81	Scrap, used and secondhand goods.	Used kitchenware, including antiques and collectibles
32. Other durable house furnishings		
17	Miscellaneous textile goods and floor coverings.	Carpets, rugs, and artificial grass Felt carpet and rug padding Jute goods used as carpeting or padding
19	Miscellaneous fabricated textile products.	Awnings Carpet tiles Non-camping tents
20+21	Lumber and wood products	Cork and cork products Jewelry boxes and silver chests Mirror and picture frames Stepladders and rung ladders Wood household items (bookends, ornaments, and ashtrays)
22+23	Furniture and fixtures	Curtain and drapery rods, poles, and fixtures Venetian blinds Window shades, blinds, and accessories
26B	Other printing and publishing	Art reproductions and picture prints
32	Rubber and miscellaneous plastics products.	Foam rubber and sponge carpet and rug cushions Individual rubber mats, including stair treads Plastics foam carpet and rug cushions
33+34	Footwear, leather, and leather products.	Leather goods, including desk sets and leather novelties
35	Glass and glass products	Mirrors
36	Stone and clay products	Art, decorative, and novelty pottery Statuary and art goods
40	Heating, plumbing, and fabricated structural metal products.	Small utility buildings (toolsheds)
42	Other fabricated metal products	Axes, hatchets, chisels, professional and craft edge hand tools Builders' hardware Fireplace fixtures and equipment Handsaws and saw blades Hedge and grass shears and pruners Household scissors and shears Ironing boards Machine tools for woodcutting Mechanics' hand service tools, including pliers, wrenches, and screwdrivers Metal ladders Other hand tools, including shovels, hammers, picks, and hoes

I-O code	Description	Products
44+45	Farm, construction, and mining machinery.	Power saw blades Wire carts Consumer lawn, garden, and snow equipment
47	Metalworking machinery and equipment.	Gas welding and cutting equipment, including parts, attachments, and accessories Machine tools designed primarily for home workshops Power driven hand tools, including parts, attachments, and accessories
48	Special industry machinery and equipment.	Woodworking machinery for home workshops, including parts, attachments, and accessories
50	Miscellaneous machinery, except electrical.	Household and person weighing scales
51	Computer and office equipment	Automatic typing and word processing machines, parts, and attachments Calculators and adding machines Typewriters
53	Electrical industrial equipment and apparatus.	Fractional horsepower motors, including parts and supplies
55	Electric lighting and wiring equipment.	Incandescent hand portable lighting equipment Lamps and lanterns, nonelectric Portable residential lighting fixtures, including parts and accessories
56	Audio, video, and communication equipment.	Answering machines Telephone sets
61	Other transportation equipment	Wheelbarrows
62	Scientific and controlling instruments.	Clocks Household thermometers and barometers Household timing mechanisms
64	Miscellaneous manufacturing	Hair clippers (human use) Other miscellaneous products Paint and varnish brushes Pens and mechanical pencils
69B	Retail trade	Handling charges for catalog and mail-order houses Handling charges for miscellaneous home furnishings stores
81	Scrap, used and secondhand goods.	Antiques, collectibles, and used durable house furnishings Used floor coverings Used lawn and garden equipment Used tools and hardware Used typewriters

33. Semidurable house furnishings

16	Broad and narrow fabrics, yarn and thread mills.	Fabric Thread Yarn
17	Miscellaneous textile goods and floor coverings.	Blankets Cordage and twine Nonwoven fabrics
19	Miscellaneous fabricated textile products.	Apparel trimmings Bedspreads and bedsets Comforters, quilts, and other quilted products Curtains and draperies Embroideries Flags, banners, and similar emblems Laundry, wardrobe, and shoe bags Mops and dusters Other fabricated textile products Other housefurnishings, including blankets, pillows, and mattress protectors Sheets and pillowcases Shower curtains, including plastics Slip covers and fancy pillows Stamped art goods for embroidering, punching, and needlework Table linen and related articles Tarpaulins and other covers Towels and washcloths
20+21	Lumber and wood products	Bamboo, rattan, willow and chip, basketwork and wickerwork
26B	Other printing and publishing	Decals and pressure sensitives
32	Rubber and miscellaneous plastics products.	Other industrial rubber products Plastics foam products Pressure sensitive tape Rubber gloves Rubber and plastic garden hoses
35	Glass and glass products	Art and novelty glassware

I-O code	Description	Products
37	Primary iron and steel manufacturing.	Lamp globes, shades, chimneys, bowls, and parts Nails, spikes, brads, tacks, and staples
41	Screw machine products and stampings.	Bolts, nuts, rivets, and washers
54	Household appliances	Electric bed coverings
64	Miscellaneous manufacturing	Brooms Feathers, plumes, and artificial flowers Fire extinguishers Household maintenance brushes Lamp shades Needles Other miscellaneous products Zippers and slide fasteners
69B	Retail trade	Handling charges for drapery, curtain, and upholstery stores
81	Scrap, used and secondhand goods.	Used curtains and draperies Used seasonal decorations Used sewing, knitting, and needlework goods

34. Cleaning and polishing preparations, and miscellaneous household supplies and paper products

3	Forestry and fishery products	Rosin Turpentine
9+10	Nonmetallic minerals mining	Peat
17	Miscellaneous textile goods and floor coverings.	Nonwoven ribbons and wipers
24	Paper and allied products, except containers.	Coffee filters Doilies, place mats, tray covers or tray doilies Gift wrap paper Gummed products, including tape Molded pulp goods, including food trays Other miscellaneous paper and board products, including fine crepe paper Plastics, laminated, and coated bags Pressure sensitive products, including tape Sanitary tissue paper products, including facial tissues, toilet tissue, napkins, and towels Uncoated paper and multiwall bags Waxed and wax-laminated paper
25	Paperboard containers and boxes.	Other paper and paperboard items, including straws and tablecloths Paper and paperboard plates, dishes, and cups
26B	Other printing and publishing	Miscellaneous printing, including seals and tickets
27A	Industrial and other chemicals ...	Household tints and dyes Hydrogen peroxide Lighter fluids Rosin Sodium hydroxide (caustic soda) Water softening compounds
27B	Agricultural fertilizers and chemicals.	Agricultural and household pesticidal preparations Nitrogenous and phosphatic fertilizers
29B	Cleaning and toilet preparations	Air and room fresheners Ammonia Automobile polish and cleaner Bathroom, tub, and tile cleaners, toilet bowl cleaners, and drain solvents Bleach Cat litter Disinfectants Fabric softeners and rinses, laundry starch, and other laundry aids Floor polish Furniture polish and cleaners Glass window cleaning products, including automotive windshield washer fluid Household detergents, including machine dishwashing compounds Other specialized detergents and polishing preparations Oven cleaners Rug and upholstery cleaner Shoe polishes and cleaners
30	Paints and allied products	Clear finishes and stains Other allied paint products Paints and architectural coatings
32	Rubber and miscellaneous plastics products.	Plastic wrap
36	Stone and clay products	Fuller's earth Metal abrasives, including steel wool and scouring pads Nonmetallic coated abrasive products

I-O code	Description	Products
42	Other fabricated metal products	Household, institutional, and freezer foil Laminated gift wrap
53	Electrical industrial equipment and apparatus.	Fuses
55	Electric lighting and wiring equipment.	Electric lamp bulbs and tubes
58	Miscellaneous electrical machinery and supplies.	Primary cells and batteries
64	Miscellaneous manufacturing	Candles, including tapers Matches

35. Stationery and writing supplies

24	Paper and allied products, except containers.	Envelopes Stationery, tablets, and related products
26B	Other printing and publishing	Blankbooks, including albums, scrapbooks, diaries, appointment books, and address books Checkbooks Greeting cards Looseleaf binders, devices, and forms Picture postcards and souvenir cards Social engraving
27A	Industrial and other chemicals ...	Glues and adhesives
32	Rubber and miscellaneous plastics products.	Stationer's sundries, including erasers
64	Miscellaneous manufacturing	Artists' equipment and materials, including brushes Carbon paper and stencil paper Hand stamps, stencils, and other marking devices Inked ribbons Pencils, crayons, and chalk Pens and mechanical pencils
81	Scrap, used and secondhand goods.	Used greeting cards Used school supplies

37. Electricity

68A	Electric services (utilities)	Electric service (public and private)
-----	-------------------------------------	---------------------------------------

38. Gas

68B	Gas production and distribution (utilities).	Natural gas (utilities)
-----	--	-------------------------

39. Water and other sanitary services

68C	Water and sanitary services	Refuse systems, including collection and disposal Water supply (public and private)
79	State and local government enterprises.	Sewerage systems (public and private)

40. Fuel oil and coal

7	Coal mining	Bituminous, lignite, and anthracite coal
20+21	Lumber and wood products	Firewood and fuel wood containing an added binder, including compressed logs
27A	Industrial and other chemicals ...	Hardwood charcoal and charcoal briquets
31	Petroleum refining and related products.	Fireplace logs, made from coal Fuel briquettes Fuel oil (light and heavy) Kerosene Liquefied petroleum gases
68C	Water and sanitary services	Steam and air-conditioning supply

41. Telephone and telegraph

66	Communications, except radio and TV.	Radiophone services, including cellular and beeper services Telegraph and other message communications services, including facsimile transmission services Telephone services, including local and long distance
72A	Hotels and lodging places	Telephone charges at hotels and lodging places

I-O code	Description	Products
42. Domestic service		
73C	Other business and professional services, except medical.	Building cleaning and maintenance services
84	Household industry	Services of domestic workers
43. Other household operation		
65B	Motor freight transportation and warehousing.	Household goods warehousing and storage Local and long-distance trucking and moving services, including packing and storage Self-storage and miniwarehouse warehousing
65C	Water transportation	Water freight shipping
65D	Air transportation	Air freight shipping
70B	Insurance	Burglary and theft insurance Fire, allied, and multi-peril insurance Inland marine insurance Property liability insurance
72B	Personal and repair services (except auto).	Carpet and upholstery cleaning Electrical appliance repair Refrigeration and air-conditioning repair Reupholstery and furniture repair
73C	Other business and professional services, except medical.	Appliance and furniture rental and leasing, including rent-to-own Detective and protective services Disinfecting and pest control services Gas appliance repair Interior designing services Other repair and related services, including furnace and chimney cleaning Security system services Telephone answering services Water softening services
78	Federal Government enterprises	Mail revenues, including stamps and other charges
81	Scrap, used and secondhand goods.	Used stamps
45. Drug preparations and sundries		
19	Miscellaneous fabricated textile products.	Miscellaneous fabricated textile products
24	Paper and allied products, except containers.	Other sanitary paper products, including absorbent pads Sanitary napkins and tampons
27A	Industrial and other chemicals ...	Oxygen
29A	Drugs	Medicinals, botanicals, and biologicals Pharmaceuticals for human and veterinary use
31	Petroleum refining and related products.	Petrolatum (petroleum jelly)
32	Rubber and miscellaneous plastics products.	Household and surgical gloves Other rubber druggist and medical sundries, including prophylactics, diaphragms, and syringes
54	Household appliances	Electric heating pads
55	Electric lighting and wiring equipment.	Health lamp fixtures
62	Scientific and controlling instruments.	Artificial limbs Elastic braces, elastic stockings, and arch supports First aid kits Incontinent pads, bed pads, and adult diapers Other medical supplies, including splints, crutches, canes, and wheel chairs Surgical dressings, including bandages, gauze, and cotton Syringes and hypodermic needles Thermometers, including digital
46. Ophthalmic products and orthopedic appliances		
58	Miscellaneous electrical machinery and supplies.	Primary cells and batteries
62	Scientific and controlling instruments.	Artificial limbs and braces Hearing aids and repair Orthopedic and prosthetic appliances and supplies, including parts
63	Ophthalmic and photographic equipment.	Contact lenses Other ophthalmic goods Prescription eye glasses, including frames and lenses

I-O code	Description	Products
81	Scrap, used and secondhand goods.	Ready-made sun and reading glasses Used medical equipment
47. Physicians		
77A	Health services	Services of doctors of medicine, including tests and lab work billed
48. Dentists		
77A	Health services	Services of dentists
49. Other professional medical services		
65A	Railroads and related services; passenger ground transportation.	Ambulance or rescue service, except by air
73C	Other business and professional services, except medical.	Medical equipment rental and leasing
77A	Health services	Home health care services, including visiting nurses Kidney dialysis centers Other health services, including health screening services, blood banks and donor stations, sperm banks, and childbirth preparation classes Services of chiropractors Services of medical laboratories (not billed by a medical professional) Services of optometrists Services of osteopathic doctors Services of other health practitioners, including physical therapists, psychologists, speech pathologists, and nutritionists Services of podiatrists Specialty outpatient care facilities, including alcohol treatment, drug treatment, and mental health
52. Nonprofit hospitals		
77A	Health services	Services of private nonprofit hospitals, including general medical and surgical hospitals, psychiatric hospitals, and specialty hospitals
53. Proprietary hospitals		
77A	Health services	Services of private proprietary hospitals, including general medical and surgical hospitals, psychiatric hospitals, and specialty hospitals
54. Government hospitals		
77A	Health services	Services of government hospitals, including general medical and surgical hospitals, psychiatric hospitals, and specialty hospitals
55. Nursing homes		
77A	Health services	Services of skilled nursing care facilities, intermediate care facilities, and other nursing and personal care facilities
56. Health insurance		
70B	Insurance	Accident insurance Income loss insurance Health insurance Workers' compensation insurance
61. Brokerage charges and investment counseling		
70A	Finance	Imputed commissions (services provided without payment by securities dealers) Investment advisory services Securities and commodities commissions Services allied with exchange of securities, including security custodians and stock quotation services
62. Bank service charges, trust services, and safe deposit box rental		
70A	Finance	Check cashing fees Fiduciary activities of depository institutions Loan origination fees of depository institutions and personal credit institutions Loan servicing fees of commercial banks and savings institutions

I-O code	Description	Products
		Other fees and commissions of depository institutions and personal credit institutions, including safe deposit box rental and ATM fees Service charges on deposit accounts
63. Services furnished without payment by financial intermediaries except life insurance carriers and private noninsured pension plans		
70A	Finance	Services provided without payment by commercial banks, savings institutions, credit unions, and investment companies
64. Expense of handling life insurance		
70B	Insurance	Foreign and domestic life insurance companies' expenses of handling life insurance in the U.S. Mutual and fraternal life insurance expenses Private pension fund expenses
65. Legal services		
73B	Legal, engineering, accounting, and related services.	Legal services provided by taxable and tax-exempt establishments
66. Funeral and burial expenses		
36	Stone and clay products	Cut stone and stone products for tombstones and burial vaults
42	Other fabricated metal products	Fabricated metal products for burial vaults, grave markers, and other burial related fabrications
65D	Air transportation	Air freight shipping
71B	Real estate and royalties	Cemetery lots
72B	Personal and repair services (except autos).	Services of funeral parlors, morticians, undertakers, and crematories
67. Other personal business		
66	Communications, except radio and TV.	Money transfer services
70A	Finance	Travel and entertainment card fees
70B	Insurance	Surety insurance
72B	Personal and repair services (except auto).	Tax return preparation services (without accounting, auditing, or bookkeeping services)
73B	Legal, engineering, accounting, and related services.	Tax preparation services of accounting, auditing, and bookkeeping establishments
73C	Other business and professional services, except medical.	Detective and protective services Employment agency services (except theatrical agencies and motion picture casting bureaus) Photocopying and duplicating services Secretarial services
73D	Advertising	Newspaper classified advertising
77B	Educational and social services, and membership organizations.	Labor unions and similar labor organizations Professional membership organizations such as bar, dental, engineering, medical, and scientific associations
78	Federal Government enterprises	Postal money orders
80	Noncomparable imports	Expenditures of U.S. labor unions in Canada
70. New autos		
59A	Motor vehicles (passenger cars and trucks).	Passenger cars (foreign and domestic)
71. Net purchases of used autos		
81	Scrap, used and secondhand goods.	Sales of ferrous scrap Used passenger cars
72. Other motor vehicles		
59A	Motor vehicles (passenger cars and trucks).	Light trucks, vans, and sport utility vehicles
61	Other transportation equipment	Automobile and light truck trailers Motor homes, including conventional, chopped van, and van campers Other transportation equipment and parts Travel trailers and campers

I-O code	Description	Products
81	Scrap, used and secondhand goods.	Used recreational vehicles Used trucks
73. Tires, tubes, accessories, and other parts		
19	Miscellaneous fabricated textile products.	Automobile seat covers
32	Rubber and miscellaneous plastics products.	Gaskets, packing, and sealing devices Inner tubes Motor vehicle transmission belts Motorcycle, motorbike, and moped tires Passenger car and truck tires Rubber and plastics hose for motor vehicles Rubber mats, automotive
35	Glass and glass products	Automotive mirrors
42	Other fabricated metal products	Automobile coil springs and hot formed leaf springs for replacement Motor vehicle hardware including lock units, door window handles, window regulators, hinges, and license plate brackets Wire chain
50	Miscellaneous machinery, except electrical.	Carburetors, pistons, rings, and valves
52	Service industry machinery	Air conditioning systems for automobiles and trucks
55	Electric lighting and wiring equipment.	Automotive lamps Vehicular lighting equipment
56	Audio, video, and communication equipment.	Automobile radios
57	Electronic components and accessories.	Auto antennas
58	Miscellaneous electrical machinery and supplies.	Battery charging alternators, generators, and regulators Cranking motors (starters) Ignition harness and cable sets Parts for engine electrical or electronic equipment, including armatures and field coils Spark plugs Storage batteries
59B	Truck and bus bodies, trailers, and motor vehicle parts.	Filters (fuel, oil, air, hydraulic, coolant) for motor vehicles New motor vehicle parts and accessories, excluding filters Rebuilt automotive components, excluding carburetors and engine electrical equipment
81	Scrap, used and secondhand goods.	Sales of scrap other than ferrous metal Used tires Used auto parts
74. Repair, greasing, washing, parking, storage, rental and leasing		
75	Automotive repair and services	Automobile parking Automotive repair services, including body and paint shops Car rental and leasing Car washes Other automotive services, including towing and rustproofing Tire retreading and repair Truck leasing and rental Utility trailer and recreational vehicle rental
76	Amusements	Parking fees at theatrical productions and professional and semi-professional sports clubs
77B	Educational and social services, and membership organizations.	Parking fees at higher education establishments
75. Gasoline and oil		
31	Petroleum refining and related products.	Aviation gasoline, except jet fuel Light fuel oil Liquefied petroleum gases Lubricating oils and greases Motor gasoline
76. Bridge, tunnel, ferry, and road tolls		
79	State and local government enterprises.	Bridge, tunnel, ferry, and road tolls

I-O code	Description	Products
77. Motor vehicle insurance		
70B	Insurance	Auto insurance
79. Mass transit systems		
65A	Railroads and related services; passenger ground transpor- tation.	Local and suburban transit (public and private) Railroad passenger transportation School bus transportation
80. Taxicab		
65A	Railroads and related services; passenger ground transpor- tation.	Taxicab transportation and tips
82. Railway		
65A	Railroads and related services; passenger ground transpor- tation.	Rail passenger transportation and tips, including Amtrak
83. Bus		
65A	Railroads and related services; passenger ground transpor- tation.	Bus charter service, except local intercity and rural bus transportation
84. Airline		
65D	Air transportation	Domestic air transportation, including excess baggage
85. Other intercity transportation		
65A	Railroads and related services; passenger ground transpor- tation.	Rail passenger transportation, including Amtrak Limousine services Vanpool operations
65B	Motor freight transportation and warehousing.	Express commuter bus service
65C	Water transportation	Ferry transportation
65E	Pipelines, freight forwarders, and related services.	Tour operators
87. Books and maps		
26B	Other printing and publishing	Art reproductions and prints Maps and atlases Other books, including paperback, book clubs, mail-order, pamphlets, and audio books Miscellaneous publications, including almanacs, yearbooks, and travel guides Religious books Technical, scientific, and professional books, including law books and medical books Textbooks, workbooks, tests, and manuals
69B	Retail trade	Handling charges of book stores
81	Scrap, used and secondhand goods.	Used books
88. Magazines, newspapers, and sheet music		
26A	Newspapers and periodicals	Farm periodicals General and consumer periodicals Newspapers Other periodicals, including specialized business and professional periodicals
26B	Other printing and publishing	Business service publications Miscellaneous publications, including racing forms and shopping news Sheet music
81	Scrap, used and secondhand goods.	Sales of scrap paper Used magazines and newspapers
89. Nondurable toys and sport supplies		
1	Livestock and livestock products	Miscellaneous animals including worms
3	Forestry and fishery products	Christmas trees

I-O code	Description	Products
13	Ordnance and accessories	Small arms ammunition
17	Miscellaneous textile goods and floor coverings.	Fish nets and fish line
24	Paper and allied products, except containers.	Party and holiday goods and accessories
26B	Other printing and publishing	Playing cards
27A	Industrial and other chemicals ...	Fireworks and pyrotechnics, including toy pistol caps Swimming pool chemical preparations
32	Rubber and miscellaneous plastics products.	Balloons Rubber toys, including balls
53	Electrical industrial equipment and apparatus.	Fluorescent lamp ballasts and specialty transformers
55	Electric lighting and wiring equipment.	Christmas tree lamps Flash bulbs Photographic lamps, except flash
58	Miscellaneous electrical machinery and supplies.	Electric Christmas tree ornaments
63	Ophthalmic and photographic equipment.	Photo film and paper Photographic chemicals
64	Miscellaneous manufacturing	Christmas tree ornaments and decorations, excluding glass and electrical Dolls and stuffed toys Electronic games and toys Feathers, plumes, and artificial flowers Fishing tackle and equipment Nondurable golf equipment, including balls Nondurable team sports equipment, including balls Nondurable wading and above ground pools Non-electronic games Other nondurable sporting and athletic goods, including archery, tennis, and racquetball balls Skateboards Toys and hobbies
72B	Personal and repair services (except auto).	Electrical and electronic repair
81	Scrap, used and secondhand goods.	Used toys, hobby goods, and games

90. Wheel goods, sports and photographic equipment, boats, and pleasure aircraft

13	Ordnance and accessories	Small arms, including rifles, shotguns, and pistols
19	Miscellaneous fabricated textile products.	Camping tents Gym bags Parachutes Sails and other canvas products Sleeping bags
32	Rubber and miscellaneous plastics products.	Inner tubes Tires, including bicycle Rubber boats and life rafts
33+34	Footwear, leather, and leather products.	Camera and binocular cases Dog collars, leashes, and other leather household pet accessories Leather holsters Saddlery, harness, and accouterments
42	Other fabricated metal products	Marine hardware Pocket and pen knives Wire cages
43	Engines and turbines	Outboard motors
58	Miscellaneous electrical machinery and supplies.	Aircraft batteries Electrical outboard motors for boats
60	Aircraft and parts	Complete aircraft, except military
61	Other transportation equipment	All-terrain vehicles Bicycles and parts Boat repair Boat trailers Golf carts and parts Inboard motorboats Inboard-outdrive boats Motorcycles, motor scooters, motorbikes, mopeds, and parts Other boats, including sailboats Outboard motorboats Self-propelled golf carts and parts Snowmobiles

I-O code	Description	Products
62	Scientific and controlling instruments.	Binoculars Navigation and guidance systems
63	Ophthalmic and photographic equipment.	Still picture equipment Motion picture equipment
64	Miscellaneous manufacturing	Baby carriages and children's vehicles, except bicycles Billiard and pool tables and supplies Bowling balls Durable above ground pools Durable golf equipment, including golf clubs Durable team sports equipment Exercise equipment, including weight lifting equipment, multi-purpose home gyms, rowing machines, and exercise cycles Ice skates and roller skates, excluding clamp-on type roller skates Other durable sporting and athletic goods, including, archery, tennis, and racquetball equipment Other fabricated products Playground equipment, including swing sets, slides, seesaws, and sandboxes Snow ski and other winter sports equipment Surfboards, sailboards, water skis, and SCUBA and skindiving equipment
73C	Other business and professional services, except medical.	Camera repairs Gunsmith services Leather goods repairs Motorcycle and bicycle repairs Other repair services
81	Scrap, used and secondhand goods.	Used aircraft and aircraft engines Used boats Used motorcycles Used optical equipment Used photographic equipment and supplies Used sporting goods

91. Video and audio products, computing equipment, and musical instruments

33+34	Footwear, leather, and leather products.	Musical instrument cases
51	Computer and office equipment	Computer storage equipment, including rigid, flexible, and other disk drives Display terminals Impact computer printers, including line-type and serial type Keying equipment, including mouse devices Nonimpact printers, including laser and inkjet Personal computers, workstations, and portable computers Scanning devices, plotters, and monitors
56	Audio, video, and communication equipment.	Amateur radio communications systems Compact and video disc players Home and portable radios Home entertainment equipment kits Household television receivers, including television combinations Loudspeakers, tuners, and receivers Modems Other communications systems and equipment, except broadcast Other consumer audio and video equipment Phonograph records, prerecorded audio tapes, and compact discs Radio-phonograph-tape recorder combinations Tape recorders and players
57	Electronic components and accessories.	Earphones and headsets Home antennas Phonograph cartridges and needles
58	Miscellaneous electrical machinery and supplies.	Blank audio and video tapes Computer disks (magnetic recording media) Consumer electronic equipment Primary cells and batteries
64	Miscellaneous manufacturing	Musical instruments, parts, and accessories
71B	Real estate and royalties	Royalties on pre-recorded video tapes
73A	Computer and data processing services.	Prepackaged software
76	Amusements	Pre-recorded video tapes
81	Scrap, used and secondhand goods.	Used computer hardware, software, and supplies Used musical instruments Used television and audio equipment Used video tapes

92. Radio and television repair

72B	Personal and repair services (except auto).	Radio and television repair
-----	---	-----------------------------

I-O code	Description	Products
73C	Other business and professional services, except medical.	Television rental
93. Flowers, seeds, and potted plants		
2	Other agricultural products	Cut flowers Other nursery products Potted plants Seeds
73C	Other business and professional services, except medical.	Florists' telegraph services (FTD, etc.)
95. Motion picture theaters		
65D	Air transportation	Fees for movies shown on commercial airlines
76	Amusements	Motion picture theaters, including drive-ins
77B	Educational and social services, and membership organizations.	Movies shown by higher education establishments
96. Legitimate theaters and opera, and entertainments of nonprofit institutions (except athletics)		
76	Amusements	Dance groups and artists Live theatrical productions Other music and entertainment productions Producers of radio and television shows, except tape (tax-exempt) Services of managers and agents (tax-exempt) Symphony, opera, and chamber music organizations Ticket agencies
77B	Educational and social services, and membership organizations.	Theatrical presentations at higher education establishments
97. Spectator sports		
76	Amusements	Exhibition bowling Other sporting events, including spectator sport events held in roller and ice-skating rinks Professional or semi-professional sports events, including baseball, football, basketball, and ice hockey Racetrack admissions, including auto, horse, and dog tracks
77B	Educational and social services, and membership organizations.	Spectator sporting events held by public and private colleges and universities Spectator sporting events held by public and private elementary and secondary school systems
98. Clubs and fraternal organizations		
76	Amusements	Membership sports and recreation clubs, including equipment rental Physical fitness facilities, including gymnasiums and athletic clubs
77B	Educational and social services, and membership organizations.	Civic, social, and fraternal associations
99. Commercial participant amusements		
65A	Railroads and related services; passenger ground transportation.	Sightseeing via limousine, bus, and other ground transportation
65C	Water transportation	Marinas Sightseeing via boats and ferries
65D	Air transportation	Aircraft repair and storage Landing fees Sightseeing via planes and helicopters
70B	Insurance	Aircraft insurance
73C	Other business and professional services, except medical.	Airplane rental and leasing
76	Amusements	Amusement parks, devices, and rides Bathing beaches and swimming pools Bowling and billiards Coin-operated gambling machines Dance bands Dance studios and halls

I-O code	Description	Products
77B	Educational and social services, and membership organizations.	Gaming at gambling establishments, hotel/motel casinos, Indian reservations, and sports and recreation clubs Gymnasiums and athletic clubs Other music and entertainment presentations Other recreation and amusements Picnic grounds Public golf courses Recreational equipment rental, including rowboats, canoes, and beach chairs Riding stables Shooting galleries Tips on gaming Bowling and billiards at higher education establishments Flying instruction

100. Pari-mutuel net receipts

76	Amusements	Parimutuel betting, including dog and horse racing Off-track betting
----	------------------	---

101. Other recreational expenditures

1	Livestock and livestock products	Horses Miscellaneous animals, including cats and dogs
3	Forestry and fishery products	Game preserves Miscellaneous marine products, including turtles and frogs
4	Agricultural, forestry, and fishery services.	Pet grooming and boarding
66	Communications, except radio and TV.	Cable and other pay television services
67	Radio and TV broadcasting	Public television and radio
72A	Hotels and lodging places	Public room rental at hotels Recreational vehicle parks and campsites Sporting and recreational camps
72B	Personal and repair services (except auto).	Portrait studios
73A	Computer and data processing services.	Computer rental and leasing Information retrieval services
73C	Other business and professional services, except medical.	Miscellaneous repair services Party supplies rental and leasing, including dishes, silverware, and tables Photofinishing, including one-hour minilabs Video recorder and player rental
76	Amusements	Carnivals, circuses, and fairs Coin-operated amusement devices Gymnasiums and athletic clubs Other amusements and recreation services, including vacation tour guides and tips and government parks and camping Video tape rental
77A	Health services	Veterinary services
77B	Educational and social services, and membership organizations.	Arboreta and botanical or zoological gardens Business associations Museums and art galleries Professional membership organizations Public secondary school social (recreational) activities
79	State and local government enterprises.	Lotteries
81	Scrap, used and secondhand goods.	Used stamps and coins

103. Higher education

77B	Educational and social services, and membership organizations.	Higher education services, including public and private colleges, universities, theological seminaries, and professional schools
-----	--	--

104. Nursery, elementary, and secondary schools

77B	Educational and social services, and membership organizations.	Child daycare services Elementary and secondary education services, including parochial schools and military academies
-----	--	---

I-O code	Description	Products
105. Other private education and research		
76	Amusements	Dance schools
77B	Educational and social services, and membership organizations.	Business and secretarial schools Data processing schools Educational and charitable trusts Nonprofit research and development Other schools and educational services, including survival schools, reading schools, drama schools, and Bible schools Other vocational schools, including commercial art schools, correspondence schools, trade schools, and real estate schools Sales and services of higher education establishments incidental to educational activities
106. Religious and welfare activities		
77B	Educational and social services, and membership organizations.	Arboreta and botanical or zoological gardens Child daycare services Civic, social, and fraternal organizations Individual and family social services Job training and vocational rehabilitation services Libraries and information centers Membership organizations, including athletic associations, automobile owners' associations, and art councils Museums and art galleries Political organizations Religious and charitable trusts Religious organizations Residential care Social services, including advocacy groups and community development groups
108. Foreign travel by U.S. residents		
65C	Water transportation	International water transportation of passengers
65D	Air transportation	International air transportation, including excess baggage charges
80	Noncomparable imports	Educational expenditures by U.S. students abroad, including tuition, books, and board Travel by U.S. residents abroad, including meals, lodging, and local transportation
109. Expenditures abroad by U.S. residents		
80	Noncomparable imports	Expenditures abroad by U.S. civilians working for U.S. nondefense agencies Expenditures abroad by U.S. residents working for unaffiliated foreigners Purchases abroad by U.S. military personnel
110. Expenditures in the United States by nonresidents		
83	Rest of the world adjustment to final uses.	Expenditures by foreigners in the U.S. working for foreign governments and international organizations Expenditures by Mexican, West Indian, and Puerto Rican workers in the U.S. Expenditures by foreign ocean and air crews in the U.S. Expenditures by foreigners for medical services Foreign student's educational expenditures Travel by foreigners in the U.S.
111. Personal remittances in kind to nonresidents		
83	Rest of the world adjustment to final uses.	Donations for relief Personal gifts sent to foreigners

Appendix E

Products Included in Producers' Durable Equipment Expenditure Categories

This appendix identifies the products from the input-output (I-O) commodities making up each producers' durable equipment (PDE) expenditure category in the national income and product accounts (NIPA's). It expands information provided in supplementary table E on page M-24 of this volume.

In what follows, each PDE category is first identified by its line number and descriptor in NIPA table 5.8, "Private Purchases of Producers' Durable Equipment by Type."¹ Information on the composition of the PDE category is contained in three columns. The first column provides the number and the second column the description of each I-O commodity included in the given PDE category.² The

third column provides a list of products from the identified I-O commodity that are included in the PDE category.

For example, the first PDE category shown in the table below is "5. Computers and peripheral equipment," indicating that this PDE category corresponds to line 5, computers and peripheral equipment, in NIPA table 5.8. The first two columns identify two I-O commodities—"computer and office equipment" (I-O 51) and "computer and data processing services" (I-O 73A)—as making up this NIPA category. The third column identifies computer storage equipment and display terminals, as well as mainframes and personal computers, as being among the *products* from the *I-O commodity* "computer and office equipment" in the *NIPA PDE category* "computers and peripheral equipment."

1. Table 5.8, "Private Purchases of Producers' Durable Equipment by Type," was most recently revised and updated in the August 1998 SURVEY.

2. Transportation costs and trade margins are not included in the list of products in this appendix. Information in supplementary table E identifies the various margins and transportation costs for each NIPA PDE category.

I-O code	Description	Products
5. Computers and peripheral equipment		
51	Computer and office equipment	Computer storage equipment, including rigid, flexible, and other disk drives Disk, optical, and auxiliary storage systems for multiuser computer systems Display terminals, including graphics type Impact computer printers, including line- and serial-type Keying equipment, digitizers, light pen tablets, and other manual input devices Large-, medium-, and small-scale processing equipment ("mainframes") Nonimpact printers, including laser, inkjet, thermal, and ion deposition Optical disk drives, including CD-ROM and magneto-optical equipment Other computer peripheral equipment Other processing units Personal computers, workstations, and portable computers Remote batch terminals Scanning devices, plotters, and monitors Serial access storage equipment (tape drives) Teleprinters
73A	Computer and data processing services.	Equipment included in computer integrated systems
6. Office equipment except computers		
50	Miscellaneous machinery, except electrical.	Industrial scales Motor truck scales Parts, attachments, and accessories for scales and balances

I-O code	Description	Products
51	Computer and office equipment	Railroad track scales Retail and commercial scales Accounting, bookkeeping, and billing machines Automatic typing and word processing machines Coin and currency handling (counting, dispensing, etc.), cash registers, funds transfer, and point-of-sale devices Duplicating machines Mailing, letter handling, and addressing machines Standard typewriters, dictating, transcribing, recording, and all other office machines
73B	Legal, engineering, accounting, and related services.	Engineering services
81	Scrap, used and secondhand goods.	Used computers Used office equipment Used typewriters

7. Communication equipment

13	Ordnance and accessories	Services on complete space vehicles
38	Primary nonferrous metals manufacturing.	Insulated telephone and telegraph wire and cable
51	Computer and office equipment	Teleprinters
56	Audio, video, and communication equipment.	Aeronautical radio communications systems Amateur radio communications systems Broadcast, studio, and related electronic equipment Carrier line equipment, office and line repeaters Facsimile communications equipment (complete) Fiber optics equipment Household television receivers, including television combinations Intercommunication systems, including inductive paging systems Loudspeakers, microphones, tuners, and receivers Mobile communications systems Modems, voice frequency equipment, answering devices, and key systems Other communications systems and equipment, except broadcast Radio navigational and locational communications systems Railway signals and other railroad signal systems Telephone sets Telephone switching and switchboard equipment Vehicular and pedestrian traffic control equipment
58	Miscellaneous electrical machinery and supplies.	Electronic teaching machines, teaching aids, trainers, and simulators Laser systems and equipment, except communication Other electronic equipment Ultrasonic equipment (except medical and dental)
62	Scientific and controlling instruments.	Search, detection, navigation, and guidance systems
66	Communications, except radio and TV.	Telegraph equipment installation Telephone equipment installation
73B	Legal, engineering, accounting, and related services.	Engineering services
81	Scrap, used and secondhand goods.	Used communication equipment Used TVs

8. Instruments

62	Scientific and controlling instruments.	Analytical instruments Anesthesia apparatus, blood transfusion equipment, and mechanical therapy appliances Breathing devices, excluding anesthetic apparatus Continuous process instruments for on-steam gas and liquid analysis Counting devices, excluding motor vehicle instruments Dental laboratory equipment and supplies Dental professional equipment and hand instruments Drafting, photogrammetric, and geodetic equipment Electronic systems, industry computers, and all other industrial process instruments Flow and liquid level instruments Gas meters and liquid meters Hospital furniture, excluding beds and chairs Laboratory apparatus and furniture Metabolism, blood pressure, optical diagnostic, and other diagnostic equipment Nuclear radiation detection and monitoring instruments Other surgical and medical instruments and appliances Patient transport devices and wheelchairs Physical properties and kinematic testing and inspection equipment Pneumatic systems, including all system-type control, display, and computing systems Pressure (gauge, absolute vacuum) and draft instruments
----	---	---

I-O code	Description	Products
73B	Legal, engineering, accounting, and related services.	Repair of analytical instruments Repair of surgical and therapeutic appliances Seismic instruments and all other geophysical instruments and equipment Surgical instruments, orthopedic instruments, and eye, ear, nose, and throat instruments Surveying instruments Temperature and humidity instruments Therapeutic appliances, including hydrotherapy devices Engineering services
81	Scrap, used and secondhand goods.	Used instruments Used medical equipment

9. Photocopy and related equipment

62	Scientific and controlling instruments.	Optical test and inspection equipment, including microscopes Telescopes and other astronomical equipment
63	Ophthalmic and photographic equipment.	Microfilming, blueprinting, and whiteprinting equipment Motion picture equipment, including projection screens and processing equipment Photocopying equipment Repair of photographic equipment Still picture equipment, including cameras, projectors, and commercial finishing equipment
73B	Legal, engineering, accounting, and related services.	Engineering services
81	Scrap, used and secondhand goods.	Used photographic equipment

11. Fabricated metal products

5+6	Metallic ores mining	Processed uranium
27A	Industrial and other chemicals ...	Conversion, enrichment, and fabrication of uranium concentrates in government-owned, contractor-operated establishments
37	Primary iron and steel manufacturing.	Primary metal products contract work
39	Metal containers	Metal barrels, including milk shipping and delivery, and beer barrels
40	Heating, plumbing, and fabricated structural metal products.	Air-conditioning ducts and stove pipe Air receiver tanks Bins and vats Boiler shops contract work Electronic enclosures Gas cylinders Heat exchangers and steam condensers (except for nuclear applications) Liquefied petroleum gas tanks Metal tanks (nonpressure) Metal tanks and vessels (pressure) Nuclear reactor steam supply systems Other pressure tanks (including anhydrous ammonia tanks) Restaurant and hotel kitchen sheet metal equipment Shielding for use in nuclear reactor buildings
42	Other fabricated metal products	Circular saw blades (metal working) Fabricated metal products contract work Fabricated metal products, including safes, vaults, steel boxes, and metal ladders Fabricated pipe and fittings Industrial valves, excluding water, nuclear, and solenoid Metal fittings, flanges, and unions for piping systems Nuclear valves (n-stamp only) Valves for water works, except fire hydrants Woodworking power saw blades
46	Materials handling machinery and equipment.	Overhead traveling cranes, hoists, and monorail systems contract work
73B	Legal, engineering, accounting, and related services.	Engineering services

12. Engines and turbines

43	Engines and turbines	Diesel, semi-diesel, and dual-fuel engines Gasoline and gas-gasoline engines Installation of turbines and turbine generator sets Outboard motors Piston-type natural gas engines, except turbines, including LPG engines Wind, steam, hydraulic, gas turbines and turbine generator sets
----	----------------------------	---

I-O code	Description	Products
73B	Legal, engineering, accounting, and related services.	Engineering services
13. Metalworking machinery		
47	Metalworking machinery and equipment.	Assembly machines Boring machines Drilling machines Gas welding and cutting equipment Gear cutting machines Grinding, polishing, buffing, honing, and lapping machines Industrial molds Installation of metal cutting and metal forming machine tools Lathes Metalworking presses Milling machines Other metal cutting and metal forming machine tools Other metalworking machinery Power driven hand tools, electric, pneumatic, hydraulic, power actuated, and engine driven Punching and shearing machines and bending and forming machines Rebuilt metal cutting and metal forming machine tools Repair of metal cutting machine tools Rolling mill machinery Soldering equipment Special dies and tools, die sets, jigs, and fixtures
73B	Legal, engineering, accounting, and related services.	Engineering services
81	Scrap, used and secondhand goods.	Used metalworking machinery
14. Special industry machinery, n.e.c.		
32	Rubber and miscellaneous plastics products.	Roll coverings and printers' blankets
42	Other fabricated metal products	Machine tools for woodcutting
48	Special industry machinery and equipment.	Ammunition and explosive loading machinery Automotive maintenance equipment, except handtools Cement making machinery Chemical manufacturing machinery and equipment Clay products forming equipment Concrete products forming equipment Cotton ginning machinery Electric battery manufacturing machinery Electroplating and metal finishing equipment, excluding rolling mill Food products machinery Foundry machinery and equipment, excluding patterns and molds Glass making machinery and equipment Industrial sewing machines, excluding shoe sole stitching machines Installation of food products machinery Installation of printing trades machinery Installation of special industry machinery, n.e.c. Installation of textile machinery Machines for working stone, ceramics, or like materials including glass Other special industry machinery Paper industries machinery Petroleum refining machinery Plastics working machinery and equipment, excluding patterns and molds Printed circuit board manufacturing machinery, except testing Printing trades machinery Repair of paper industries machinery Repair of printing trades machinery Repair of textile machinery Repair of woodworking machinery Rubber working machinery and equipment, excluding tire molds Semiconductor manufacturing equipment Textile machinery, including parts and attachments Tobacco processing machinery Woodworking machinery, including parts and attachments
49	General industrial machinery and equipment.	Installation of packaging machinery Packing, packaging, and bottling machinery
52	Service industry machinery	Services on commercial laundry equipment
58	Miscellaneous electrical machinery and supplies.	Other electrical products
73B	Legal, engineering, accounting, and related services.	Engineering services

I-O code	Description	Products
81	Scrap, used and secondhand goods.	Used food processing machinery and equipment Used special industry machinery

15. General industrial, including materials handling, equipment

44+45	Farm, construction, and mining machinery.	Automobile hoists
46	Materials handling machinery and equipment.	Automatic stacking machines Bulk material handling conveyors and systems, except hoists and farm elevators Hoists Industrial trucks, tractors, and mobile straddle carriers and cranes Installation of conveyors and conveying equipment Unit handling conveyors and conveying systems, except hoists and farm elevators
49	General industrial machinery and equipment.	Air and gas compressors and vacuum pumps Centrifugal blowers and fans Dust collection and air-purification equipment for industrial gas cleaning systems Electric industrial furnaces, ovens, and kilns Electrical heating equipment for industrial use Electrostatic precipitation equipment Filters and strainers, except fluid power Filters for hydraulic and pneumatic fluid power systems Fuel-fired industrial furnaces, ovens, and kilns High-frequency induction and dielectric heating equipment Hot water heating circulator pumps, assembled pump units, and other pumps Industrial pumps, except fluid power pumps Industrial robots and attachments Industrial spraying equipment Other general industrial machinery Packing, packaging, and bottling machinery Pump drivers Repair of general industrial machinery Repair of packaging machinery
50	Miscellaneous machinery, except electrical.	Fluid power pumps and motors
73B	Legal, engineering, accounting, and related services.	Engineering services
81	Scrap, used and secondhand goods.	Used general industry equipment

16. Electrical transmission, distribution, and industrial apparatus

47	Metalworking machinery and equipment.	Arc welding machines, accessories, and components Repair of welding apparatus Resistance welder electrodes, accessories, and components
53	Electrical industrial equipment and apparatus.	Capacitors for industrial use Commercial, institutional, and industrial general-purpose transformers Controls for adjustable speed drives Definite-purpose contractors and starters Fluorescent lamp ballasts and specialty transformers Fractional horsepower motors Integral horsepower motors and generators Marine and navy auxiliary controls Metal mill, crane, and hoist controls Miscellaneous electrical equipment for industrial use Motion controllers Motor generator sets Other general industrial controls Power and distribution transformers Power circuit breakers Power regulators, boosters, and other transformers Prime mover generator sets, except steam or hydraulic turbine Programmable controllers and other specific-purpose controllers Rectifying apparatus, except battery chargers Rheostats and resistors Switchgear excluding control panels, relays, low-volt assemblies
62	Scientific and controlling instruments.	Instruments to measure electricity Repair of instruments to measure electricity
73B	Legal, engineering, accounting, and related services.	Engineering services

18. Trucks, buses, and truck trailers

59A	Motor vehicles (passenger cars and trucks).	Buses and firefighting vehicles Light trucks, vans, and sport utility vehicles Trucks and truck tractors
-----	---	--

I-O code	Description	Products
59B	Truck and bus bodies, trailers, and motor vehicles parts.	Repair of truck and bus bodies Repair of truck trailers Truck trailers and chassis Truck, bus, and other vehicle bodies (except passenger car) for sale separately
81	Scrap, used and secondhand goods.	Used trucks and motor vehicles, excluding cars
19. Autos		
59A	Motor vehicles (passenger cars and trucks).	Passenger cars
81	Scrap, used and secondhand goods.	Ferrous scrap Used auto parts Used passenger cars
20. Aircraft		
22+23	Furniture and fixtures	Seats for aircraft
60	Aircraft and parts	Aircraft engines for civilian aircraft Civilian aircraft Modification, conversion, and overhaul of aircraft for civilian customers Other aeronautical services on complete aircraft
62	Scientific and controlling instruments.	Aeronautical and navigational instruments, except aircraft engine instruments
81	Scrap, used and secondhand goods.	Used aircraft and aircraft engines
21. Ships and boats		
61	Other transportation equipment	Inboard motorboats Inboard-outdrive boats Nonpropelled ships Other boats, including canoes Outboard motorboats, including commercial Sailboats Self-propelled ships, nonmilitary Ship and boat repair, nonmilitary
81	Scrap, used and secondhand goods.	Used vessels
22. Railroad equipment		
61	Other transportation equipment	Locomotives, new and rebuilt Other work and service railroad vehicles Passenger and freight train cars, new Rebuilt passenger and freight train cars Self-propelled and nonself-propelled streetcars, subway cars, rapid transit cars, and trolley buses
73B	Legal, engineering, accounting, and related services.	Engineering services
81	Scrap, used and secondhand goods.	Used railroad equipment
24. Furniture and fixtures		
22+23	Furniture and fixtures	Bedroom furniture, including cots and bed frames Chairs and seats, including theater, auditorium, and institutional Church pews and other church furniture Dining room and kitchen furniture Dual-purpose sleep furniture Fixtures for stores, banks, and offices, and other miscellaneous fixtures Folding tables, including banquet tables Hospital beds Infants' and children's furniture Infants' high chairs and car seats Library furniture Living room, library, family room, and den furniture Mattresses, including crib, and bedsprings Office furniture Other furniture and fixtures Other household furniture Other public building furniture Partitions (excluding accordion and folding-type doors) Porch, lawn, and other outdoor furniture Reed and rattan furniture (including willow, wicker, and cane)

I-O code	Description	Products
		Restaurant, cafeteria, and bar furniture and fixtures School furniture Shelving and lockers Sleep system ensembles, excluding water beds Storage racks and accessories Unpainted and ready-to-assemble furniture Upholstered household furniture Venetian blinds Window shades and accessories
73B	Legal, engineering, accounting, and related services.	Engineering services
81	Scrap, used and secondhand goods.	Used building fixtures Used household furniture Used office furniture

25. Tractors

44+45	Farm, construction, and mining machinery.	Contractors' off-highway wheel tractors Crawler tractors Farm-type wheel tractors (2- and 4-wheel drive) Lawn and garden tractors
81	Scrap, used and secondhand goods.	Used construction tractors Used garden tractors

26. Agricultural machinery, except tractors

44+45	Farm, construction, and mining machinery.	Consumer nonriding garden equipment Farm machinery and equipment, excluding tractors
73B	Legal, engineering, accounting, and related services.	Engineering services
81	Scrap, used and secondhand goods.	Used agricultural machinery

27. Construction machinery, except tractors

44+45	Farm, construction, and mining machinery.	Mixers, pavers, and related equipment Other construction machinery and equipment Power cranes, draglines, and shovels, including surface mining equipment, and attachments Scrapers, graders, rollers, and off-highway equipment Tractor shovel loaders
73B	Legal, engineering, accounting, and related services.	Engineering services
81	Scrap, used and secondhand goods.	Used construction equipment (excluding tractors)

28. Mining and oilfield machinery

8	Crude petroleum and natural gas.	Installation of oil and gas field production equipment
44+45	Farm, construction, and mining machinery.	Mining machinery Oil and gas field derricks and well surveying machinery Oil and gas field production machinery and equipment, including equipment for surface, sub-surface, and subsea, and rod lifting equipment Other oil and gas field drilling machine and equipment Portable drilling rigs and parts Rotary drilling surface equipment
49	General industrial machinery and equipment.	Oil-well and oil-field pumps Subsurface pumps for oil-well pumping
73B	Legal, engineering, accounting, and related services.	Engineering services
81	Scrap, used and secondhand goods.	Used mining equipment

29. Service industry machinery

50	Miscellaneous machinery, except electrical.	Amusement park equipment, including ferris wheels Installation of amusement park equipment
52	Service industry machinery	Automatic merchandising machines Commercial and industrial floor and carpet cleaning equipment Commercial and industrial vacuum cleaners Commercial car, bus, and truck washing equipment

I-O code	Description	Products
		Commercial cooking and food-warming equipment Commercial laundry, dry cleaning, and pressing machinery and equipment Commercial refrigerators and related equipment Compressors, including those over 10hp and ammonia refrigerant Dishwashing machines Garbage and trash compactors Heat transfer equipment, including ice making machines High-pressure cleaning and blasting equipment Measuring and dispensing pumps, including gasoline dispensing pumps and grease guns Other industrial and commercial service machines Other refrigeration and air-conditioning equipment, including soda fountain equipment and beer dispensing equipment Refrigeration condensing units (complete) Room air-conditioners and dehumidifiers Sewer pipe and drain cleaning equipment Water softeners
73B	Legal, engineering, accounting, and related services.	Engineering services
81	Scrap, used and secondhand goods.	Used service industry equipment

30. Electrical equipment, n.e.c.

54	Household appliances	Attachments and cleaning tools for central vacuum systems Ceiling fans Coin-operated laundry equipment Electric, gas, and other ranges, ovens, and cooking equipment, including microwaves Nonelectric water heaters, indirect-fired Other small electromechanical and electrothermal appliances Portable air purifiers, dehumidifiers, and humidifiers Portable air space heaters Range hoods, oven hoods, and other ventilating and exhaust fans Refrigerators, including combination refrigerator-freezers Small electric household cooking appliances Vacuum cleaners Window, desk, and wall bracket fans
55	Electric lighting and wiring equipment.	Choke coils Electric lighting fixtures, commercial, industrial, and institutional Fluorescent lighting equipment, including technical and processing equipment Health lamp fixtures Lightning arrestors Residential lighting fixtures, portable
58	Miscellaneous electrical machinery and supplies.	Optical disks Other electrical products Rigid disks (magnetic recording media) Storage batteries for industrial trucks
62	Scientific and controlling instruments.	Electromedical equipment X-ray apparatus and tubes, including industrial, scientific, medical, and dental
73B	Legal, engineering, accounting, and related services.	Engineering services
81	Scrap, used and secondhand goods.	Used electrical equipment Used household appliances

31. Other nonresidential equipment

17	Miscellaneous textile goods and floor coverings.	Carpets, rugs, and artificial grass Felt carpet and rug padding
20+21	Lumber and wood products	Miscellaneous wooden products
32	Rubber and miscellaneous plastics products.	Foam rubber and sponge carpet and rug cushions Plastics foam carpet and rug cushions
44+45	Farm, construction, and mining machinery.	Consumer nonriding lawn, garden, and snow equipment Farm machinery and equipment excluding tractors Turf and grounds care equipment
61	Other transportation equipment	All-terrain vehicles Automobile and light truck trailers Motorcycles, including three-wheel, motor scooters, motorbikes, and mopeds Self-propelled golf carts and in-plant person carriers Self-propelled snowmobiles Travel trailers and fold down camping trailers
64	Miscellaneous manufacturing	Barber and beauty shop furniture and equipment Billiard and pool tables and supplies Bowling alleys, balls, and supplies Chemical fire-extinguishing equipment

I-O code	Description	Products
		Coin-operated amusement machines Electric signs Gymnasium and exercise equipment Ice skates, shoe and roller rink skates, excluding clamp-on type roller skates Nonelectric signs Other musical instruments Pianos and organs Playground equipment, heavy-duty Snow skis and other winter sports equipment Surfboards, sailboards, water skis, and SCUBA and skindiving equipment Team sports equipment, including baseball, football, and soccer
73B	Legal, engineering, accounting, and related services.	Engineering services
81	Scrap, used and secondhand goods.	Used kitchenware Used lawn and garden equipment Used tools
32. Sale of equipment scrap, excluding autos		
81	Scrap, used and secondhand goods.	Ferrous scrap Scrap other than ferrous metal
33. Residential (landlord durables)		
17	Miscellaneous textile goods and floor coverings.	Carpets, rugs, and artificial grass Felt carpet and rug padding
22+23	Furniture and fixtures	Bedroom furniture, including cots and bed frames Dining room and kitchen furniture Dual-purpose sleep furniture Infants' and children's furniture Infants' high chairs and car seats Living room, library, family room, and den furniture Mattresses, including crib, and bedsprings Other household furniture Reed and rattan furniture (including willow, wicker, and cane) Sleep system ensembles, excluding water beds Upholstered household furniture
32	Rubber and miscellaneous plastics products.	Foam rubber and sponge carpet and rug cushions Plastics foam carpet and rug cushions
54	Household appliances	Dishwashing machines Electric, gas, and other ranges, ovens, and cooking equipment, including microwaves Refrigerators, including combination refrigerator-freezers Small electric household cooking appliances Water heaters, electric and nonelectric Window, desk, and wall bracket fans
56	Audio, video, and communication equipment.	Home and portable radios and radio-phonograph-tape recorder combinations Household television receivers, including television combinations

Appendix F

Mathematical Derivation of the Total Requirements Tables

This appendix discusses the matrix algebra underlying the derivation of the I-O total requirements tables.¹ The following definitions are used:

q is a column vector in which each entry shows the total amount of the output of a commodity.

U is a commodity-by-industry matrix in which the column shows for a given industry the amount of each commodity it uses, including noncomparable imports (I-O 80) and scrap and used and secondhand goods (I-O 81). (Hereafter, I-O 81 is designated as scrap.) This is the intermediate portion of the use table.

i is a unit, or summation, vector; all entries are 1's.

e is a column vector in which each entry shows the total sales to final users for a commodity (from the use table).

g is a column vector in which each entry shows the total amount of an industry's output, including its production of scrap.

V is an industry-by-commodity matrix in which each column shows for a given commodity the amount produced in each industry. V is the make table, adjusted to show only zero entries in the column for scrap. (Scrap is removed so that demand for it does not generate output in the industries where it originated.)

h is a column vector in which each entry shows the total amount of an industry's production of scrap. (The estimate of h is contained in column 81 of the make table.)

B is a commodity-by-industry matrix in which each entry in a column shows the amount of a commodity that an industry used per dollar of its output. Matrix B is derived from matrix U .

$\hat{}$ is a symbol that, when placed over a vector, indicates a square matrix in which the elements of the vector

appear in the main diagonal cells and zeros appear in the other cells.

D is an industry-by-commodity matrix in which each entry in a column shows the share of total output of a given commodity produced in each industry. This matrix is the market share matrix and is derived from matrix V .

p is a column vector in which each entry shows the ratio of the value of scrap produced in an industry to that industry's total output.

I is the identity matrix, a square matrix in which 1's appear in the main diagonal cells and zeros appear in the other cells.

W is an industry-by-commodity matrix in which each entry in a column shows the share of total output of a given commodity produced in each industry, with each industry's commodity share adjusted for scrap produced by the industry. This matrix is the transformation matrix and is derived from matrix D and vector p .

The following are identities:

$$(1) \quad q = Ui + e; \text{ and}$$

$$(2) \quad g = Vi + h.$$

The following are assumptions:

First, inputs are required in proportion to output, and the proportions are the same for an industry's primary and secondary products. This is the industry technology assumption.

$$(3) \quad U = B\hat{g}.$$

Second, each commodity (other than scrap) is produced by the various industries in fixed proportions.

$$(4) \quad V = D\hat{q}.$$

1. The notation and derivation of the tables follow the System of National Accounts recommended by the United Nations. See *A System of National Accounts*, Studies in Methods, Series F, No. 2, Rev. 3 (New York: United Nations, 1968); also, R. Stone, M. Bacharach, and J. Bates, "Input-Output Relationships, 1951-1966," *A Programme for Growth*, Vol. 3 (London: Chapman and Hall, 1963).

Third, scrap output in each industry is proportional to total output of the industry.

$$(5) \quad h = \hat{p}g.$$

The model expressed in equations (1) through (5) thus involves three constants (B , D , and p) and six variables (U , V , h , e , q , and g). The model solution is derived as follows.

Substituting (3) into (1) gives

$$(6) \quad q = Bg + e.$$

Substituting (4) into (2) gives

$$(7) \quad g - h = Dq.$$

Substituting (5) into (7) and solving for g gives

$$(8) \quad \begin{aligned} g - \hat{p}g &= Dq, \\ (I - \hat{p})g &= Dq, \text{ and} \\ g &= (I - \hat{p})^{-1}Dq. \end{aligned}$$

Let $(I - \hat{p})^{-1}D = W$; then

$$(9) \quad g = Wq.$$

Substituting (9) into (6) and solving for q gives

$$(10) \quad \begin{aligned} q &= BWq + e, \\ (I - BW)q &= e, \text{ and} \\ q &= (I - BW)^{-1}e. \end{aligned}$$

Substituting (10) into (9) gives

$$(11) \quad g = W(I - BW)^{-1}e.$$

$(I - BW)^{-1}$ is the commodity-by-commodity total requirements matrix, which shows the commodity output required per dollar of each commodity delivered to final users.²

$W(I - BW)^{-1}$ is the industry-by-commodity total requirements matrix, which shows the industry output required per dollar of each commodity delivered to final users.³

2. Tables are prepared at detailed and summary levels. For the summary tables, the adjustments for secondary production were made at the detailed level and then aggregated before the total requirements tables were calculated.

3. See the previous footnote.

Table 3.1.—Commodity-by-Industry

(Direct requirements per dollar)

Commodity number	For the composition of inputs to an industry, read the column for that industry	Aircraft and parts	Other transportation equipment	Scientific and controlling instruments	Ophthalmic and photographic equipment	Miscellaneous manufacturing	Railroads and related services; passenger ground transportation	Motor freight transportation and warehousing	Water transportation	Air transportation	Pipelines, freight forwarders, and related services
	Industry number	60	61	62	63	64	65A	65B	65C	65D	65E
1	Livestock and livestock products					0.00007					
2	Other agricultural products	.00001				.00082		.00001	.00009	.00001	
3	Forestry and fishery products					.00034			.00009		
4	Agricultural, forestry, and fishery services	.00062	.00047	.00048	.00033	.00019	.00002	.00001			
5+6	Metallic ores mining	.00030		.00013		.00027					
7	Coal mining	.00015	.00020	.00030	.00079	.00005			.00028		
8	Crude petroleum and natural gas										.00247
9+10	Nonmetallic minerals mining					.00012					
11	New construction										
12	Maintenance and repair construction	.00781	.00357	.00591	.00617	.00457	.04421	.00441	.00092	.00254	.01708
13	Ordinance and accessories										.00015
14	Food and kindred products	.00007		.00052		.00218			.00256	.00245	
15	Tobacco products										
16	Broad and narrow fabrics, yarn and thread mills	.00097		.00301		.01118				.00001	
17	Miscellaneous textile goods and floor coverings	.00006	.00310	.00525	.00004	.00070		.00005	.00136		
18	Apparel	.00006		.00017		.00438	.00041	.00002	.00194	.00009	
19	Miscellaneous fabricated textile products	.00141	.00413	.00001		.00109		.00007	.00311	.00006	.00226
20+21	Lumber and wood products	.00020	.01333	.00070		.01193		.00020	.00009	.00002	.00488
22+23	Furniture and fixtures	.00054	.00120	.00048		.00051					
24	Paper and allied products, except containers	.00026	.00027	.00361	.03713	.00675	.00039	.00036		.00033	.00060
25	Paperboard containers and boxes	.00015	.00017	.00454	.01003	.01888	.00007	.00058		.00003	.00232

Table 4.—Commodity-by-Commodity

(Total requirements, direct and indirect, per dollar)

Commodity number	Each entry represents the output required, directly and indirectly, of the commodity named at the beginning of the row for each dollar of delivery to final demand of the commodity named at the head of the column	Livestock and livestock products	Other agricultural products	Forestry and fishery products	Agricultural, forestry, and fishery services	Metallic ores mining	Coal mining	Crude petroleum and natural gas	Non-metallic minerals mining	New construction	Maintenance and repair construction	Ordinance and accessories
	Commodity number	1	2	3	4	5+6	7	8	9+10	11	12	13
1	Livestock and livestock products	1.20722	0.00324	0.02212	0.03306	0.00077	0.00058	0.00048	0.00056	0.00077	0.00080	0.00062

Table 4.—Commodity-by-Commodity

[Total requirements, direct and indirect, per dollar]

Commodity number	Each entry represents the output required, directly and indirectly, of the commodity named at the beginning of the row for each dollar of delivery to final demand of the commodity named at the head of the column	Petroleum refining and related products	Rubber and miscellaneous plastics products	Footwear, leather, and leather products	Glass and glass products	Stone and clay products	Primary iron and steel manufacturing	Primary non-ferrous metals manufacturing	Metal containers	Heating, plumbing, and fabricated structural metal products	Screw machine products and stampings	Other fabricated metal products
	Commodity number	31	32	33+34	35	36	37	38	39	40	41	42
1	Livestock and livestock products	0.00086	0.00155	0.04831	0.00075	0.00089	0.00069	0.00082	0.00094	0.00073	0.00070	0.00075

Table 4.—Commodity-by-Commodity

[Total requirements, direct and indirect, per dollar]

Commodity number	Each entry represents the output required, directly and indirectly, of the commodity named at the beginning of the row for each dollar of delivery to final demand of the commodity named at the head of the column	Other transportation equipment	Scientific and controlling instruments	Ophthalmic and photographic equipment	Miscellaneous manufacturing	Railroads and related services; passenger ground transportation	Motor freight transportation and warehousing	Water transportation	Air transportation	Pipelines, freight forwarders, and related services	Communications, except radio and TV	Radio and TV broadcasting

Table 4.—Commodity-by-Commodity Total Requirements—Continued

[Total requirements, direct and indirect, per dollar of delivery to final demand, at producers' prices]

Commodity number	Each entry represents the output required, directly and indirectly, of the commodity named at the beginning of the row for each dollar of delivery to final demand of the commodity named at the head of the column	Health services	Educational and social services, and membership organizations	Federal Government enterprises	State and local government enterprises	Non-comparable imports	Scrap, used, and second-hand goods	General government industry	Rest-of-the-world adjustment to final uses	Household industry	Inventory valuation adjustment
	Commodity number	77A	77B	78	79	80	81	82	83	84	85
1	Livestock and livestock products	0.00291	0.00400	0.00072	0.00066						
2	Other agricultural products	.00294	.00377	.00074	.00233

SUMMARY TABLES

37

Table 5.—Industry-by-Commodity Total Requirements

[Total requirements, direct and indirect, per dollar of delivery to final demand, at producers' prices]

Industry number	Each entry represents the output required, directly and indirectly, of the industry named at the beginning of the row for each dollar of delivery to final demand of the commodity named at the head of the column	Livestock and livestock products	Other agricultural products	Forestry and fishery products	Agricultural, forestry, and fishery services	Metallic ores mining	Coal mining	Crude petroleum and natural gas	Non-metallic minerals mining	New construction	Maintenance and repair construction
	Commodity number	1	2	3	4	5+6	7	8	9+10	11	12
1	Livestock and livestock products	1.20919	0.00459	0.04302	0.05040	0.00085	0.00063	0.00053	0.00060	0.00098	0.00106
2	Other agricultural products	.33378	1.04309	.21804	.16320	.00202	.00130	.00107	.00106	.00569	.00644
3	Forestry and fishery products	.00240	.00097	.82943	.00160	.00098	.00060	.00043	.00043	.00541	.00666
4	Agricultural, forestry, and fishery services	.07597	.07384	.17420	.96687	.00274	.00138	.00168	.00112	.00484	.00578

Table 5.—Industry-by-Commodity

[Total requirements, direct and indirect, per dollar]

Industry number	Each entry represents the output required, directly and indirectly, of the industry named at the beginning of the row for each dollar of delivery to final demand of the commodity named at the head of the column	Ordnance and accessories	Food and kindred products	Tobacco products	Broad and narrow fabrics, yarn and thread mills	Miscellaneous textile goods and floor coverings	Apparel	Miscellaneous fabricated textile products	Lumber and wood products	Furniture and fixtures	Paper and allied products, except containers	Paper-board containers and boxes
	Commodity number	13	14	15	16	17	18	19	20+21	22+23	24	25

Table 5.—Industry-by-Commodity

[Total requirements, direct and indirect, per dollar]

Industry number	Each entry represents the output required, directly and indirectly, of the industry named at the beginning of the row for each dollar of delivery to final demand of the commodity named at the head of the column	Radio and TV broadcasting	Electric services (utilities)	Gas production and distribution (utilities)	Water and sanitary services	Wholesale trade	Retail trade	Finance	Insurance	Owner-occupied dwellings	Real estate and royalties	Hotels and lodging places
	Commodity number	67	68A	68B	68C	69A	69B	70A	70B	71A	71B	72A
1	Livestock and livestock products	0.00384	0.00044	0.00057	0.00074	0.00086	0.00068	0.0005C	0.00076	0.00050	0.00066	0.00148
